CAMBRIDGE MA 02139 USA

- Year-No. Title of Article** Author(s) *Journal or Book Title*
Volume(Number): page-range (JP Report Series edition[†])
- 2007-20.** The limits of consensus Oppenheimer *et al.*
Science 317: 1505-1506
- 07-19.** The implications of the historical decline in US
energy intensity for long-run CO₂ emission
projections Sue Wing & Eckaus *Energy Policy*
35(11): 5267-5286
- 07-18.** Unemployment effects of climate policy
Babiker & Eckaus *Environmental Science and
Policy* 10(7-8): 600-609 (Report 137)
- 07-17.** Boiled frogs and path dependency in climate
policy decisions Webster in: *Human-Induced
Climate Change: An Interdisciplinary Assessment*
Schlesinger *et al.* (eds.), Cambridge University
Press: Cambridge, UK, pp. 355-364
- 07-16.** How (and why) do climate policy costs differ
among countries? Paltsev *et al.* in: *Human-Induced
Climate Change: An Interdisciplinary Assessment*
Schlesinger *et al.* (eds.), Cambridge University
Press: Cambridge, UK, pp. 282-293
- 07-15.** Effects of air pollution control on climate:
results from an integrated assessment model Prinn
et al. in: *Human-Induced Climate Change: An
Interdisciplinary Assessment* Schlesinger *et al.*
(eds.), Cambridge University Press: Cambridge,
UK, pp. 93-102 (Report 118)
- 07-14.** Potential land use implications of a global
biofuels industry Gurgel *et al.* *Journal of
Agricultural and Food Industrial Organization*
5(2): Article 9 (Report 155)
- 07-13.** Ensemble climate prediction using climate
models and observational constraints Stott & Forest
Philosophical Transactions of the Royal Society A
365: 2028-2052
- 07-12.** Toward integrated assessment of environmental
change: air pollution health effects in the USA
Matus *et al.* *Climatic Change* DOI 10.1007/s10584-
006-9185-4 [Online First, In Press] (Report 113)
- 07-11.** Global economic effects of changes in crops,
pasture, and forests due to changing climate, carbon
dioxide, and ozone Reilly *et al.* *Energy Policy*
35(11): 5370-5383 (Report 149)
- 07-10.** Estimating probability distributions from
complex models with bifurcations: The case of
ocean circulation collapse Webster *et al.* *Journal of
Environmental System* 31(1): 1-21 (Report 133)
- 07-9.** Net emissions of CH₄ and CO₂ in Alaska:
Implications for the region's greenhouse gas budget
Zhuang *et al.* *Ecological Applications* 17(1): 203-
212
- 07-8.** Federal tax policy towards energy Metcalf in:
Tax Policy and the Economy, Vol. 21 Poterba (ed.),
MIT Press: Cambridge, MA, pp. 145-184
(Report 142)
- 07-7.** The prospects for biological carbon sinks in
greenhouse gas emissions trading systems Reilly *et al.*
in: *Greenhouse Gas Sinks* Reay *et al.* (eds.),
CABI: Wallingford, UK, pp. 115-142
- 07-6.** Climate change taxes and energy efficiency in
Japan Kasahara *et al.* *Environmental and Resource
Economics* 37(2): 377-410 (Report 121)
- 07-5.** Crop response to elevated CO₂ and world food
supply. A comment on "Food for Thought..." by
Long *et al.*, *Science* 312:1918-1921, 2006. Tubiello
et al. *European Journal of Agronomy* 26: 215-223
- 07-4.** The economic impacts of climate change:
evidence from agricultural profits and random
fluctuations in weather Deschenes & Greenstone
American Economic Review 97(1): 354-385
(Report 131)
- 07-3.** Impact of direct radiative forcing of black carbon
aerosols on tropical convective precipitation Wang
Geophysical Research Letters 34(5): L05709
- 07-2.** Future carbon regulations and current
investments in alternative coal-fired power plant
technologies Sekar *et al.* *Energy Policy* 35(2):
1064-1074 (Report 129)

- 07-1.** Mitigation of greenhouse gas emissions from land use: creating incentives within greenhouse gas emissions trading systems Reilly & Asadoorian. *Climatic Change* 80(1-2): 173-197
