# Motivation

- Mobile robot planning
- Resource scheduling
- laying out a silicon chip
- interpret a visual image
- manufacturing processes
- design of airline timetable
- radio frequency planning

# Quick Definition of a CSP

---

## Constraint Satisfaction Problem (I,V,C)

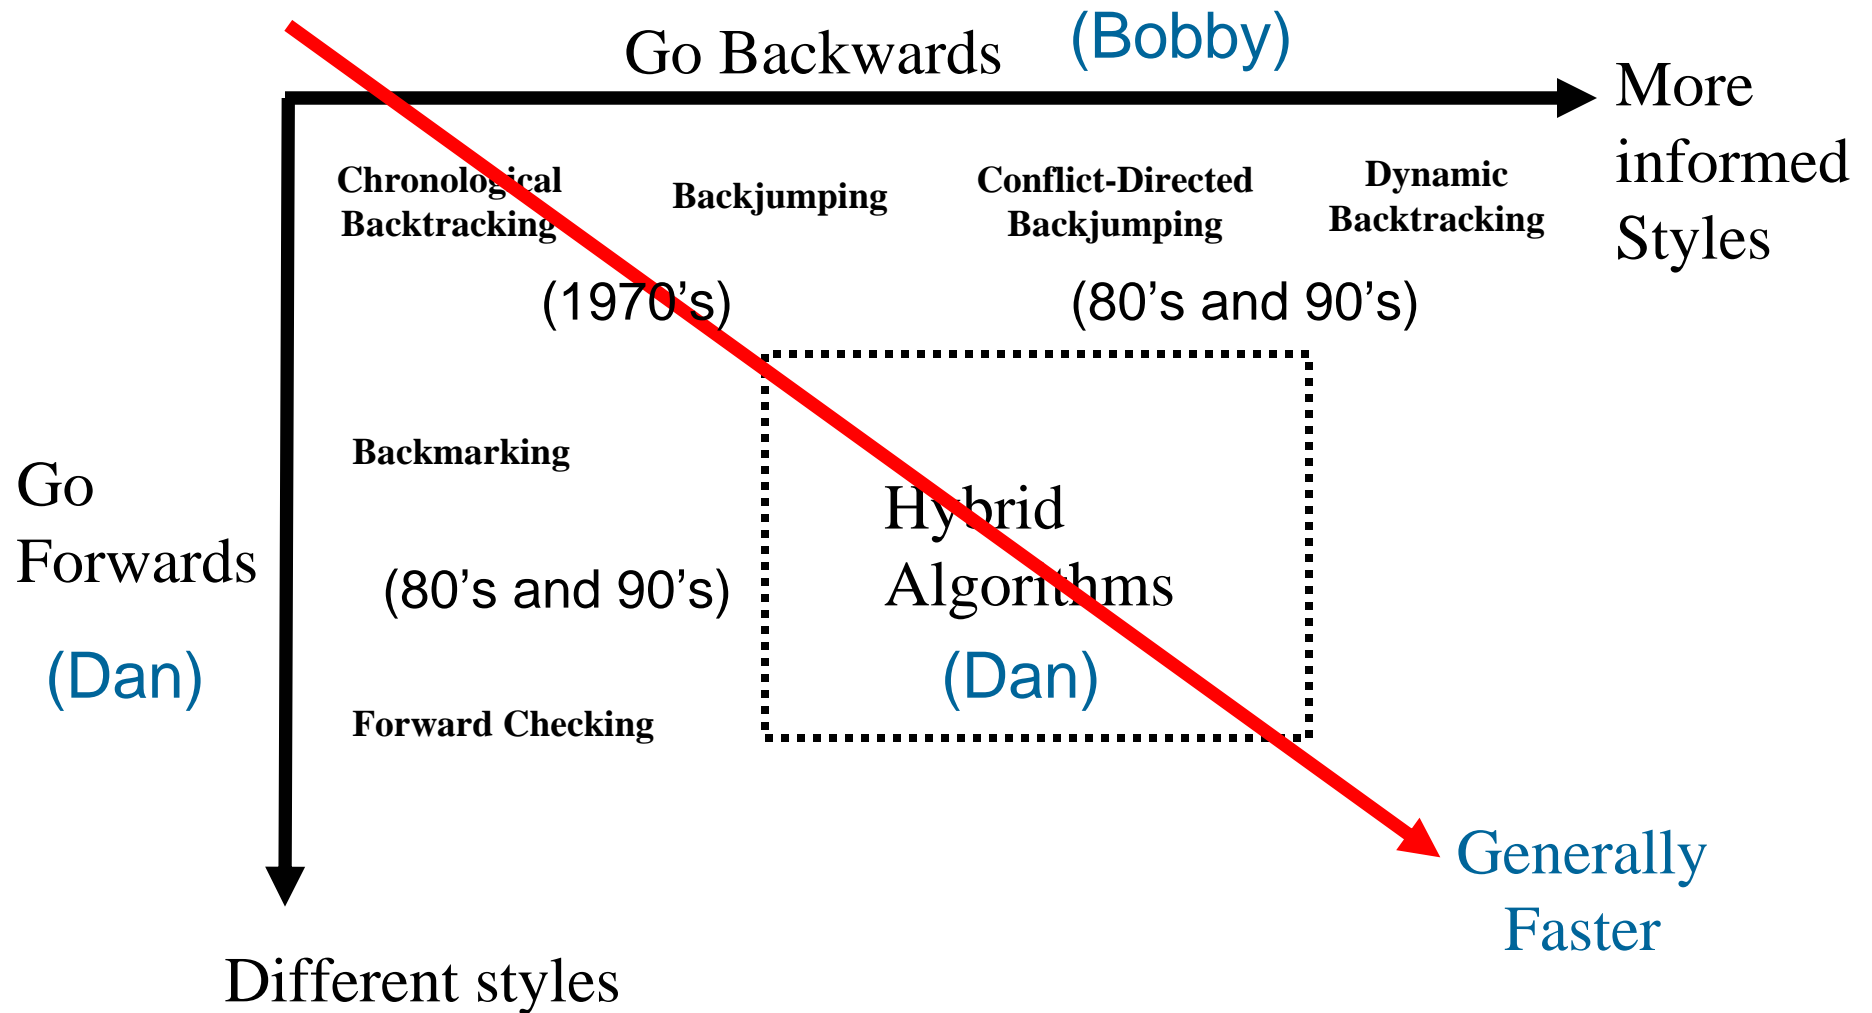

- I , a set of variables
- $V_i$ , a set of possible values for each variable in I.
- C, a set of  $C_{ij}$  constraints, each a binary relation

$$C = \{C_{1,1} \dots C_{1,n} \ C_{2,1} \dots C_{2,n} \dots C_{n,n}\}$$

A Solution is found when each variable I is assigned a value from it's domain  $V_i$  and the set of all Constraints {C} is satisfied.

# Quick Definition of a CSP

---

Constraint Satisfaction Problem (I,V,C)

- I , a set of variables
- $V_i$ , a set of possible values for each variable in I.
- C, a set of  $C_{ij}$  constraints, each a binary relation  
 $C = \{C_{1,1} \dots C_{1,n} \ C_{2,1} \dots C_{2,n} \dots C_{n,n}\}$

A Solution is found when each variable I is assigned a value from it's domain  $V_i$  and the set of all Constraints {C} is satisfied.

