

8.01 Second Chance Program

This year 8.01 is offering as an experiment a Second Chance Program during IAP. Students who do not pass 8.01 at the end of the fall term due to receiving a grade of D will be given the opportunity to do additional work and then retake a final exam during the January exam period: January 28-30. Here are the details.

- The student must have received the grade of D based on quiz and exam performance during the term. Students with the grade of F are not eligible.
- The student must have made a good faith effort to participate in the other 8.01 activities – such as Mastering Physics, class participation, and homework -- during the term.
- The Department will notify students who qualify for this opportunity soon after the 8.01 grades are turned into the Registrar at the end of the term.
- The student must attend a series of classes, **Integrated Mechanics Review**, run by Professor David Pritchard during IAP. The first class will be on Monday, January 12.
- The Department will submit an 8.01 grade change to the Registrar for those students who pass the exam at the end of IAP. These students will then be eligible to take 8.02 during the spring term.
