Import Shapes Troubleshooting: Change model's category or delete model

How to change a model's category or delete it from StarLogo TNG.

**Diagnosing the problem**

You forgot to or put the imported model in the wrong category.
You changed your mind about a model and want to delete it from StarLogo TNG.

**Navigate to the models folder**

First locate the StarLogo TNG program folder. Double click on the models folder. You'll see a list of folders named for each category. Double-click on the category where your model is saved.
Locate the folder name of your model

Find the folder with the name you gave when you imported the model. If you want to move the model to a different category, "cut" the folder. If you want to remove the model, delete the folder.

Paste into the correct category

If you're moving a model from one category to another, go up a level to the categories folders, double-click on the correct category folder, and then "paste" the folder into this category.
Check

Quit the StarLogo TNG program and start it up again. Open the breed editor and check that the model is in the correct category and/or is deleted from the previous category.
