- This logo is heavily inspired by the proposal of Inti Lehmann.
- There is a large scale logo for talks etc.:

- There is also a version for inline use: OLYMPUS is great.
- It is all done using Latex and tikz, so it scales, and you can have color variations (like with the MIT logo) by redefining constants:

  ```
  \renewcommand{\logotextcolot}{red}
  \renewcommand{\logoycolor}{blue}
  ```

  yields:
