Please join us in 66-110 on Wednesday January 20th from noon until 2:00 for a hands on seminar with Swagelok Cambridge Valve & Fitting.

The seminar will include pizza. This will be a presentation and hands-on learning opportunity. Participants will develop an understanding of how to construct their own handling and control systems for gasses and liquids. The basic function of valves for directional control, metering, on/off control and one way check valves will be discussed as well as a discussion of packed versus packless valve stem construction and their suitability for particular applications. Fundamentals of pipe versus tubing connections will be presented and will included discussions of compression seals, welded connections, face and vacuum seals fittings. There will be plenty of time for specific questions and opportunities for hands-on fitting use.
