Opportunity at a Start-up Company in Cambridge

Soane Mining
Cambridge, MA

We are seeking a talented Research Scientist to expand our research efforts developing innovative water treatment solutions. Soane Mining is a Cambridge based technology incubator founded by a serial entrepreneur and is financed by venture capital. We are developing novel water treatment technologies based on polymers and surface science for addressing critical industrial needs. Be a part of the start-up environment with the ability to make a large impact on the developing science and outcome of the company.

Duties and Responsibilities:
- Work with a product development team to research innovative polymer/chemical solutions for water treatment
- Work independently on basic applied research projects related to the company objectives
- Communicate ideas and solutions in both internal and external presentations
- Contribute to the patent portfolio of the company