$I = \{A,B,C,D,E\}$

$V_i = \{\text{red,yellow,blue}\}$

$C_{ij} = (\text{no neighbor can be the same color})$

---

# Simple Example Problem

---

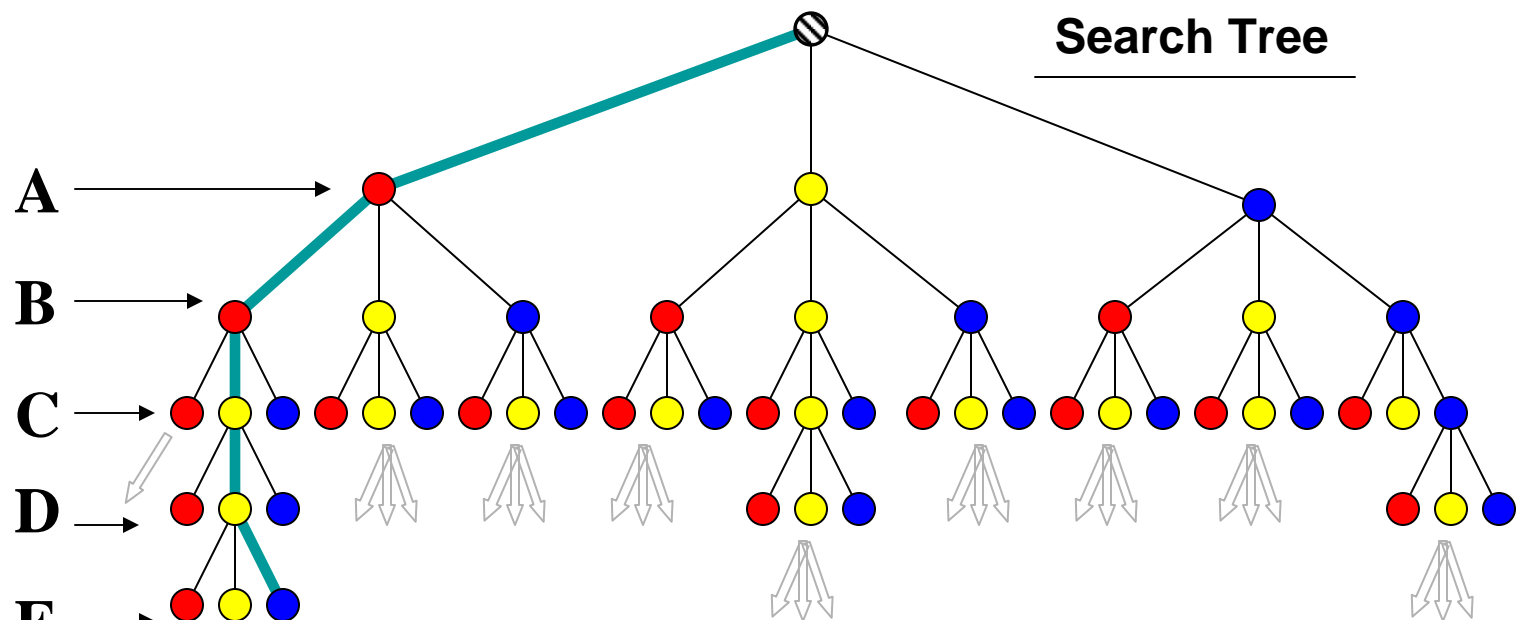

# Search Tree Representation of a CSP

## Simple Map Coloring Example

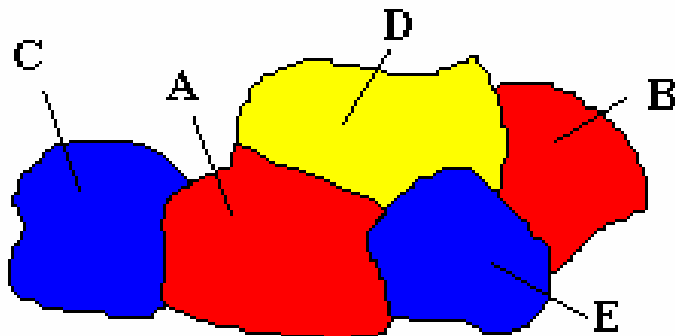

- Variables are assigned values according to an instantiation order
- The search tree grows downward as until each variable is assigned a value from its domain.
- Dynamic Backtracking allows a dynamic instantiation order

