TO: ALL OEM CUSTOMERS

5F,H COMPRESSORS

Carlyle Compressor announced a number of important improvements to our 5F,H compressors in OEM-125, dated July, 1990. A copy is, again, attached for your reference. This bulletin will supply the back-up information on the 5F,H product improvements.

New 3-Year Warranty

A detailed warranty policy statement covering our new 3-year 5F,H warranty is attached.

5F/5H Direct Drive & Belt Drive Units

To cover the introduction of 5F & 5H belt drive and direct drive units, the following information is attached:

- A. Part numbers and price pages covering these new direct & belt drive units.
- B. Outline drawings covering these new direct & belt drive units.
- C. Motor fastening sets will also be available for both direct and belt drive units. Price pages and specifications covering these fastening sets are attached.

Factory Installed Accessories

As announced in July, Carlyle Compressor will make available factory installed water-cooled heads and external solenoid unloading (on 5H compressors). In addition, based on field comments, we are also making factory installed water-cooled oil coolers available. Price pages covering these new factory installed accessories are attached. Also supplied is a model number significance chart covering the new designations for compressors or base units with these factory installed accessories.

We believe these new improvements will make our 5F,H open compressors even more attractive in the future. Please contact Carlyle Compressor headquarters, in Syracuse, if you have any questions on the attached information.
