

FPGA-CAPELLA: A REAL TIME AUDIO FX UNIT

COSMA KUFA AND JUSTIN XIAO

WHAT IS FPGA-CAPELLA?

- FPGA-capella is an audio FX unit
- Allows users to apply interesting audio FX to their sound
- Offers flexibility
- Gives musicians an interesting visual interface

DRY SIGNAL: BORING!

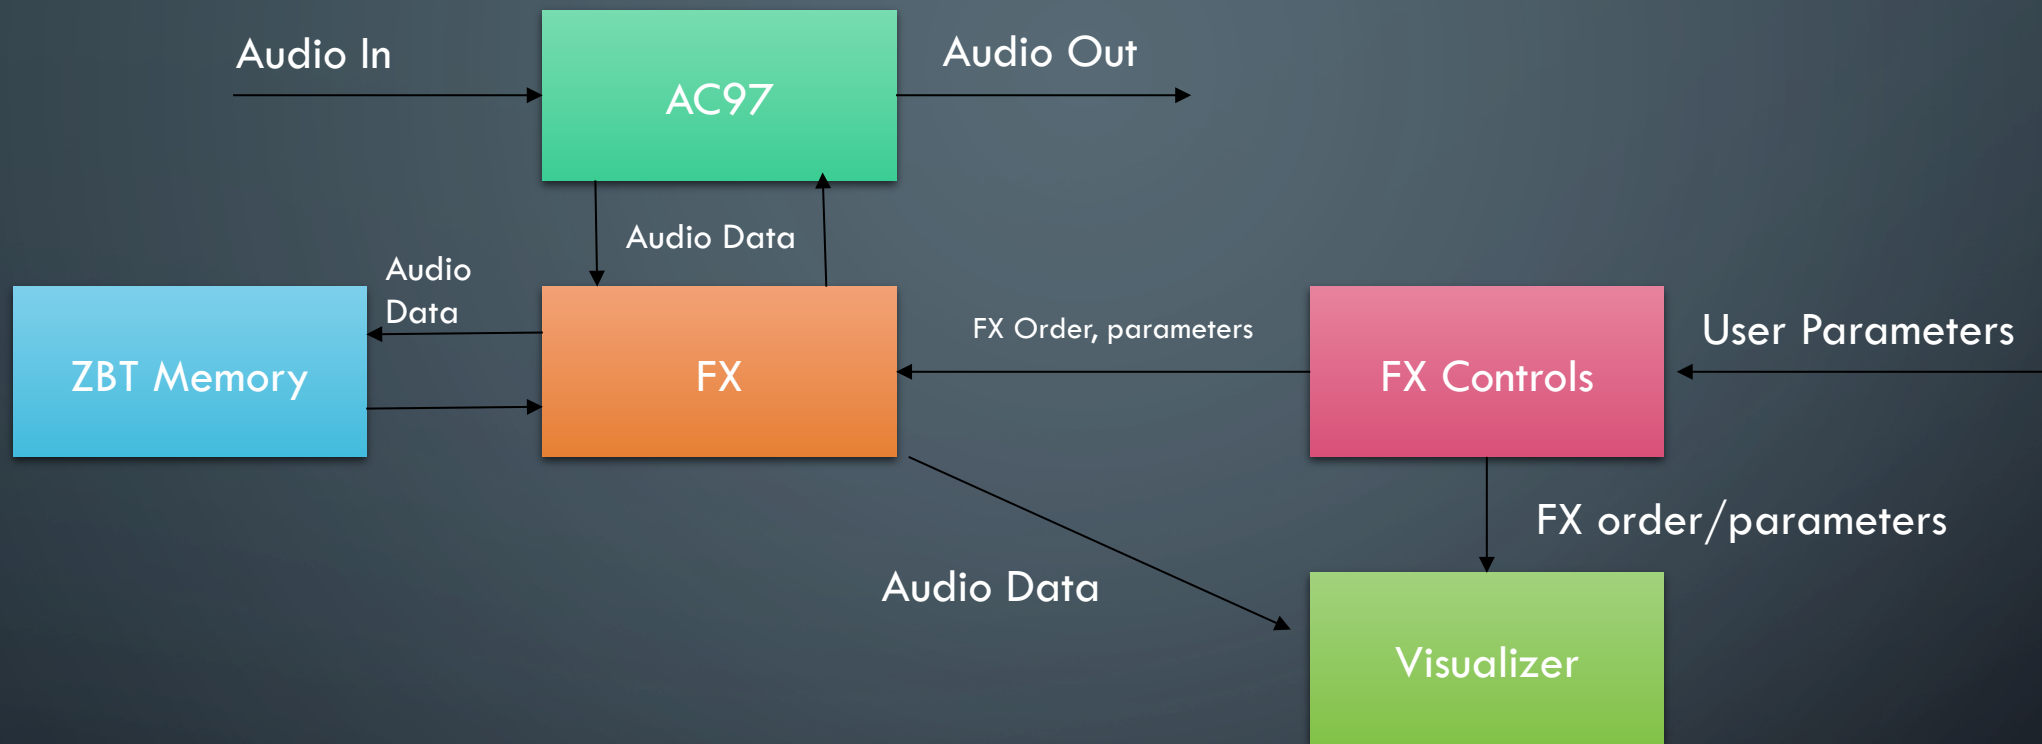

WET SIGNAL: INTERESTING!