## Instantiation Order

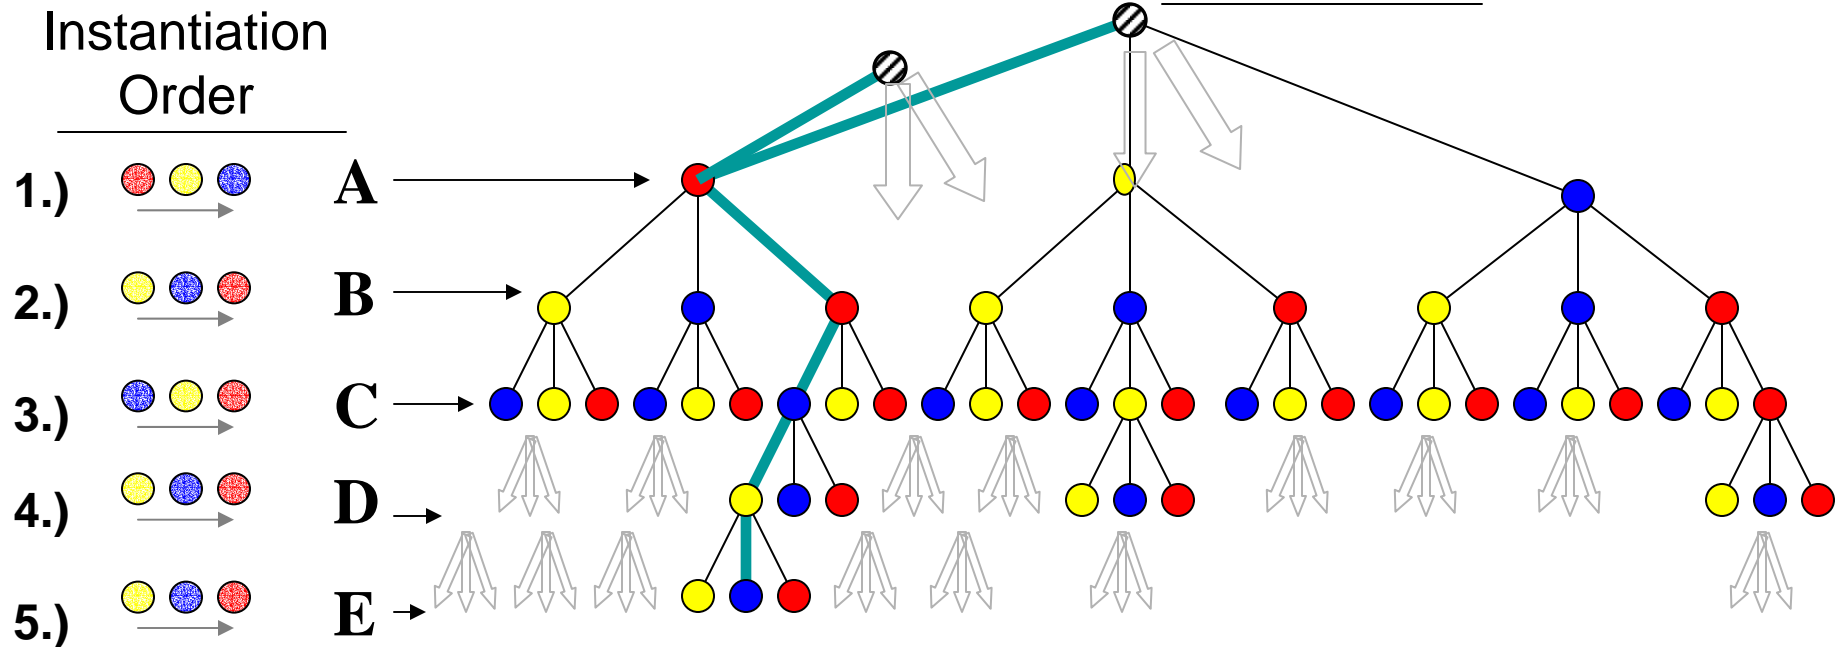

# Changing the Color Ordering to Create an Interesting Example Problem

- Pushes the first feasible solution further into the search tree
- Still covers all possible permutations of value assignments to variables
- Still a valid CSP

**Search Tree**

---

# Compare Three Backtracking Algorithms

---

- 1.) Chronological Backtracking
- 2.) Conflict-Directed Backjumping
- 3.) Dynamic Backtracking

# Sneak Preview of the Solution

---

Solve map example using:

- 1.) Chronological Backtracking
- 2.) Conflict-Directed Backjumping
- 3.) Dynamic Backtracking

Note:

This is what the solution will look like each time.

We will compare the # of nodes expanded (i.e. regions colored) until the first solution is found

1.) **A**

2.) **B**

3.) **C**

4.) **D**

5.) **E**

# 1.) Chronological Backtracking

## Chronological\_Backtrack()

- 1.) Set  $P = \{\text{null}\}$  ( $P$  is the partial solution to the CSP)  
Set  $V_i = \{1\}$  (start with first variable in instantiation order)
- 2.) If  $P = \text{solution}$ , return Success. If  $V_i = 0$  return Failure  
Else if  $P = \text{Consistent}$ ,  
set ( $V_i$ ) to the next variable in instantiation order and assign it's next domain color ( $c$ ).  
Else if  $P = \text{Inconsistent}$ , remove ( $c$ ) from domain of ( $V_i$ ) and continue
- 3.) While domain of ( $V_i$ ) is not empty, choose the next domain color ( $c$ ) and return to step 2.
- 4.) If domain of ( $V_i$ ) is empty (i.e. out of colors to try for ( $V_i$ ))  
Remove ( $V_i$ ) from  $P$ , set  $V_i = V_i - 1$ , and return to step 3.

