

Introduction to Descriptive Statistics

2/21/02

Population vs. Sample Notation

| Population | V_s | Sample |
|---------------------|-------|--------|
| Greeks | | Romans |
| μ, σ, F, S | | s, b |

Types of Variables

Describing data

| | Moment | Non-mean based measure |
|--------|----------------------------------|-------------------------------|
| Center | Mean | Mode, median |
| Spread | Variance (standard deviation) | Range, Interquartile range |
| Skew | Skewness | -- |
| Peaked | Kurtosis | -- |

Mean

$$\frac{\sum_{i=1}^n x_i}{n} \equiv \boldsymbol{m} \equiv \bar{X}$$

Variance, Standard Deviation

$$\sum_{x=1}^n \frac{(x_i - \mathbf{m})^2}{n} \equiv \mathbf{S}^2,$$

$$\sqrt{\sum_{x=1}^n \frac{(x_i - \mathbf{m})^2}{n}} \equiv \mathbf{S}$$

Variance, S.D. of a Sample

$$\sum_{x=1}^n \frac{(x_i - \mathbf{m})^2}{n-1} \equiv s^2,$$

$$\sqrt{\sum_{x=1}^n \frac{(x_i - \mathbf{m})^2}{n-1}} \equiv s$$

Coefficient of variation

$$c.v. = \frac{\mathbf{\textit{S}}}{\mathbf{\textit{m}}} \times 100$$

Skewness

Symmetrical distribution

- IQ
- SAT

Skewness

Asymmetrical distribution

- GPA of MIT students

Skewness

(Asymmetrical distribution)

- Income
- Contribution to candidates
- Populations of countries
- “Residual vote” rates

Skewness

$$\frac{\sum_{i=1}^n (x_i - \bar{x})^3}{\sum_{i=1}^n (x_i - \bar{x})^{3/2}} \times \frac{(n-1)^{3/2}}{n-2} \approx$$

$$(mean - mode) / s \approx 3 \times (mean - median) / s$$

Skewness

Kurtosis

A few words about the normal curve

- Skewness = 0
- Kurtosis = 3

$$f(x) = \frac{1}{s \sqrt{2\pi}} e^{-(x-m)/2s^2}$$

More words about the normal curve

CEG example

| The instructor and/or section leader: | | | | | |
|---|------|------|-------|------|-------|
| | Mean | s.d. | Skew | Kurt | Graph |
| Gives well-prepared, relevant presentations | 5.9 | 0.75 | -1.5 | 5.8 | |
| Explains clearly and answers questions well | 5.8 | 0.78 | -1.1 | 4.1 | |
| Uses the blackboard well | 5.5 | 0.93 | -0.61 | 3.0 | |
| Speaks clearly | 6.2 | 0.59 | -1.1 | 6.4 | |
| Is available outside of class | 5.5 | 0.80 | -0.55 | 2.8 | |
| Is friendly and supportive | 6.1 | 0.71 | -1.0 | 3.8 | |
| Overall rating | 5.8 | 0.79 | -1.1 | 4.1 | |

Binary data

$$\bar{X} = \text{prob}(X) = 1 = \text{proportion of time } x = 1$$

$$s_x^2 = \bar{x}(1 - \bar{x}) \Rightarrow s_x = \sqrt{\bar{x}(1 - \bar{x})}$$

Commands in STAT for getting univariate statistics

- summarize
- summarize, detail
- graph, bin() normal
- graph, box
- tabulate [NB: compare to table]
