1. Please review the 3 homework problems in the power point. These sample calculations use estimated cost data that is now somewhat out of date. Never the less the basic ideas contained in the problems are still relevant.

2. There are some good homework problems at the end of chapter 4 in Ashby’s book. See in particular problems 4.8, 4.9, and 4.10, p.82-83.

3. Write a math model to represent the life cycle energy calculations done in the paper Remanufacturing and Energy Savings.
