The mission of the MIT Council on Educational Technology (MITCET) is to enhance the quality of MIT education by encouraging the appropriate application of technology, both on and off campus.

The Council provides continuous strategic guidance and vision of MIT institutional activities concerning the application of information technology to education, and it advises the Provost on priorities, policies, and new opportunities. In advising the Provost, MITCET will serve as the voice of the faculty in reporting to the Information Technology Governance Committee (ITGC) concerning educational technology issues within the broader context of the Institute's information technology activities.

The Council will coordinate the work of the advisory committees that oversee major MIT educational technology initiatives and services (OCW, DSpace, Accord, Learning Management Systems etc). It will provide advice, acting as the voice of the faculty, when requested by the Dean for Undergraduate Education.
