

Frigidaire

Air handlers Standard and variable speed

Features and Benefits

- Peace of mind warranty — 8 years on all parts
- Fully Insulated Cabinet — Completely insulated for whisper-quiet operation
- Multi-poised — May be used in horizontal, upflow, downflow or vertical applications (vertical-only units also available)
- Plug-in Wire Connections — Make the air handler easier to service
- Filter Panel — Provides easy front access for cleaning the air filter
- Satin-finished Pre-coat Paint — Provides excellent durability and scratch resistance ensures total corrosion resistance
- Breaker Accessibility — Breaker easily serviced from front of unit when heater is applied
- Plastic Drain Pan — Plastic pan ensures total corrosion resistance
- Multi-speed motor may be adjusted to exact blower speed needed for any application

With a Frigidaire air conditioner or heat pump coupled with a Frigidaire air handler, you expect quality, dependability, energy-efficiency, value and comfort. And that's exactly what you get from Frigidaire, where we're creating a better tomorrow with our products and people.

When choosing an air handler, look at not only the product but also at the service and support provided by your dealer. Frigidaire dealers receive extensive training in the installation and care of your equipment. That means your Frigidaire dealer can not only help you select the right air handler for your home, but also help you keep it in top operating condition.

Our standard air handler features the multi-speed motor which can be adjusted to the exact blower speed needed for any application. But what would you say if you were told you could improve the efficiency of your heating and cooling system? Most likely, you'd want to find out how.

Selecting a variable speed delivery air handler instead of a standard multi-speed unit can keep you even more comfortable and significantly improve overall system efficiency, indoor air quality and sound levels.

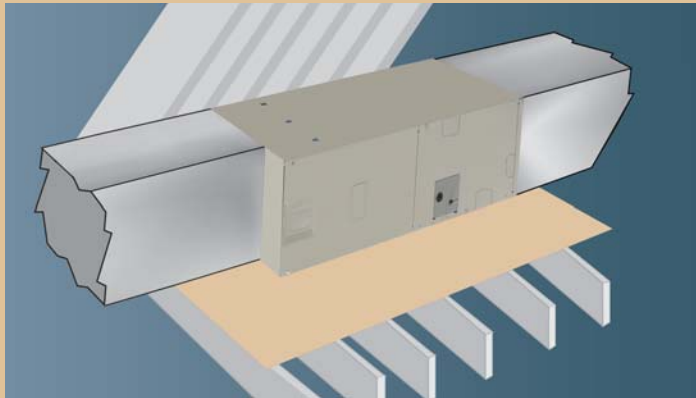

Frigidaire

Variable speed air handler

All of the benefits of the standard air handler, plus...

1. **Microprocessor** controls the gradual start-up and shutdown of the blower for maximum efficiency
2. **Automatically** adjusts from high to low speed, providing whisper-quiet operation
3. **Operates** with longer cycles for maximum humidity control
4. **Heavy-duty** insulation for maximum sound control
5. **Minimizes** air stratification by mixing air from floor to ceiling
6. **Continuous** low-speed operation allows optimum comfort and air filtration

Horizontal Configuration for all multi-poise air handlers

For more information, call or write your Frigidaire dealer:

Along with optimum efficiency, a variable speed air handler will enhance overall air quality by minimizing air stratification or stagnant air. It mixes air from floor to ceiling, creating a more uniform temperature and enhancing your comfort. Filtration and humidity removal is also improved as airborne particles and moisture are captured more effectively. Best of all, you'll enjoy all of these benefits with whisper-quiet sound quality. Ask your Frigidaire dealer how you can increase your home comfort with a variable speed air handler from Frigidaire.

When an air handler is truly built to exacting standards of quality and durability, the manufacturer's confidence shows in its warranty. At Frigidaire we offer an eight-year

warranty on all parts and a five-year

quality pledge.

Extended product

protection is available. Ask your Frigidaire dealer for specific details on warranties, utility rebates, and consumer financing programs.
