

JOB OPENING: RENEWABLE ENERGY ASSOCIATE

BlueWave Strategies is a team of dedicated environmental professionals who work as advisors, and in some cases as equity partners, on a wide range of environmental projects, with a focus on real estate development and renewable energy ventures. Our extensive knowledge of environmental and energy technologies, law, regulation, and economics, combined with strong professional relationships with key political, regulatory, business, and non-profit leaders, has helped our partners and clients achieve significant economic returns and environmental results on a diverse array of ventures. For more information, on BlueWave Strategies and our projects, please visit, www.bluewavestrategies.com.

BlueWave is seeking a highly motivated Associate to work with our team to undertake the following types of tasks in support of the firm's rapidly growing Renewable Energy practice:

- Perform technical and financial feasibility studies for solar and wind energy projects;
- Perform research and analysis on renewable energy-related business and policy activities;
- Assist in writing grant and other applications for state and federal renewable energy incentive programs;
- Assist in project management and procurement for solar installations;
- Assist in community outreach and creating educational programming for renewable energy projects working with local schools and community groups;
- Provide marketing support for solar and other renewable energy marketing initiatives;
- Support on-going policy analysis activities (e.g., tracking issues such as energy bills, RGGI, carbon markets, etc.);
- Provide ad hoc support on solar and wind energy investment projects; and
- Undertake marketing/business development efforts for wind and solar feasibility studies and other renewable energy opportunities.

Qualifications

Candidates must have an undergraduate degree and one to five years of experience in renewable energy project development and/or policy analysis. A master's degree in policy, business, environmental or energy-related fields is preferred. It is absolutely critical that candidates have strong quantitative analysis skills (with an emphasis on economic analysis) as well as superior writing and oral communication skills. BlueWave is a small, entrepreneurial firm with a demanding and dynamic office environment – it is therefore also essential that candidates be highly motivated “team players” with a desire to help build a growing practice.
