

Amazon.com Inc. Company Update

Mark J. Rowen

Rating: SELL (High Risk)

- □ Anemic growth in AMZN's B/M/V segment has caused us to re-examine its valuation.
- □ We believe a rational valuation approach reveals significant downside risk to equity holders. We are downgrading to Sell and reducing our price target to \$9.

What's Amazon Worth? Maybe Less Than Meets The Eye— Downgrading AMZN To Sell From Hold

Amazon.com Inc., based in Seattle, Washington, is the leading Internet retailer, serving more than 29 million customers.

As the year 2000 unfolded, revenue growth at Amazon.com slowed considerably. A combination of a slowing U.S. economy, the law of large numbers, the dot-com meltdown and surrounding publicity, and (in our opinion) household saturation finally caught up with the company and its record of hyper-growth. Total company growth in the fourth quarter of 2000 was not terrible in a slow economy, at 44% above the year-ago quarter. However, growth in AMZN's core U.S. book/music/video (B/M/V) segment was extremely disappointing, up just 11% from fourth-quarter 1999.

A Re-Examination Of AMZN's Valuation...

The anemic growth in AMZN's most mature (and only profitable) segment caused us to re-examine

AMZN's market valuation. Based on this reevaluation, we believe that AMZN's market capitalization is overextended, and poses further downside risk to investors, even though the stock is off 87% from its all-time high of \$113 (and some would argue that the bad news is already reflected in its current price).

...Spurred Our Downgrade To Sell. Since we now believe that an investment in AMZN holds greater downside risk than upside potential, we are lowering our rating on AMZN to Sell from Hold and our price target to \$9 from \$20.

We utilized several techniques to help us evaluate a reasonable firm value for AMZN, including a sum-of-the-parts analysis and a discounted cash flow analysis. Based on these analyses, detailed later in this report, we believe a reasonable value for AMZN shares is south of \$10 per share, perhaps as low as \$8.

Obviously, this value greatly depends upon the inputs into the model. Therefore, to estimate present value, we use what we consider to be a middle-of-the-road scenario, which implies growth rates and operating margins that are similar to those of successful traditional retailers.

What Exactly Is An Investment In AMZN Worth? In our view, the exact value of Amazon.com is impossible to determine at this juncture with currently available information. For if present value is simply the company's future earnings, discounted for the time value of money, then the only certainty about Amazon's future profits is that

they are extremely uncertain. However, the recent fourthquarter results gave investors the first glimpse of what this enigmatic company might look like as it matures.

What we found in the fourth-quarter results was a company with a large, slow-growing, rather profitable U.S. B/M/V business. In addition, Amazon has a fast-growing international segment (which also primarily sells books, music, and video) and a much faster-growing (but moneylosing) "early-stage businesses" segment, whose revenue is primarily driven by consumer electronics sales.

For valuation purposes, we prefer to segment these businesses in a slightly different manner than management does, in order to better understand the implicit value the market might be placing on AMZN's business segments. In Figures 1 and 2, we detail our segmentation of AMZN's businesses and illustrate what we consider to be Amazon's global mass-market category-killer profile in books, music, and video. In addition, the company has a consumer electronics store, a toy partnership with Toys "R" Us (TOY-\$26.00, rated Accumulate by Prudential Securities's Senior Retailing/Hardlines Analyst Amy E. Ryan), and several other categories (e.g., tools, kitchen, lawn and garden, and auctions) that don't currently contribute much to revenue or firm value. Although some continue to argue that AMZN is a general merchandise retailer, we don't think that this is an accurate title, at least not at present. Amazon.com has yet to demonstrate that its customers wish to buy a wide variety of products online.

Since we believe that Amazon is a category killer in several categories, as opposed to a general merchandise retailer, we can better define the company's future earnings. If we combine Amazon's U.S. B/M/V and international segments,

we find a global retailer with more than \$2 billion of revenue in full-year 2000. We are very impressed by this, considering that the company sold its first book more than five years ago (in July 1995). Yet, given the fact that the world's largest book retailer, Barnes & Noble, Inc. (BKS— \$25.87, rated Accumulate by Amy E. Ryan), is expected to generate revenue of approximately \$4 billion in fiscal 2001 (ended January 31, 2001), we are not really surprised that AMZN's fourth-quarter U.S. B/M/V growth was a disappointing 11% above that of fourth-quarter 1999.

