Organization Overview

Aspen Technology, the world's leading supplier of software that optimizes process manufacturing, has opportunities for recent university graduates. We have various job openings for candidates that will have opportunities in organizations that work directly with our software products: Research & Development, Quality, Product Management, and Business Analysis. These opportunities will provide exposure to our world-class technology and prepare participants for a career in the software technology industry. Visit us at www.aspentech.com.

Responsibilities – Software Developer/Engineering

**Learning**
Gain proficiency in Aspen Technology’s core products and processes by working as an entry level Software Developer which offers career growth in a variety of future specializations. Product knowledge will be gained through self-study, on the job training, attending public training, meetings, and coaching. Specific learning objectives to be determined.

**Projects**
Depending on the role, candidates can contribute to a wide range of initiatives developing engineering software for: modeling of chemical process or equipment, physical properties, distillation, solids handling, and supply chain operations.

**Social Media and Mobile Applications**
Be a part of elevating Aspen Technology into the social media arena and transform ideas and concepts into software prototypes for the process industries.

**Qualifications**

- Bachelor’s and Advanced degrees in Chemical Engineering and related Engineering and Science.
- Programming skills in developing software.
- Knowledge of engineering software desirable.
- Willing to learn a range of business or technical specialties based on business needs.
- Excellent interpersonal, communication and presentation skills.
- Demonstrated ability to convey complex information in a clear and concise manner.
- Strong academic performance.
- English fluency (written and verbal) required.