- 2006-11.** European greenhouse gas emissions trading: A system in transition Reilly & Paltsev in: *Economic Modelling of Climate Change and Energy Policies* De Miguel *et al.* (eds.), Elgar: Cheltenham, UK, pp. 45-64 (Report 127)
- 06-10.** The role of non-CO₂ greenhouse gases in climate policy: Analysis using the MIT IGSM Reilly *et al.* *Energy Journal* (Special Issue: *Multi-Greenhouse Gas Mitigation and Climate Policy*) pp. 503-520 (Report 114)
- 06-9.** CH₄ and CO₂ exchanges between land ecosystems and the atmosphere in northern high latitudes over the 21st century Zhuang *et al.* *Geophysical Research Letters* 33(17): L17403
- 06-8.** Incorporating carbon capture and storage technologies in integrated assessment models McFarland & Herzog *Energy Economics* 28(5-6): 632-652
- 06-7.** Analysis of variability and correlation in long-term economic growth rates Webster & Cho *Energy Economics* 28(5-6): 653-666
- 06-6.** Representing induced technological change in models for climate policy analysis Sue Wing *Energy Economics* 28(5-6): 539-562
- 06-5.** Technology and technical change in the MIT EPPA model Jacoby *et al.* *Energy Economics* 28(5-6): 610-631 (Report 111)
- 06-4.** Does model sensitivity to changes in CO₂ provide a measure of sensitivity to other forcings? Sokolov *J. Climate* 19(13): 3294-3306 (Report 119)
- 06-3.** Estimation of atmospheric methane emissions between 1996 and 2001 using a 3D global chemical transport model Chen & Prinn *Journal of Geophysical Research* 111: D10307
- 06-2.** Vehicle technology under CO₂ constraint: A general equilibrium analysis Schäfer & Jacoby *Energy Policy* 34(9): 975-985
- 06-1.** Estimated PDFs of climate system properties including natural and anthropogenic forcings Forest *et al.* *Geophysical Research Letters* 33: L01705 (Report 126)
- 2005-10.** Atmospheric modeling of high-frequency methane observations: Importance of interannually varying transport Chen & Prinn *Journal of Geophysical Research* 110: D10303
- 05-9.** A modeling study of the response of tropical deep convection to the increase of cloud condensation nuclei concentration: 1. Dynamics and microphysics. 2. Radiation and tropospheric chemistry Wang *Journal of Geophysical Research* 110(D21): D21211; 110(D22): D22204
- 05-8.** Future effects of ozone on carbon sequestration and climate change policy using a global biogeochemical model Felzer *et al.* *Climatic Change* 73(3): 345-373 (Report 103)
- 05-7.** Modeling the transport sector: The role of existing fuel taxes in climate policy Paltsev *et al.* in: *Energy & Environment* Loulou *et al.* (eds.), Springer: New York, pp. 211-238 (Report 117)
- 05-6.** Sensitivity of climate to diapycnal diffusivity in the ocean. Part I: Equilibrium state. Part II: Global warming scenario Dalan *et al.* *Journal of Climate* 18(13): 2460-2481, 2482-2496 (Report 109)
- 05-5.** Stabilization and global climate policy Sarofim *et al.* *Global and Planetary Change* 47(2-4): 266-272 (Report 110)
- 05-4.** Technology detail in a multi-sector CGE model: Transport under climate policy Schäfer & Jacoby *Energy Economics* 27(1): 1-24 (Report 101)
- 05-3.** Climate change policy, market structure, and carbon leakage Babiker *Journal of International Economics* 65(2): 421-445
- 05-2.** Thermohaline circulation stability: A box model study. Part I: Uncoupled model. Part II: Coupled atmosphere-ocean model Lucarini & Stone *Journal of Climate* 18(4): 501-513, 514-529 (Report 99)
- 05-1.** *Book Review:* Why carbon fuels will dominate the 21st century's global energy economy (P.R. Odell) Ellerman *Energy Policy* 33(18): 2411-2412
- 2004-10.** Climate prediction: The limits of ocean models Stone; Complexities in the climate system and uncertainties in forecasts Prinn; Modeling human-climate interaction Jacoby in: *State of the Planet: Frontiers and Challenges in Geophysics* Sparks & Hawksworth (eds.), AGU Monograph: Washington DC, pp. 259-267; 297-305; & 307-317