Even if we put aside our concerns regarding future growth, and assume that AMZN will be able to grow its global B/M/V revenue at 14%, compounded annually for the next five years, the company would achieve segment revenue of approximately \$4 billion in full-year 2006. At that point, we assume that growth would likely settle in at the rate of industry growth, or, in other words, Amazon would then grow at about the same rate as its competition.

We have been impressed with Amazon's ability to effectively raise prices in its U.S. B/M/V segment, but we believe that it has come at the cost of revenue growth. Therefore, for our sum-of-the-parts analysis, we give the company the benefit of the doubt, and assume it will be able to maintain segment operating margins in the range of 7%-8%. In addition, we assume that advertisers will be willing to pay up to reach Amazon's millions of customers, contributing another 2%-3% to the company's operating margin and allowing the company to achieve 10% operating margins in these segments. For comparison, we note that Barnes & Noble, as well as Borders Group (BGP-\$15.20, rated Hold by Amy E. Ryan), have historical five-year average operating margins of approximately 5.5%; therefore we implicitly credit AMZN for a more attractive business model than its brick-and-mortar competitors. With these assumptions in place, and a 40% expected tax rate, we project that Amazon's global B/M/V segment will earn approximately \$247 million in full-year 2006.

Next, we capitalize the \$247 million at a multiple of 25 times future earnings, which translates into a future firm value somewhere in the neighborhood of \$6 billion. Of course, an expectation of \$6 billion in 2006 is not the same as \$6 billion in hand today, so we discount that future firm value at a rate of 15%, compounded annually. Investors

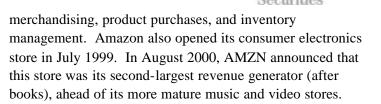

who follow our work know that we generally use a 20% discount rate for stocks in our Internet universe, which we deem appropriate for higher-risk companies. However, in this case we isolate Amazon's core B/M/V business, so we believe there is less inherent risk. We calculate that the present segment value is approximately \$3 billion.

If we are correct in our assessment of Amazon's \$3 billion global B/M/V segment worth, then it would appear that its current \$4.8 billion market capitalization is not so farfetched. However, we must remember that AMZN has \$2.1 billion of convertible debt on its balance sheet. After we add the debt and subtract its \$1.1 billion in cash (as of December 29, 2000), we are left with a firm value of roughly \$6 billion—and the global B/M/V segment only accounts for slightly more than 50% of this firm value. In our view, the difference between our estimated B/M/V segment value and the current firm value is roughly \$2.8 billion, or \$7.76 per share. We believe this \$2.7 billion is the value the market has implicitly placed on Amazon's other category segments.

What's Left? Consumer Electronics And A Few Other

Product Categories. If the global B/M/V segment is subtracted from Amazon's business, what are investors left holding? In our view, they are left with a sizable consumer electronics store, a partnership with Toysrus.com, and a few other product category offerings that have yet to interest Amazon's millions of customers. Other than consumer electronics and the company's toy category deal with Toysrus.com, we find it hard to believe that the other businesses could make a significant dent in that additional \$2.7 billion in market value. In our analysis we generously value these categories at \$100 million. Could the consumer electronics store and the toy joint venture be worth anywhere near \$2.7 billion? Let's look at how these businesses have fared to date.

Amazon opened its toy store in July 1999. In the fourth quarter of 1999, the company was forced to write off \$39 million of inventory (presumably most of it in overstocked toys). In August 2000, Amazon and Toysrus.com announced a joint venture, in which AMZN would be responsible for the co-branded Web site and its development, as well as product warehousing, fulfillment, and shipping. Toysrus.com would be responsible for

What Is The Toy Partnership Worth? It is difficult to place a value on Amazon's toy partnership with Toysrus.com because neither company will disclose its terms. However, Amazon's fourth-quarter results helped us to understand the basics of the deal. AMZN has stated that it receives four streams of revenue: a fixed annual payment, a flat fee per item, a percentage of gross revenue, and all shipping revenue. Toys "R" Us stated that its online sales during the nine-week holiday season was \$124 million, and estimated sales for the three months ended December 31, 2000, at approximately \$150 million. Of this, we estimate that Amazon received \$34 million in revenue (excluding shipping and a \$9 million inventory sale to TOY), and \$12 million in gross profit. We don't know how much, if any, of AMZN's "early-stage businesses" segment operating expense applied to toys, but even if we assume none of it did, we estimate the net after-tax operating profit contribution from this partnership at a miniscule \$7 million.