- 3.)  → **C**
- 4.)  → **D**
- 5.)  → **E**

Notes:

# of Nodes Expanded

8

# 3.) Dynamic Backtracking

**Elimination Explanations:**

Region	Color	Red	yellow	blue
A	red			
B	yellow			
C	blue			
D	blue		A,B	A,B
E	<del>red</del>	A,B,D	A,B,D	A,B,D

**Instantiation Order :**

- 1.)  → **A**
- 2.)  → **B**
- 3.)  → **C**
- 4.)  → **D**
- 5.)  → **E**

Notes:

# of Nodes Expanded

8

# 3.) Dynamic Backtracking

**Elimination Explanations:**

Region	Color	Red	yellow	blue
A	red			
B	yellow			
C	blue			
D	<del>blue</del>		A,B	A,B
E	<del>red</del>			

**Instantiation Order :**

- 1.)    → **A**
- 2.)    → **B**
- 3.)    → **C**
- 4.)    → **D**
- 5.)    → **E**

Notes:

# of Nodes Expanded

8

# 3.) Dynamic Backtracking

**Elimination Explanations:**

Region	Color	Red	yellow	blue
A	red			
B	yellow			
C	blue			
D	red		A,B	A,B
E				

**Instantiation Order :**

- 1.) → **A**
- 2.) → **B**
- 3.) → **C**
- 4.) → **D**
- 5.) → **E**

Notes:

# of Nodes Expanded

8

# 3.) Dynamic Backtracking

**Elimination Explanations:**

Region	Color	Red	yellow	blue
A	red			
B	<del>yellow</del>			
C	blue			
D	<del>red</del>	A,B	A,B	A,B
E				

**Instantiation Order :**

- 1.) → **A**
- 2.) → **B**
- 3.) → **C**
- 4.) → **D**
- 5.) → **E**

Notes:

# of Nodes Expanded

9

# 3.) Dynamic Backtracking

Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
B	<del>yellow</del>			
C	blue			
D		A,B	A,B	A,B
E				

Notes:

Dynamic Backtracking doesn't have to erase C.

Instantiation Order :

1.) → **A**

2.) → **B**

3.) → **C**

4.) → **D**

5.) → **E**

# of Nodes Expanded

9

# 3.) Dynamic Backtracking

Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
B	<del>yellow</del>		A	
C	blue			
D		A,B	A,B	
E				A,B

Notes:

Dynamic Backtracking doesn't have to erase C.

Instantiation Order :

1.) → **A**

2.) → **B**

3.) → **C**

4.) → **D**

5.) → **E**

# of Nodes Expanded

# 3.) Dynamic Backtracking

Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B			A	
D				
E				

Notes:

A is recorded as the reason B can't be yellow

Instantiation Order :

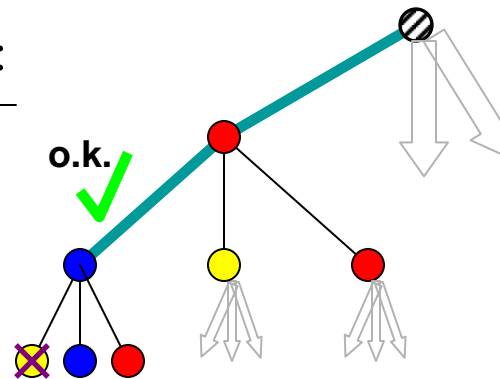

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

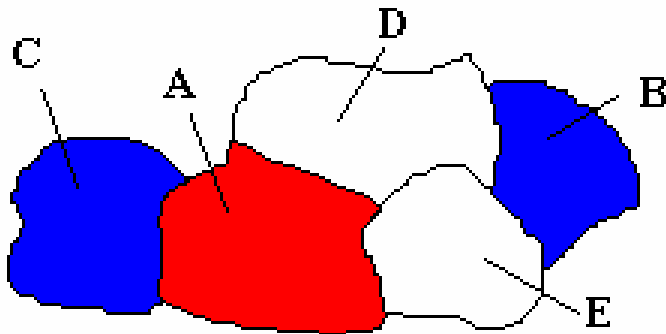

5.) → **E**

# of Nodes Expanded

9

# 3.) Dynamic Backtracking

## Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B	blue		A	A
D				
E				

Notes:

This is the same problem as before but only costs 6 nodes, since it is lower in the tree.