- 04-9.** Methane fluxes between terrestrial ecosystems and the atmosphere at northern high latitudes during the past century: A retrospective analysis with a process-based biogeochemistry model Zhuang *et al.* *Global Biogeochemical Cycles* 18(3): GE3010 (Report 108)
- 04-8.** Representing energy technologies in top-down economic models using bottom-up information McFarland *et al.* *Energy Economics* 26(4): 685-707 (Report 89)
- 04-7.** Informing climate policy given incommensurable benefits estimates Jacoby *Global Environmental Change A* 14(3): 287-297 (Report 107)
- 04-6.** Nonlinearities, feedbacks and critical thresholds within the Earth's climate system Rial *et al.* *Climatic Change* 65(1-2): 11-38
- 04-5.** Ozone effects on net primary production and carbon sequestration in the conterminous U.S. using a biogeochemistry model Felzer *et al.* *Tellus B* 56(3): 230-248 (Report 90)
- 04-4.** Is emissions trading always beneficial? Babiker *et al.* *Energy Journal* 25(2):33-564 (Report 93)
- 04-3.** A note on weak double dividends Metcalf *et al.* *Topics in Economic Analysis & Policy* 4(1): Article 2
- 04-2.** A modeling study of the climate impacts of black carbon aerosols Wang *Journal of Geophysical Research* 109(D3): D03106 (Report 84)
- 04-1.** The safety valve and climate policy Jacoby & Ellerman *Energy Policy* 32(4): 481-491 (Report 83)
- 2003-13.** The costs of the Kyoto Protocol in the European Union Viguier *et al.* *Energy Policy* 31(5):394-483 (Report 70)
- 03-12.** Absolute vs. intensity-based emission caps Ellerman & Sue Wing *Climate Policy* 3(Supplement 2): S7-S20 (Report 100)
- 03-11.** Uncertainty analysis of climate change and policy response Webster *et al.* *Climatic Change* 61(3): 295-430 (Report 95)
- 03-10.** Communicating climate change uncertainty to policy-makers and the public Webster *Climatic Change* 61(1-2): 1-8
- 03-9.** Modeling non-CO₂ greenhouse gas abatement Hyman *et al.* *Environmental Modeling & Assessment* 8(3): 175-186 (Report 94)
- 03-8.** Assessing the impact of carbon tax differentiation in the EU Babiker *et al.* *Environmental Modeling & Assessment* 8(3): 187-197 (Report 74)
- 03-7.** Feedbacks affecting the response of the thermohaline circulation to increasing CO₂ Kamenkovich *et al.* *Climate Dynamics* 21(2): 119-130 (Report 75)
- 03-6.** Ocean heat uptake in transient climate change: Mechanisms and uncertainty due to subgrid-scale eddy mixing Huang *et al.* *Journal of Climate* 16(20): 3344-3356
- 03-5.** Sensitivities of deep-ocean heat uptake and heat content in an OGCM with idealized geometry Huang *et al.* *Journal of Geophysical Research* 108(C1): 3015 (Report 87)
- 03-4.** Tax distortions and global climate policy Babiker *et al.* *Journal of Environmental Economics and Management* 46: 269-287 (Report 85)
- 03-3.** Comparing oceanic heat uptake in AOGCM transient climate change experiments Sokolov *et al.* *Journal of Climate* 16(10): 1573-1582 (Report 81)
- 03-2.** The deep-ocean heat uptake in transient climate change Huang *et al.* *Journal of Climate* 16(9): 1352-1363 (Report 88)
- 03-1.** An issue of permanence: Assessing the effectiveness of temporary carbon storage Herzog *et al.* *Climatic Change* 59(3): 293-310 (Report 92)
- 2002-9.** Towards a definition of climate science Lucarini *International Journal of Environment and Pollution* 18(5): 413-422
- 02-8.** The Kyoto Protocol and non-CO₂ greenhouse gases and carbon sinks Reilly *et al.* *Environmental Modeling & Assessment* 7(4): 217-229 (Report 58)
- 02-7.** An efficient climate model with a 3D ocean and statistical-dynamical atmosphere Kamenkovich *et al.* *Climate Dynamics* 19(7): 585-598 (Report 60)