Even if we assume TOY can grow online revenue at more than 30% for the next six years and achieve \$750 million by 2006, and if we assume TOY would give AMZN operating profits of 3% of gross sales (TOY's five-year average operating margin is only 6.3%), it would only amount to net income of \$23 million. Capitalized at 30 times forward earnings and discounted back at 20%, we estimate the toy category may potentially have a present value of little more than \$270 million, even though our assumptions for future sales growth and AMZN's share of the spoils seem fairly aggressive.

So What's The Value Of The Consumer Electronics (C/E) **Business?** We can't exactly dissect the performance of Amazon's consumer electronics store, since the company discloses C/E results as part of its early-stage businesses segment. However, we are able to approximate results in this store through supplemental disclosures. If we deduct advertising/fee-based revenue and gross profit from AMZN's early-stage businesses segment, we are left with results from the consumer electronics store, along with

smaller product categories such as home improvement, lawn and garden, and kitchen. We estimate that these product categories contributed \$242 million in revenue and \$20 million in gross profit in fourth-quarter 2000. Therefore, we believe that C/E's gross margin contribution could only have been 8.3%, at best.

Furthermore, we know that Amazon's company-wide fulfillment costs amounted to 15% of product revenue in the quarter, so if we apply this rate to consumer electronics, we find that AMZN's contribution margin in C/E (which we define as gross profit less fulfillment cost as a percentage of revenue) was negative 7%. In other words, it cost Amazon a minimum of \$1.07 for every \$1.00 of C/E revenue. In addition, segment operating expenses added another \$0.32 to the loss, meaning that Amazon lost \$1.39 for every \$1.00 of product revenue in the segment.

We find it hard to believe that this segment could be rationally valued at anywhere close to the \$2.3 billion gap between firm value and our global B/M/V, toy and "other" segment value estimate. Consumer electronics is a notoriously difficult business, and pure-play online consumer electronics retailers have found profitability elusive. The current market capitalizations of Outpost.com (COOL-\$1.31, not rated), Buy.com (BUYX-\$0.63, not rated), and Egghead (EGGS-\$0.81, not rated) are approximately \$41 million, \$84 million, and \$39 million, respectively. Each of these firms has built rather substantial, but money-losing, Internet-based consumer electronics businesses with expected revenue of more than \$500 million per year, yet the market value of each is at only approximately 0.1 times forward revenue. While some would argue that Amazon's C/E business is more attractive than those of its competitors, we believe it is only marginally more so.

Add It All Up, And What Have You Got? Based on our sum-of-the-parts analysis, we estimate that Amazon's present firm value is approximately \$8 per share. Of course, many assumptions are incorporated into this valuation, some or all of which may prove erroneous. Yet despite the drawbacks inherent in this type of analysis, we believe it does point to significant risk for AMZN shareholders, if the assumptions prove correct. **Discounted Cash Flow Analysis.** We also tried to assess AMZN's present equity value through a series of companywide discounted cash earnings analyses. In Figures 3-5, we illustrate three discounted cash flow analyses of AMZN, portraying what we believe to be a best case, a worst case, and a middle-of-the-road scenario. We leave it to investors to decide for themselves what the future may hold, but in our view, the latter is the most likely outcome. In the sections below, we describe the methodology and resulting valuation parameters for each scenario.

Our Middle-Of-The-Road Scenario Reveals A Lower Firm Value... This scenario is illustrated in Figure 3. For this analysis, we based AMZN's long-term growth and profitability on historical results from a select group of traditional retailers that have, to date, survived the competitive wars (Figure 6).

