

Lesson Plan 24 Title: “Let’s show it to our parents”

Concept / Terminology / Topic to Teach: present, explain

Class Goal(s)/Objectives: When having constructed the final model, engineers present them to colleagues or customers. Today children will present their work to their parents.

Required Materials: 2 gender neutral puppets, images placed on the wall throughout the year. It is suggested that the teacher will create a poster presenting photos of the children’s work constructed throughout the curriculum, a booklet for every child containing pictures relevant to the project.

Setting: Classroom, Large group time, small group time, extra time allocated parents’ visit and the presentation.

Step-By-Step Procedures: During large group time you will start with revisiting what the final goal is by discussing what the children built in the last session. While having the children see their and the images on the wall, walk with them through the whole engineering process followed since the beginning of the project.

Plan For Independent Practice: Have the children walk their parents through the constructions. Encourage the children to observe the posted and explain to their parent the steps followed throughout the semester.

Closure (Reflect Anticipatory Set): End the class by giving the booklets to the children. Encourage the children to use the pictures in the booklet to continue explaining the project to their parents.

Assessment Based On Objectives: Every child should demonstrate the ability to look at the images, pictures or buildings and describe the activity presented.

Possible Connections To Other Subjects: language and reasoning (while presenting the previous activities).