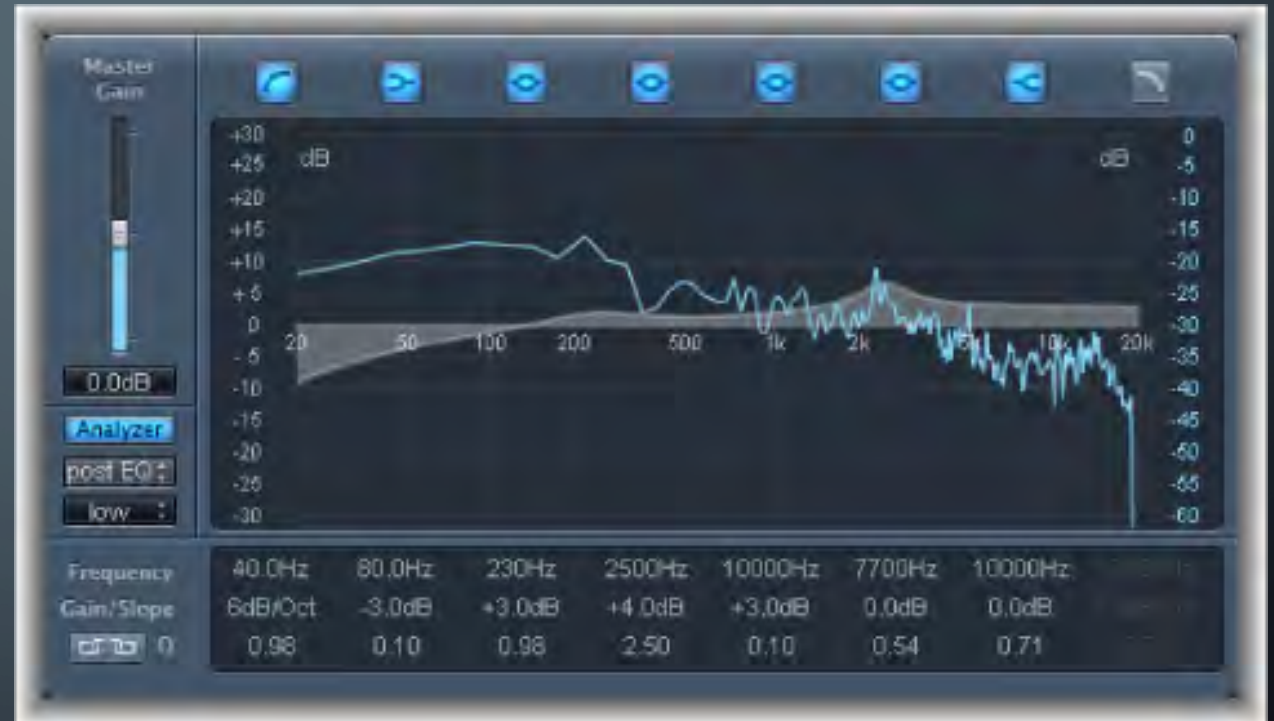

FPGA-CAPELLA REPLACES STANDARD FX!

- Typically, outboard FX are bulky and expensive
- Often, each FX unit can only do one job, such as filtering or distortion
- FPGA-capella is capable of producing multiple FX
- Users can choose up to 3 FX, decide order, and input parameters for each effect!

FX MODULE

- Delay
- Echo
- Equalization
- Distortion
- Looping
- Panning/stereo width

MEMORY

- What type of memory?
- How many bits are we storing?
- Memory Allocation Function

FX CONTROLLER MODULE

- 3 different controllers corresponding to each FX
- Once the FX for each controller is chosen, controller allows for user-controlled parameters
- Order the FX are chosen in determines the order of the FX chain
- This configuration allows for maximum flexibility!

VISUALIZER

- Analog level meter that swings with the audio level amplitude
- FFT frequency bin amplitude visualizer
- Highest frequency component indicator
- Peak amplitude indicator

TIMELINE

Week	To do
11/1/15	<ul style="list-style-type: none">• Plan each module• Test bit depth of AC97• Implement basic effects
11/8/15	<ul style="list-style-type: none">• Test basic effects• Implement a basic visualizer• Continue implementing FX
11/15/15	<ul style="list-style-type: none">• Implement Controls module• Finish Testing basic effects• Implement mouse module to ease user face interaction• Implement more advanced visuals
11/29/15	<ul style="list-style-type: none">• Finish testing and debugging• Implement a more appealing user interface
