

Space  
Crisis!

Who's  
driving  
this  
thing??

After a fantastic 3 months in space, the explorers are ready to head home to Earth and get into their return pod.

# THE STORYBOARD

MALFUNCTION! Instead of Earth, the autopilot is rerouting the pod to PLUTO! The explorers must find a way to override the reroute.

# THE STORYBOARD

Observing an enticing platform in the middle of the pod, the explorers find they can stand on it.

# THE STORYBOARD

When all explorers are on  
the platform, a laser beam  
illuminates in the center.

# THE STORYBOARD

Up on the ceiling, stars  
flash. They look like  
targets!

# THE STORYBOARD

The explorers find that by shifting their weight on the platform, they can move the laser to hit the stars.

# THE STORYBOARD

The explorers move around the platform to point the laser at each star, guided by a light sequence.

# THE STORYBOARD

Success! Hitting all the stars before the time runs out prevents the autopilot from reprogramming. The pod is back on track for Earth!

The “weeble-wobble” control platform