- 02-6.** Human influence on climate Forest *et al.* *Forum for Applied Research & Public Policy* Summer: 195-206 (Report 68)
- 02-5.** The evolution of a climate regime: Kyoto to Marrakech and beyond Babiker *et al.* *Environmental Science and Policy* 5(3): 195-206 (Report 82)
- 02-4.** Rethinking the Kyoto emissions targets Babiker & Eckaus *Climatic Change* 54(4): 399-414 (Rpt 65)

- 02-3.** Uncertainty in emissions projections for climate models Webster *et al.* *Atmospheric Environment* 36(22): 3659-3670 (Report 79)
- 02-2.** The curious role of “learning” in climate policy: Should we wait for more data? Webster *Energy Journal* 23(2): 97-119 (Report 67)
- 02-1.** Quantifying uncertainties in climate system properties with the use of recent climate observations Forest *et al.* *Science* 295(5552): 113-117 (Report 78)
- 2001-8.** Constraining climate model properties using optimal fingerprint detection methods Forest *et al.* *Climate Dynamics* 18(3/4): 277-295 (Report 62)
- 01-7.** Dis-crediting ocean fertilization Chisholm *et al.* *Science* 294: 309-310
- 01-6.** Nutrient gradients in the western N. Atlantic Ocean Cavender-Bares *et al.* *Deep Sea Research I* 48(11): 2373-2395
- 01-5.** The US SO₂ allowance trading program Ellerman *Revue de l’Energie* 157: 315-320 (Rpt 69)
- 01-4.** Uncertainty and climate change assessments Reilly *et al.* *Science* 293(5529): 430-433
- 01-3.** Le defi europeen: Issues in the implementation of greenhouse gas emissions trading in Europe Ellerman *Revue de l’Energie* 524: 105-111 (Rpt 69)
- 01-2.** Getting climate policy on track after The Hague Jacoby & Reiner *International Affairs* 77(2): 297-312
- 01-1.** Climate impasse: How The Hague negotiations failed Reiner *Environment* 43(2): 36-43
- 2000-12.** Reducing the uncertainty in the contribution of Greenland to sea-level rise in the 20th and 21st centuries Bugnion *Annals of Glaciology* 31: 121-125
- 00-11.** Stirring times in the Southern Ocean Chisholm *Nature* 407: 685-687
- 00-10.** Constraining uncertainties in climate models using climate change detection techniques Forest *et al.* *Geophysical Research Letters* 27(4): 56972 (Report 47)
- 00-9.** Iron limits the cell division rate of *Prochlorococcus* in the eastern equatorial Pacific Mann & Chisholm *Limnology and Oceanography* 45(5): 1067-1076
- 00-8.** Supplimentary: An invitation to monopsony? Ellerman & Sue Wing *Energy Journal* 21(4): 29-59 (Report 59)
- 00-7.** A game of climate chicken: *Can EPA regulate GHGs before the U.S. Senate ratifies the Kyoto Protocol?* Bugnion & Reiner *Environmental Law* 30(3): 491-525 (Report 57)
- 00-6.** Japanese nuclear power and the Kyoto agreement Babiker *et al.* *Journal of Japanese and International Economies* 14: 169-188 (Report 51)
- 00-5.** Linking local air pollution to global chemistry and climate Mayer *et al.* *Journal of Geophysical Research* 105(D18): 22,869-22,896 (Report 63)
- 00-4.** A methodology for quantifying uncertainty in climate projections Webster & Sokolov *Climatic Change* 46(4): 417-446 (Report 37)
- 00-3.** Irreversibility, uncertainty, and learning: portraits of adaptation to long-term climate change Reilly & Schimmelpfennig *Climatic Change* 45: 253-78
- 00-2.** The Kyoto Protocol and developing countries Babiker *et al.* *Energy Policy* 28: 525-536 (Report 56)
- 00-1.** Factors affecting heat transport in an ocean general circulation model Kamenkovich *et al.* *Journal of Physical Oceanography* 30(1):175-194
- 1999-15.** Transient climate change and potential croplands of the world in the 21st century Xiao *et al.* *Sistema Terra: Remote Sensing & the Earth* 8(1-3): 96-109 (Report 18)
- 99-14.** Adjusting to policy expectations in climate change modeling: *An interdisciplinary study of flux adjustments in coupled AOGCMs* Shackley *et al.* *Climatic Change* 43(2): 413-454 (Report 48)
