McKinsey & Co. seeks students with strong software development skills (part-time)

McKinsey & Co. is seeking qualified candidates to lead the software development work for a high priority project related to the high-tech industry. The project consists of an in-depth analysis of trends at the sector and sub-sector level. Work will require creation of a simple, interactive iPad app that will incorporate the results of these analytics. We are seeking two software developers with the following profiles:

1) UI designer/programmer proficient in developing for iPad
2) Core developer to implement client-server architecture that allows iPad app to access data

We are looking for creative self-starters who can work independently and can handle end-to-end software development process.

This is a part-time position that will require a minimum dedication of 15 hours per week. The project is likely to last 2-4 weeks, and the exact duration will be determined while defining the scope in conjunction with the candidate. The position will be paid and, while not being a Consultant position, offers the qualified candidate significant exposure to senior consultants, learning many aspects of the Firm's problem-solving approach first hand.

Interested applicants should contact Abhi Srivastava (abhishek_srivastava@mckinsey.com) with their resume and a brief note describing their relevant skills and background.