Our assumptions include revenue of more than \$8.6 billion by full-year 2006, equating to an impressive but not incomprehensible CAGR of 20.8% through 2006. In addition, we assume steadily improving operating profit margins, reaching a rather typical (at least for traditional retailers) 6% company-wide operating margin by 2006. This translates into operating at break-even in full-year 2003, and EPS reaching \$0.87 in full-year 2006 (assuming no further equity dilution). Based on these assumptions, we utilize a P/E multiple sensitivity analysis to arrive at an estimated range for AMZN's value. Finally, we use a 20% discount rate on the future earnings in order to compensate investors for the risk inherent in AMZN's model.

We estimate that AMZN could be worth anywhere from \$2.83 to \$11.56 per share, based on a P/E multiple range of 15-40 times, with the most likely range, in our opinion, between \$6.32 and \$9.82.

...But The Best-Case Scenario Could Be Its Undoing. Clearly, with the market placing a \$14.44 value on AMZN shares, our middle-of-the-road valuation analysis could be mistaken. Thus, we show in Figure 4 a DCF analysis with what we consider to be a best-case scenario, which portrays the bull case for AMZN. As this analysis reveals, we estimate that the present value of AMZN shares could be as high as \$62; however, we note that the assumptions needed

to reach this valuation level are extremely aggressive, and

unlikely to pan out.

Prudential Securities

The assumptions we use in this best-case scenario include revenue of more than \$12 billion in 2006, equating to a CAGR of 28% through 2006. In addition, we assume steadily improving operating profit margins, reaching an impressive 10% company-wide by 2006. This translates into a full-year 2001 loss per share of \$0.31 (versus our current LPS estimate of \$0.92), break-even in full-year 2002 (versus our current LPS estimate of \$0.55), and rapidly increasing EPS, reaching \$2.05 in full-year 2006 (assuming no further equity dilution). Based on these assumptions, we utilize a P/E multiple sensitivity analysis to arrive at an estimated range of AMZN's value. Finally, we use an 18% discount rate in this scenario, 200 basis points lower than our preferred 20% rate for Internet retailers (although higher than the 15% rate we used earlier for Amazon's B/M/V segment alone).

As detailed at the bottom of Figure 4, using our best-case assumptions, we estimate that AMZN's present value could be worth anywhere from \$17.30 to \$62.13 per share, based on a P/E multiple range of 20-70 times.

However, The Worst-Case Scenario Shows That Complete Loss Of Equity Value Is A Possibility. Just as it is possible to paint a bullish, best-case scenario for AMZN, it is also possible to paint a bearish, worst-case scenario. In this scenario, growth falters, operating breakeven is achieved but within a longer-than-expected time frame, and operating margins ultimately max out at a lowerthan-expected level. In this scenario, as detailed in Figure 5, AMZN shares have little if any present equity value.

The assumptions we use in this worst-case scenario include revenue of just \$5.7 billion in 2006, equating to a CAGR of 12.7% through 2006. We note that, as illustrated in Figure 6, this growth rate is in line with the mean and median fiveyear average growth rates for our select group of traditional retailers. In addition, while we continue to assume an improving operating profit/(loss) margin, AMZN doesn't achieve company-wide break-even in this scenario until full-year 2004, and ultimately, in the final year of the analysis, achieves a meager operating margin of 4%. This translates into EPS reaching just \$0.38 in full-year 2006 (assuming no further equity dilution). Based on all of these input assumptions, we utilize a P/E multiple sensitivity analysis to arrive at an estimated range for AMZN's value. Finally, in this scenario, we use a 22% discount rate on future earnings, 200 basis points higher than our preferred 20% rate for Internet retailers, as investors contemplating a worst-case scenario would naturally expect a higher rate of return.

As detailed in Figure 5, using our worst-case assumptions, we estimate that AMZN could be worth anywhere from \$(1.16) to \$2.38 per share, based on a P/E multiple range of 15-40 times. If this worst-case scenario were to play out, then equity investors in AMZN would have little to no value, in our view.

