

Lesson Plan 22 Title: "Let's build our village"

Concept / Terminology / Topic to Teach: synthesize, finalize, decorate

Class Goal(s)/Objectives: When having constructed the final model, engineers revisit it to test and improve the final deliverable and then start to add decorative elements to provide more context.

Required Materials: 2 gender neutral puppets, paper wraps (either plain colored or presenting a building material), big carton board panels, fake grass, water paint, glue 4 dolls, 3 cars, 1 ball, 1 dog (per group), paper.

Setting: Classroom, Large group time, small group time.

Step-By-Step Procedures: During large group time you will start with revisiting what the final goal is by discussing what the children built in the last session. While having the children see their constructions let the children decide how they want their final complete village to be set up. Have them discuss ideas about the surroundings (streets, gardens).

Plan For Independent Practice: Have the children stick their houses on the carton board panels, and create the surrounding. When done, create small signs explaining what each building is and stick them on the final construction. Take pictures during the process to use in future lesson plans.

Closure (Reflect Anticipatory Set): End the class by repeating all the new ideas

Assessment Based On Objectives: Every child should have brought up one new idea about the surrounding and explain why it is a good idea to the other children, and also participate in the model improvement.

Possible Connections To Other Subjects: language and reasoning (while presenting the new ideas), science (when choices are getting discussed), art (while deciding how to decorate and provide context).
