

Projector Keystone Correction using FPGA

Ganesh Ajjanagadde Shantanu Jain James Thomas

November 6, 2014

Keystone Effect

KEYSTONE EFFECTS

Correct image

Keystone effect occurs when the projection is inclined

Vertical Keystone

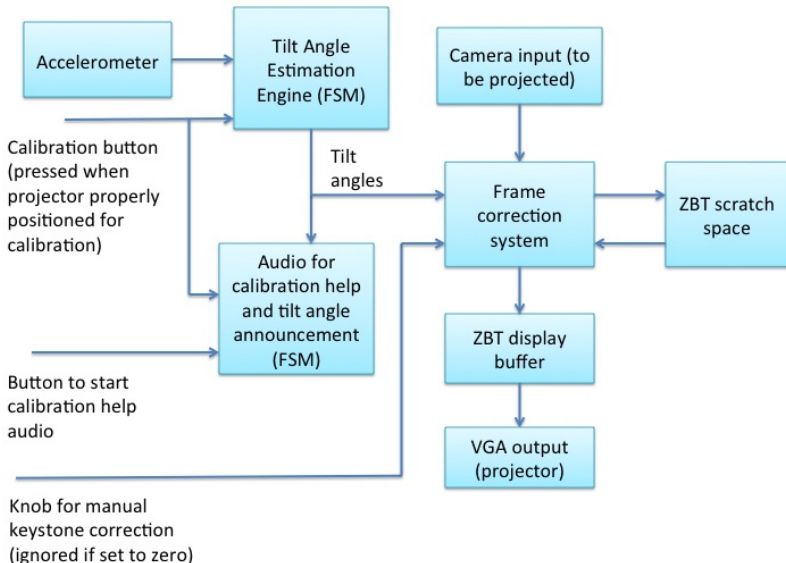

Previous Work

- ▶ Raskar and Beardsley [2001]
- ▶ Sukthankar et al. [2001]
- ▶ Both of these use complex software algorithms

Previous Work

- ▶ Raskar and Beardsley [2001]
- ▶ Sukthankar et al. [2001]
- ▶ Both of these use complex software algorithms
- ▶ Our contribution is creating a simple, FPGA prototype

Block Diagram

Accelerometer

- ▶ SPI digital interface – FPGA is master, accelerometer slave
- ▶ Accelerometer has different registers for x , y , z acceleration, signal which register to read
- ▶ Configurable SPI clock, but will still need to cross clock domains

Accelerometer

- ▶ SPI digital interface – FPGA is master, accelerometer slave
- ▶ Accelerometer has different registers for x , y , z acceleration, signal which register to read
- ▶ Configurable SPI clock, but will still need to cross clock domains
- ▶ Accelerometer is noisy – some sort of low pass filter needed
- ▶ Accelerometer nonlinearities – lookup table needed?

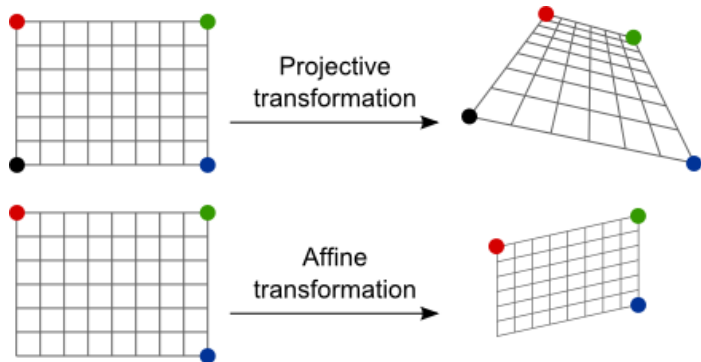

The Physics of a Projector

A Mathematical Model

Projective Transformation

The Projection Equation

- ▶ Let (x, y) denote the source image coordinates
- ▶ Let (X, Y) denote the coordinates on the screen
- ▶ $(X, Y) = \left(\frac{p_1x+p_2y+1}{p_3x+p_4y+1}, \frac{p_5x+p_6y+1}{p_7x+p_8y+1} \right)$
- ▶ Coefficients depend on the tilt of the projector through trigonometry

The Projection Equation

- ▶ Let (x, y) denote the source image coordinates
- ▶ Let (X, Y) denote the coordinates on the screen
- ▶ $(X, Y) = \left(\frac{p_1x+p_2y+1}{p_3x+p_4y+1}, \frac{p_5x+p_6y+1}{p_7x+p_8y+1} \right)$
- ▶ Coefficients depend on the tilt of the projector through trigonometry
- ▶ By projecting a known image, we have 8 equations in 8 unknowns
- ▶ Will require implementing a full-fledged Gaussian elimination routine on the FPGA
- ▶ Too hard, will be final (unlikely) stretch goal
- ▶ How can we simplify?

The Simplification

- ▶ Focus on the 2 axes of interest, and compute inverse mapping
- ▶ Vertical direction is relatively easy
- ▶ Side-to-side direction is harder

The Simplification

- ▶ Focus on the 2 axes of interest, and compute inverse mapping
- ▶ Vertical direction is relatively easy
- ▶ Side-to-side direction is harder
- ▶ Have to compute maximum rectangle of correct aspect ratio

Audio System - Motivation

- ▶ Auditory feedback is more effective
- ▶ Important for frequent setups or adjustments
- ▶ Highlight important details without affecting UI

Audio System - Functionality

- ▶ Calibration instructions
- ▶ Two-Axis Tilt Angle
- ▶ Percentage of pixels utilized

Audio System - Implementation

- ▶ Wave files → Bit Files → Labkit → CF Card
- ▶ Pre-recorded audio samples on CF Card

Audio System - Interface

- ▶ Set of triggers and data as interface.

Responsibilities

- ▶ Ganesh
 - ▶ Tilt Compensation Algorithm
 - ▶ Complexity
 - ▶ Hardware constraints
 - ▶ Implementability
 - ▶ Transform Module
- ▶ James
 - ▶ Accelerometer
 - ▶ Interfacing
 - ▶ Noise reduction
 - ▶ Calibration module
- ▶ Shantanu
 - ▶ Audio system design
 - ▶ Audio Samples
 - ▶ Triggers for each output
 - ▶ Audio module
 - ▶ Test Setup

Timeline

Week of:

November 10

- ▶ Initial module implementation

November 17

- ▶ System integration & module debugging

November 24

- ▶ System integration debugging

December 1

- ▶ Real-world testing & Stretch goals