Instantiation Order :

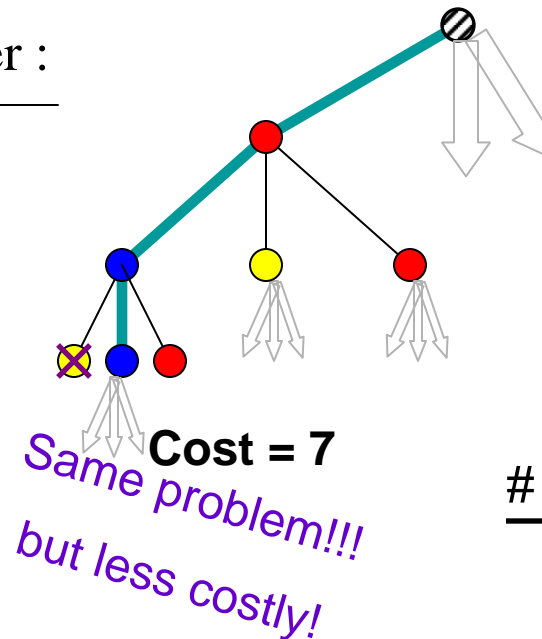

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

5.) → **E**

# 3.) Dynamic Backtracking

Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B	blue		A	A
D				
E				

Notes:

Now we're on the right track.

Instantiation Order :

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

5.) → **E**

# of Nodes Expanded

17

# 3.) Dynamic Backtracking

Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B	blue		A	A
D	yellow			
E				

Notes:

Now we're on the right track.

Instantiation Order :

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

5.) → **E**

# of Nodes Expanded

18

# 3.) Dynamic Backtracking

## Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B	blue		A	A
D	yellow			
E			A,B,D	

Notes:

Now we're on the right track.

Instantiation Order :

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

5.) → **E**

# of Nodes Expanded

19

# 3.) Dynamic Backtracking

## Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B	blue		A	A
D	yellow			
E			A,B,D	

Notes:

Now we're on the right track.

Instantiation Order :

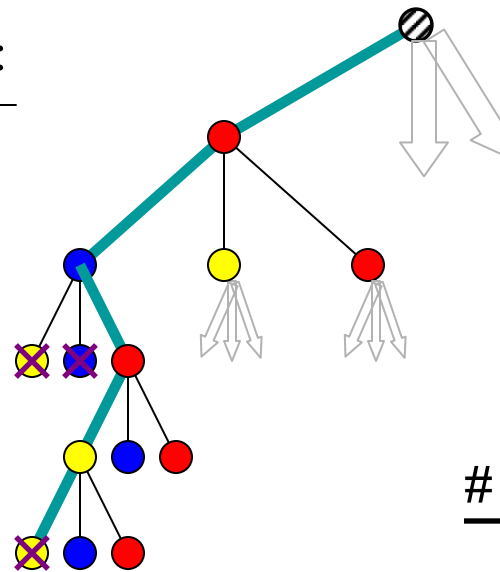

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

5.) → **E**

# of Nodes Expanded

19

# 3.) Dynamic Backtracking

## Elimination Explanations:

Region	Color	Red	yellow	blue
A	red			
C	blue			
B	blue		A	A
D	yellow			
E			A,B,D	

Notes:

**Solution Found!!**

Instantiation Order :

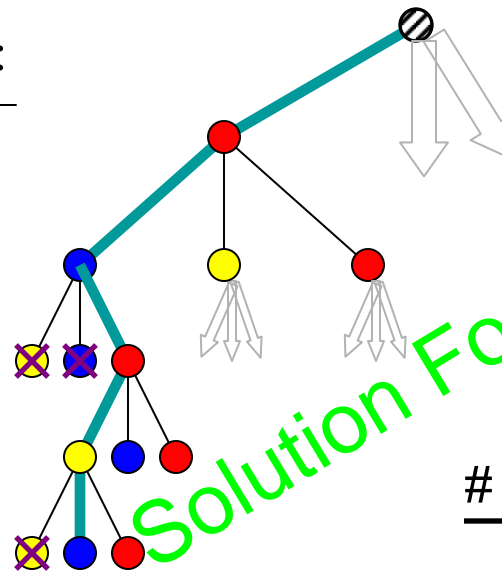

1.) → **A**

3.) → **C**

2.) → **B**

4.) → **D**

5.) → **E**

# of Nodes Expanded

20

# Dynamic Backtracking Summary

---

- **Positive Features**

- Allows a Variable Instantiation Order
- Allows partial assignments to remain assigned (if they are not part of a conflict)

- **Negative Features**

- Requires a conflict-detection sub-routine
- Requires more memory than simple backtrack search
- Completeness proof is not easy to understand or visualize (the proof that it doesn't skip over any of the search space)

---

## Map Example Results

---

Chronological BT	37
Conflict-Directed BT	23
Dynamic BT	20

1.) **A**

2.) **B**

3.) **C**

4.) **D**

5.) **E**
