

**Job Title:** Project Manager – New York

**Location:** New York

**Travel:** 10% to 20%

**Relocation:** No

**Job Type:** Full Time

**Instructions:** To apply, send an e-mail with cover letter and resume to [jobs@enernoc.com](mailto:jobs@enernoc.com) with the “Project Manager – New York” in the subject line.

#### Position Description:

EnerNOC has an immediate need for **Project Managers** to support our operations in New York . Project Managers provide oversight and relationship management for high-visibility energy management hardware and software deployment projects throughout New York . Each assignment requires the coordination among multiple parties including the customer, electrical contractors, electricity marketplace administrators, permitting and regulatory officials, and EnerNOC staff. Project managers are also expected to become fully conversant in the New York electricity market and all associated regulations.

Candidates will have a track record of successfully managing multiple parallel short-term projects while communicating project status and expectations both in and out of the organization. Attention to detail and follow-up is essential to the success of this role, and candidates must possess a minimum of three years of proven experience in related roles.

#### Key Responsibilities:

- Manage all aspects of the customer experience at EnerNOC, including assistance with energy management services, installation of EnerNOC Site Server hardware/software at customer facilities, and continual customer communication
- Work with the field operations team to optimize metering configurations to best serve our customers
- Fully understand contractual and regulatory issues relating to the regional grid operator, our customers, and other parties
- Troubleshoot various components related to energy management including but not limited to networking devices, control & monitoring systems, automatic transfer switches, and backup generators
- Represent a team who strives for Operational Excellence and first-class Customer Service
- Effective communication skills are critical and required

#### Required Qualifications/Skills/Education:

- BA/BS in engineering, sciences, statistics, mathematics, economics, computer science, or other related fields
- A minimum of three years experience specifically relating to energy management or energy systems through consulting, project or construction management, or other relevant experience
- A proven track record demonstrating the ability to work in a fast paced, forward moving environment with the ability to quickly learn new technology
- Outstanding communication skills with the proven ability to utilize these skills across groups within and outside the organization
- Strong problem-solving and organizational skills

- Broad understanding of business considerations associated with our installations
- Ability to apply creativity and objectivity while solving technical problems
- Ability to travel locally as needed

**Desired Qualifications/Skills/Education:**

- Computer and networking experience
- Electrical or other engineering, design, or project contracting experience
- Certified Energy Manager certification is a benefit but not required
