

## Networks

Hari Balakrishnan (hari@mit.edu)

6.02 Spring 2009

Lecture #17

April 8, 2009

- Sharing, a fundamental problem
- Switches: circuit and packet switching
- Queues to absorb traffic bursts
- Understanding delays

Note: Lecture notes on course web site

## From Links to Networks

So far, we've learned about tools to help us communicate over a point-to-point link

Modulation + channel coding  
= physical layer

## Switches Orchestrate Link Sharing

- A switch is a computing device that allows many concurrent communications to share the network

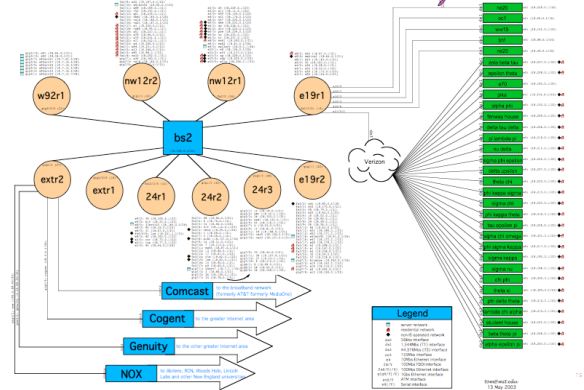

This structure is called a network topology

## MIT Campus Network

Topology Overview

## An early "switched" network: The optical telegraph

Pics: Proc. Symp. on the Optical Telegraph, Stockholm, June '94

- Chappe (1763-1805), "defense contractor"; 1st msg successfully sent in 1794
- Napoleon in power (1799): "Paris is quiet, and the good citizens are content."
- 1814: Extends from Paris to Belgium & Italy
- 1840: 4000 miles, 556 stations, 8 main lines, 11 sublines, each hop ~10 km
- Many modern techniques: framing, codes, redundant relays, message acks, priority messages, error notification, primitive encryption!

## Mechanical Telephone Switch

Almon Brown Strowger (1839 - 1902)

- 1889: Invents the "girl-less, cuss-less" telephone system
