Your partner and both opponents are expert players, in this matchpoint pair game. Playing standard carding in this new partnership, you lead the $\vee 5$. Dummy plays small and partner wins the $\odot \mathrm{A}$, declarer following with the $\odot 3$.

After some thought, partner cashes the $\boldsymbol{\&} \mathrm{A}$, declarer following with the $\boldsymbol{\&} 4$, and leads the $\diamond 9$. You win declarer's $\diamond \mathrm{Q}$ with the $\diamond \mathrm{A}$. How do you continue?

Your partner and both opponents are experts, in this matchpoint pair game. Playing standard carding in this new partnership, you lead the $\odot 5$. Dummy plays small and partner wins the $\odot \mathrm{A}$.

After some thought, partner cashes the \& A. This is a highly unusual play, establishing dummy's clubs, with the A J a likely entry. Preempters also have been known to have voids - leading the $\boldsymbol{*}$ A could have been a disaster. Think of this play as an "alarm clock" lead. Wake up and take notice!

Partner now leads the $\diamond 9$, and you win declarer's $\diamond \mathrm{Q}$ with the $\diamond \mathrm{A}$. What do you make of that? The lead of the high card says, "do not return this suit." Partner would have led low, to ask for a diamond back.

Partner clearly wants something special from you, and in this case, it must be a ruff. Can it be in diamonds? No, because that would give declarer six diamonds, along with at least six spades, a heart and a club. So returning a trump or a diamond is clearly wrong.

Did partner have the singleton ace of hearts or clubs? In either case, declarer will have four cards in that suit, and likely a singleton in the other. Go back to the opening lead. Declarer knows partner has the $\triangle \mathrm{A}$, since you would not underlead it. You are looking at the $\odot \mathrm{Q}$. If declarer had a singleton heart, would he not put in the $\bigcirc$ J, hoping to establish the $\odot \mathrm{K}$ for a discard? Declarer has likely ducked to $\odot 9743$. Lead a heart. Obtaining this fourth trick holds declarer to 140, a fine defensive score.

If you would have returned a club, at least you were thinking along the right lines. Had declarer played the $\odot \mathrm{J}$ at trick one, a club could well have been the correct return.