The Balance Sheet Debate Rages On. In several reports focused on Amazon's convertible debt, an analyst from a competing firm questioned the company's ability to continue as a going concern. In a recent report, this analyst essentially contended that AMZN's working capital will continue to deteriorate, causing its trade creditors to tighten credit restrictions, resulting in a working capital crunch. We find ourselves in the odd position of defending a company whose rating we are downgrading to Sell!

While the future scenario in our competitor's report is certainly possible, we believe it is rather unlikely. In Figures 8 and 9, we show the historical and projected cash flow statement and balance sheet for Amazon. In our opinion, the history of retail shows that retailers generally experience cash flow and working capital problems when they commit to inventory that they are later unable to sell. This scenario can quickly lead to a cash crunch, even at well-managed retailers.

However, since Amazon off-loaded toy inventory risk to Toys "R" Us, it has extremely low inventory risk exposure. For the most part, inventory risk in the book, music, and video categories is taken by the publisher, not the retailer; thus, Amazon could return unsold items for credit at the end of the season, if necessary. In addition, it now has little, if any, inventory risk in toys. Therefore, the only product category of any size in which Amazon has significant inventory risk is consumer electronics. And in our experience, we've found that relatively fresh consumer electronics inventory can be sold at a small discount, if necessary, so inventory risk here is unlikely to precipitate a cash crisis for Amazon.

If inventory risk is unlikely to cause a cash crisis at AMZN, the other areas of concern might be capital expenditures and operating losses. In our view, the heaviest period of capital expenditures is behind the company, with a large infrastructure already in place, as evidenced by the projected \$120 million in capital expenditures for full-year 2001. And finally, unless a long, deep recession occurs, we believe Amazon will have enough cash to fund operating losses at least through the end of 2002.

In conclusion, we believe that a rational valuation approach to AMZN reveals significant downside risk to equity holders. In our opinion, the risk outweighs the upside potential. Therefore, we are lowering our rating on AMZN to Sell (from Hold) and our price target to \$9 (from \$20).

Prudential Securities Incorporated makes a primary over-the-counter market in the shares of Amazon.com Inc.

Prudential Securities Incorporated acts as a specialist that makes a market in the security of Toys "R" Us. At any given time, the specialist may have a position, either long or short, in the security, and, as a result of the associated specialist's function as a market maker, such specialist may be on the opposite side of orders executed on the floor of a national securities exchange.

Any OTC-traded securities or non-U.S. companies mentioned in this report may not be cleared for sale in all states. See BLUE on ERA.

One Seaport Plaza, New York, NY 10292 Information contained herein is based on data obtained from recognized statistical services, issuer reports or communications, or other sources, believed to be reliable. However, such information has not been verified by us, and we do not make any representations as to its accuracy or completeness. Any statements nonfactual in nature constitute only current opinions, which are subject to change. Prudential Securities Incorporated (or one of its affiliates or subsidiaries) or their officers, directors, analysts, employees, agents, independent contractors, or consultants may have positions in securities or commodities referred to herein and may, as principal or agent, buy and sell such securities or commodities. An employee, analyst, officer, agent, independent contractor, a director, or a consultant of Prudential Securities Incorporated, its affiliates, or its subsidiaries may serve as a director for companies mentioned in this report. Neither the information nor any opinion expressed shall constitute an offer to sell or a solicitation of an offer to buy any securities or commodities mentioned herein. There may be instances when fundamental, technical, and quantitative opinions may not be in concert. This firm (or one of its affiliates or subsidiaries) may from time to time perform investment banking or other services for, or solicit investment banking or other business from, any company mentioned in this report.

There are risks inherent in international investments, which may make such investments unsuitable for certain clients. These include, for example, economic, political, currency exchange rate fluctuations, and limited availability of information on international securities. Prudential Securities Incorporated, its affiliates, and its subsidiaries make no representation that the companies which issue securities which are the subject of their research reports are in compliance with certain informational reporting requirements imposed by the Securities Exchange Act of 1934. Sales of securities covered by this report may be made only in those jurisdictions where the security is gualified for sale. The contents of this publication have been approved for distribution by Prudential-Bache International Limited, which is regulated by The Securities and Futures Authority Limited. We recommend that you obtain the advice of your Financial Advisor regarding this or other investments.

Additional information on the securities discussed herein is available upon request.
