Welcome to Guild Camp V! You are going to take a game from initial concept to run in two weeks. This is a significant commitment; you’ll probably be spending two to three hours a day working on your game, plus plenty of extra time on weekends and other select days.

**Things You Will Need To Do**
- Form a GM team.
- Get a basic concept for a game.
- Decide on the game’s length and size.
- Fill the game with characters and plots (not necessarily in that order).
- Design the details of plots and mechanics, and balance resources.
- Write the sheets.
- Write all the other stuff (don’t forget rules, abilities, items, signs...).
- Write and send an application.
- Cast your game.
- Print and hand out your game.
- Set up your game.
- Run your game.

For Guild Camp, your game probably wants to be two to four hours long. In a four-hour one-night, characters usually spend the first hour or so getting to know each other and the last hour or so running around frantically (assuming the game has critical mass of plot), so most plots only need to provide a couple hours of entertainment. In a two hour game, there is even less time. Everyone should probably have about one thing to get done (which should probably require other people) and a couple of things that other people need them for.

A one-night generally has about fifteen to twenty parts, though some go a bit larger or smaller. The amount of work required to write a one-night is more closely related to the number of characters than the length of the game.

You need to accomplish three things today: form a GM team, have a basic concept for your game, including length and size, and have a rough work schedule for the next two weeks.

**Things We Can Help You With**
- Zampolit requirement.
- Administrative tasks, like your app.
- Technical support, including production.
- Coming up with a writing schedule.
- Helping you not forget things.
- Room reservations (already done).

We’ve asked the High Council to reserve the 24/26/28/34/36 gamespace for most of Saturday the 24th and Sunday the 25th. Plan to run game on one of those days. Collectively, we (Beth Baniszewski, Ken Clary, and Dennis Perepelitsa) will serve as your zampolits (liaisons between your GM team and the High Council).
**Forming a GM Team** You’ll probably want a team with two to four people. Generally speaking¹, you’ll want a team with one or more motivators, one or fewer control freaks, and one or fewer flakes. For a Guild Camp game with a tight schedule, avoid flakage entirely.

You should form a GM team with other people interested in writing the same kind of game as you. This means you usually want to have an idea of the game you want to write before you form a team. Once you form a team, the idea will probably change; this is a normal aspect of design.

It is convenient if the schedules of different GMs match up. If they don’t, make sure you have means of regular communication and collaboration.

**Getting Your Game Done** There are three basic stages of game writing: design, writing, and production. These will overlap somewhat, though for a tight schedule, you should commit to design decisions as early as possible.

Design is more than coming up with basic ideas. You need to balance plots and mechanics, come up with the challenges facing your characters, and make sure everyone has enough to do. You need the details of your scenario and rules. You should come up with how gamespace will be laid out (unfortunately, many GM teams don’t find flaws in their gamespace until production).

Writing is more than writing sheets. A plot is not written until every aspect of it is implemented: a research scientist needs a research mechanic and abilities and items for research in addition to motivation. An economic plot needs a complete economy, including things to be traded (in specific numbers) with supply and demand. Mechanics need all of the abilities, items, memory packets, signs, etc. to be implemented. Writing sheets is more than just producing prose: you need to cross-reference plots and facts and make sure all important details are covered.

Production is ideally just a matter of printing and stuffing everything, but it is also the time you discover all the things you’ve forgotten to write. If you haven’t planned ahead, you’ll be proofreading, debugging, and (re)writing, all at the last minute.

After production, you’ll have handout (did you remember to write rules?), set-up, and runtime, all of which are non-trivial. Before production, you’ll need to cast your game (which will take longer than you expect), which requires sending out an app a few days ahead of time. Also, after handout, you’ll have player questions and other issues to deal with, which will further distract you from finishing work.

**Some Ideas** Your game needs a scenario to exist in, and plots to keep your players busy. To help you jump-start the design and writing process, here are a few ideas you might use. Most of them are good for a short game (long games are harder to design because their plots need to be stable for much longer periods of time). Especially for a two-hour game, characters will need to be jump-started in their plots.

**Sample Scenarios**
- Starlight 3: In the future, travellers are stranded upon a very small spaceship. A serial killer is among them. There are technical problems with the ship. Paranoia ensues.
- Hotel Transylvania 2: Dracula-style horror, mystery, and skullduggery.
- Turn of the (19th) century on the Orient Express. International secret agents abound.
- A spy game set at the Olympics. Athletes double as secret agents, being sketchy between competitions. Drugs and doping.

---

¹From Jeremy Brown’s Ides talk of old
- An eccentric, reclusive scientist invites his peers, businessmen, reporters and (unknowingly) spies to his mansion for the unveiling of a revolutionary invention. When everybody arrives, things are not what they seem, or something goes horribly awry.
- Victorian Europe. Strict cultural norms and rules. Social politics abound among the aristocracy.
- High-school prom! Vicious social circles, cheerleaders, prom kings and queens, football stars, nerds, stern principals. Maybe add weirdshit.
- Clue: A murder mystery set in a mansion. An old mutual friend is dead. Alibis must be fabricated, and his will examined.
- Amnesia game. At the start of game, everybody slowly starts remembering who they are...

Sample Plots
- Someone needs money for debt with a tight deadline.
- Someone needs to steal something.
- There’s an umbrella everybody wants that’s hard to get to.
- There’s an umbrella everybody wants that’s easy to get to.
- Heavily armed people that don’t trust each other are stuck together and something bad is going on.
- Taming of the shrew: person who wants some other person who hates them.
- Three or so people in a race. They all know they’re in a race but not with whom.
- Someone with resources is trying to play both sides of a conflict.
- Someone is trying to get revenge but they are in disguise.
- Someone knows everything except the one thing they need to know (and/or someone knows nothing but that one thing).
- Someone knows a lot but is incapable of acting (and/or someone can act but knows nothing).
- People are trying to make a deal but are trying to convince other people to give things up first.
- Two rivals want to kill each other.
- One person wants to kill everybody (without being caught) and isn’t well armed.
- Generic resource allocation plot: there’s a pie. Many people want pieces, and there aren’t enough to go around.
- Prisoner’s dilemma.
- Three people, only two of whom can win, are all working together (and/or they all hate each other).
- Everybody wants to kill somebody with strong protection. That person wants to win them over.
- Someone is hunting for someone else.
- Someone needs to perform a complicated sketchy ritual.
- “The only people you can trust are the ones that need you.”