- 99-13.** Agricultural impact assessment, vulnerability, and the scope for adaptation Reilly & Schimmelpfennig *Climatic Change* 43(4): 745-788
- 99-12.** Multi-gas assessment of the Kyoto Protocol Reilly *et al.* *Nature* 401: 549-555 (Report 45)

- 99-11.** Impact of emissions, chemistry and climate on atmospheric carbon monoxide: 100-year predictions from a global chemistry-climate model Wang & Prinn *Chemosphere—Global Change Science* 1(1-3): 73-81 (Report 35)
- 99-10.** The role of science in policy: *The climate change debate in the United States* Skolnikoff *Environment* 41(5): 16-20, 42-45
- 99-9.** Tradable emissions rights and joint implementation for greenhouse gas abatement: *A look under the hood* Schmalensee; AND *A Commentary* Prinn in: *The Impact of Climate Change Policy on Consumers: Can Tradable Permits Reduce the Cost?* Walker *et al.* (eds.), ACCFCPR: Washington DC, pp. 39-55; & 65-71
- 99-8.** Obstacles to global CO₂ trading: *A familiar problem* Ellerman in: *Climate Change Policy: Practical Strategies to Promote Economic Growth and Environmental Quality* Walker *et al.* (eds.), ACCFCPR: *ibid.*, pp. 119-132 (Report 42)
- 99-7.** The uses and misuses of technology development as a component of climate policy Jacoby in: *Climate Change Policy (ibid.)* pp. 151-169 (Rpt 43)
- 99-6.** Sequential climate decisions under uncertainty: *An integrated framework* Valverde *et al.* *Environmental Modeling and Assessment* 4: 87-101 (Report 38)
- 99-5.** Adjustment time, capital malleability, and policy cost Jacoby & Sue Wing *Energy Journal* (Special Issue: *The costs of the Kyoto Protocol*) pp. 73-92
- 99-4.** Integrated global system model for climate policy assessment: *Feedbacks and sensitivity studies* Prinn *et al.* *Climatic Change* 41(3/4): 469-546 (Report 36)
- 99-3.** Interhemispheric thermohaline circulation in a coupled box model Scott *et al.* *Journal of Physical Oceanography* 29(3): 351-365
- 99-2.** Global thermohaline circulation (THC). Part II: *Sensitivity with interactive atmospheric transports* Wang *et al.* *Journal of Climate* 12: 83-91
- 99-1.** Global THC. Part I: *Sensitivity to atmospheric moisture transport* Wang *et al.* *Journal of Climate* 12: 71-82
- 1998-7.** Uncertainty in the oceanic heat and carbon uptake and its impact on climate projections Sokolov *et al.* *Geophysical Research Letters* 25(19): 3603-3606 (Report 23)
- 98-6.** Transient climate change and net ecosystem production of the terrestrial biosphere Xiao *et al.* *Global Biogeochemical Cycles* 12(2): 345-360 (Report 28)
- 98-5.** A global interactive chemistry and climate model: *Formulation and testing* Wang *et al.* *Journal of Geophysical Research* 103(D3): 3399-3417 (Report 24)
- 98-4.** A flexible climate model for use in integrated assessments Sokolov & Stone *Climate Dynamics* 14: 291-303 (Report 17)
- 98-3.** World carbon dioxide emissions: 1950-2050 Schmalensee *et al.* *Review of Economics and Statistics* 80: 15-27 (Report 5)
- 98-2.** Kyoto's unfinished business Jacoby, Prinn & Schmalensee *Foreign Affairs* 77(4): 54-66 (Rpt 32)
- 98-1.** Parameterization of urban sub-grid scale processes in global atmospheric chemistry models Calbo *et al.* *Journal of Geophysical Research* 103(D3): 3437-3467 (Report 20)
- 1997-3.** Linking a global terrestrial biogeochemical model with a 2-D climate model: *Implications for global carbon budget* Xiao *et al.* *Tellus B* 49: 18-37
- 97-2.** What does stabilizing greenhouse gas concentrations mean? Jacoby *et al.* in: *Critical Issues in the Economics of Climate Change* Flannery *et al.* (eds.), IPECA: London (Report 14)
- 97-1.** CO₂ emissions limits: *Economic adjustments and the distribution of burdens* Jacoby *et al.* *Energy Journal* 18(3): 31-58 (Report 9)
