Quiz 3

Wednesday April 16

---

---

**Total: 20 points**

S1) A LTI system has input  $x(t)$  and output  $y(t)$ .

The input and output of the LTI system satisfy the following differential equation

$$\frac{dy(t)}{dt} + y(t) = x(t)$$

The input is a periodic function of time that produces the following periodic output

$$y(t) = 2\cos(t - \pi/4)$$

- a) [2pts] Determine  $H(j\omega)$ , the input/output frequency response, of the LTI system
- b) [1pt] What is  $T$ , the period of the output  $y(t)$ ?
- c) [1pt] What is  $\omega_0$ , the fundamental frequency of the output  $y(t)$ ?
- d) [4pts] Show that the Fourier coefficients of the output  $y(t)$  are-

$$b_1 = e^{-j(\pi/4)}$$
$$b_{-1} = e^{j(\pi/4)}$$
$$b_k = 0 \quad k \neq \pm 1$$

- e) [2pts] What is the period of the input  $x(t)$ ?
- f) [6pts] Determine the Fourier coefficients of the input  $x(t)$
- g) [4pts] Write the input  $x(t)$  as a real function of time (i.e., not as a complex variable)
