

# Tension Leg Platform Design Optimization for Vortex Induced Vibration

## **Contents**

I. Introduction

II. Preliminary Research Phase: choosing an existing vessel and field

III. Fundamental Design Areas

A. General Arrangement and Overall Hull System Design

B. Weight, Buoyancy and Stability

C. Global Loading, Strength, and Structural Design

D. Risk Assessment

IV. Specialized Design Areas

A. Hydrodynamics of Motions and Loading

1). Tendon Design: VIV Analysis and VIVA Runs

2). Dynamic Response Estimates

B. Structural Analysis: Finite Element Methods

V. Conclusions

VI. Appendices

Appendix 1: Weight Spreadsheet

Appendix 2: Hydrostatics MATLAB Code

Appendix 3: Hydrodynamics MATLAB Code

Appendix 4: Bretschneider Spectra and Vessel Transfer Functions

Appendix 5: Vessel Weights and Design Parameters

Appendix 6: Current Profiles

Appendix 7: VIVA: input files, output files, and plots
