Beyond: Sparse Recovery / Compressive Sensing

- Overview
- Adaptivity
- Conclusion

Goal: Compute the Fourier transform $\hat{x} = Fx$ when \hat{x} is *k*-sparse.

- Theory:
 - The fastest algorithm for Fourier transforms of sparse data.
 - The only algorithms faster than FFT for all k = o(n).

My Contributions

Goal: Compute the Fourier transform $\hat{x} = Fx$ when \hat{x} is *k*-sparse.

- Theory:
 - The fastest algorithm for Fourier transforms of sparse data.
 - The only algorithms faster than FFT for all k = o(n).
- Practice:
 - Implementation is faster than FFTW for a wide range of inputs.
 - Orders of magnitude faster than previous sparse Fourier transforms.
 - Useful in multiple applications.

Lemma

If t is isolated in its bucket and in the "super-pass" region, the value b we compute for its bucket satisfies

$$b = \widehat{x}_t$$
.

Computing the b for all O(k) buckets takes $O(k \log n)$ time.

소리 에 소문에 이 것 같아. 소문 이 모님의

Lemma

For most t, the value b we compute for its bucket satisfies

 $b = \hat{x}_t$.

Computing the b for all O(k) buckets takes $O(k \log n)$ time.

Lemma

For most t, the value b we compute for its bucket satisfies

 $b=\widehat{x}_t.$

Computing the b for all O(k) buckets takes $O(k \log n)$ time.

- Time-shift *x* by one and repeat: $b' = \hat{x}_t \omega^t$.
- Divide to get $\dot{b}'/b = \omega^t$

Lemma

For most t, the value b we compute for its bucket satisfies

 $b=\widehat{x}_t.$

Computing the b for all O(k) buckets takes $O(k \log n)$ time.

- Time-shift *x* by one and repeat: $b' = \hat{x}_t \omega^t$.
- Divide to get $b'/b = \omega^t \implies$ can compute *t*.

Lemma

For most t, the value b we compute for its bucket satisfies

 $b = \hat{x}_t$.

Computing the b for all O(k) buckets takes $O(k \log n)$ time.

- Time-shift *x* by one and repeat: $b' = \hat{x}_t \omega^t$.
- Divide to get $b'/b = \omega^t \implies$ can compute *t*.
 - ► Just like our 1-sparse recovery algorithm, $x_1/x_0 = \omega^t$.

Recap of Sparse Fourier Transform

• Theory:

- The fastest algorithm for Fourier transforms of sparse data.
- The only algorithms faster than FFT for all k = o(n).

Recap of Sparse Fourier Transform

Theory:

- The fastest algorithm for Fourier transforms of sparse data.
- The only algorithms faster than FFT for all k = o(n).
- Practice:
 - Implementation is faster than FFTW for a wide range of inputs.
 - Orders of magnitude faster than previous sparse Fourier transforms.
 - Useful in multiple applications.

Theorem

Adaptive *k*-sparse recovery is possible with $O(k \log \log(n/k))$ measurements.

Theorem

Adaptive k-sparse recovery is possible with $O(k \log \log(n/k))$ measurements.

Theorem

Adaptive *k*-sparse recovery is possible with $O(k \log \log(n/k))$ measurements.

Suffices to solve for k = 1:

Theorem

Adaptive k-sparse recovery is possible with $O(k \log \log(n/k))$ measurements.

Suffices to solve for k = 1:

Lemma

Adaptive 1-sparse recovery is possible with $O(\log \log n)$ measurements.

Lemma

Adaptive 1-sparse recovery is possible with $O(\log \log n)$ measurements.

• Non-adaptive lower bound: why is this hard?

소리 에 소문에 이 것 같아. 소문 이 모님의

Lemma

Adaptive 1-sparse recovery is possible with $O(\log \log n)$ measurements.

- Non-adaptive lower bound: why is this hard?
- Hard case: x is random e_i plus Gaussian noise w with $||w||_2 \approx 1$.

and the product of the state of

Lemma

Adaptive 1-sparse recovery is possible with $O(\log \log n)$ measurements.

Sparse Recovery and Fourier Sampling

Lemma (IPW11)

Adaptive 1-sparse recovery takes $O(\log \log n)$ measurements.

Lemma (IPW11, PW13)

Adaptive 1-sparse recovery takes $\Theta(\log \log n)$ measurements.

Lemma (IPW11, PW13)

Adaptive 1-sparse recovery takes $\Theta(\log \log n)$ measurements.

Lemma (IPW11, PW13)

Adaptive 1-sparse recovery takes $\Theta(\log \log n)$ measurements.

Lemma (IPW11, PW13)

Adaptive 1-sparse recovery takes $\Theta(\log \log n)$ measurements.

Gives $\Theta(k \log \log(n/k))$ k-sparse recovery via general framework.

- Tight constants in compressive sensing
 - Analogous to channel capacity in coding theory.

Make sparse Fourier applicable to more problems

- Better sample complexity
- Incorporate stronger notions of structure
- Tight constants in compressive sensing
 - Analogous to channel capacity in coding theory.
 - Lower bound techniques, from information theory, should be strong enough.
