January 25, 2010

Dear Colleague:

*Advanced graduate students are always looking for opportunities to teach in their area of expertise. The Experimental College at Tufts University is a place where that can happen.*

The comments that we consistently hear from the twenty-five instructors who teach each semester at the Experimental College go something like this:

"Being able to teach a course of my own design to highly motivated undergrads was a unique opportunity and a genuinely rewarding experience."

Enclosed you will find a poster announcing our semi-annual search for course proposals from people in the greater Boston community who have a special expertise to share with our undergraduates.

The Experimental College, founded in 1964, offers a full range of largely new courses every semester -- on an elective basis -- to the Tufts undergraduate student body. Our courses are intended to provide an alternative to the traditional departmental curricula by presenting interdisciplinary or contemporary subjects. Classes are usually kept to less than twenty students and are highly discussion/participation oriented.

An applicant whose proposal is approved will become a Visiting Lecturer for the semester, will receive a stipend, and will have access to university facilities.

Perhaps someone in your department or program, an advanced graduate student or adjunct faculty person, would be interested in this opportunity? If so, please refer to our website at www.excollege.tufts.edu for more information. You can access an application from the Visiting Lecturer Opportunities dropdown menu.

**The deadline for Fall 2010 proposals is March 12, 2010.**

Your consideration in posting our announcement and spreading the word is greatly appreciated.

Sincerely,

Robyn Gittleman  
Director, Experimental College  
Associate Dean of Undergraduate Education
