Preface	ix
Part I: Basics	xv
1 A brief introduction	1
1.1 The road to unification	1
1.2 String theory as a unified theory of physics	5
1.3 String theory and its verification	7
2 Special Relativity and Extra Dimensions	11
2.1 Units and parameters	11
2.2 Intervals and Lorentz transformations	13
2.3 Light-cone coordinates	20
2.4 Relativistic energy and momentum	24
2.5 Light-cone energy and momentum	26
2.6 Lorentz invariance with extra dimensions	28
2.7 Compact extra dimensions	29
2.8 Quantum mechanics and the square well	33
2.9 Square well with an extra dimension	35
Problems	37
3 Electromagnetism and Gravitation	41
3.1 Classical electrodynamics	41
3.2 Electromagnetism in three dimensions	43
3.3 Manifestly relativistic electrodynamics	44
3.4 An aside on spheres in higher dimensions	48
3.5 Electric fields in higher dimensions	51
3.6 Gravitation and Planck's length	54
3.7 Gravitational potentials	58
3.8 The Planck length in various dimensions	59
3.9 Gravitational constants and compactification	60
3.10 Large extra dimensions	62

Problems	65
4 Non-relativistic Strings	69
4.1 Equations of motion for transverse oscillations	69
4.2 Boundary conditions and initial conditions	71
4.3 Frequencies of transverse oscillation	73
4.4 More general oscillating strings	74
4.5 A brief review of Lagrangian mechanics	74
4.6 The non-relativistic string Lagrangian	77
Problems	81
5 The Relativistic Point Particle	85
5.1 Action for a relativistic point particle	85
5.2 Reparameterization invariance	89
5.3 Equations of motion	90
5.4 Relativistic particle with electric charge	94
Problems	95
6 Relativistic Strings	97
6.1 Area functional for spatial surfaces	97
6.2 Reparameterization invariance of the area	100
6.3 Area functional for spacetime surfaces	103
6.4 The Nambu-Goto string action	107
6.5 Equations of motion, boundary conditions and D-branes	109
6.6 The static gauge	112
6.7 Tension and energy of a stretched string	115
6.8 Action in terms of transverse velocity	117
6.9 Motion of open string endpoints	120
Problems	122
7 String Parameterization and Motion	125
7.1 Choosing a σ parameterization	125
7.2 Physical interpretation of the string equation of motion	127
7.3 Wave equation and constraints	129
7.4 General motion of an open string	132
Problems	137
8 World-sheet Currents	141
8.1 Electric charge conservation	141
8.2 Conserved charges from Lagrangian symmetries	142
8.3 Conserved currents on the world-sheet	146
8.4 The complete momentum current	148
8.5 Lorentz symmetry and associated currents	151

8.6	The slope parameter α'	154
	Problems	156
9	Light-cone Relativistic Strings	159
9.1	A class of choices for τ	159
9.2	The associated σ parameterization	162
9.3	Constraints and wave equations	166
9.4	Wave equation and mode expansions	168
9.5	Light-cone solution of equations of motion	171
	Problems	175
10	Light-cone Fields and Particles	177
10.1	Introduction	177
10.2	An action for scalar fields	178
10.3	Classical plane-wave solutions	180
10.4	Quantum scalar fields and particle states	183
10.5	Maxwell fields and photon states	189
10.6	Gravitational fields and graviton states	192
	Problems	196
11	Relativistic Quantum Particle	199
11.1	Light-cone point particle	199
11.2	Heisenberg and Schrödinger pictures	201
11.3	Quantization of the point particle	203
11.4	Quantum particle and scalar particles	208
11.5	Light-cone momentum generators	209
11.6	Light-cone Lorentz generators	212
	Problems	216
12	Quantum Open Strings	219
12.1	Light-cone Hamiltonian and commutators	219
12.2	Commutation relations for oscillators	223
12.3	Strings as harmonic oscillators	229
12.4	Transverse Virasoro operators	233
12.5	Lorentz generators	244
12.6	Constructing the state space	247
12.7	Equations of motion	253
12.8	Tachyons and D-brane decay*	254
	Problems	259

13 Quantum Closed Strings	265
13.1 Mode expansions and commutation relations	265
13.2 Closed string Virasoro operators	271
13.3 Closed string state space	275
13.4 String coupling and the dilaton	279
13.5 A brief look at superstring theories*	281
Problems	288
 Part II: Developments	 293
14 D-branes and Gauge Fields	295
14.1 Dp -branes and boundary conditions	295
14.2 Quantizing open strings on Dp -branes	297
14.3 Open strings between parallel Dp -branes	303
14.4 Strings between parallel Dp - and Dq -branes	310
14.5 Intersecting D6-branes	316
Problems	323
 15 String Charge, Electric Charge, and Particle Physics	 329
15.1 Fundamental string charge	329
15.2 Visualizing string charge	335
15.3 Strings ending on D-branes	338
15.4 D-brane charges	344
15.5 D-branes and the Standard Model gauge group	346
15.6 Open strings and the Standard Model fermions*	352
15.7 The Standard Model on intersecting D6-branes*	361
15.8 String theory and particle physics*	368
Problems	371
 16 String Thermodynamics and Black Holes	 377
16.1 A review of statistical mechanics	377
16.2 Partitions and the quantum violin string	380
16.3 Hagedorn temperature	388
16.4 Relativistic particle partition function	389
16.5 Single string partition function	391
16.6 Black holes and entropy	395
16.7 Counting states of a black hole*	400
16.8 A string theory/gauge theory correspondence*	404
Problems	410

17 T-Duality of Closed Strings	415
17.1 Duality symmetries and Hamiltonians	415
17.2 Winding closed strings	418
17.3 Left movers and right movers	421
17.4 Quantization and the double strike	423
17.5 Constraint and mass formula	425
17.6 State space of compactified closed strings	427
17.7 A striking spectrum coincidence	431
17.8 Duality as a full quantum symmetry	433
Problems	437
18 T-Duality of Open Strings	441
18.1 T-duality and D-branes	441
18.2 $U(1)$ gauge transformations	445
18.3 Wilson lines on circles	447
18.4 Open strings and Wilson lines	451
Problems	455
19 Electromagnetic Fields on D-branes	457
19.1 Maxwell fields coupling to open strings	457
19.2 D-branes with electric fields	460
19.3 D-branes with magnetic fields	465
Problems	472
20 Nonlinear Electrodynamics	475
20.1 The framework of nonlinear electrodynamics	475
20.2 Born-Infeld electrodynamics	480
20.3 Born-Infeld theory and T-duality	485
Problems	489
21 Covariant String Quantization	495
21.1 Introduction	495
21.2 Open string Virasoro operators	497
21.3 Selecting the quantum constraints	499
21.4 Lorentz covariant state space	505
21.5 Closed string Virasoro operators	508
21.6 The Polyakov string action	510
Problems	515
22 Interactions and Riemann Surfaces	519
22.1 Introduction	519
22.2 Interactions and observables	520
22.3 String interactions and global world-sheets	524

22.4	World-sheets as Riemann surfaces	527
22.5	Schwarz-Christoffel map and three-string interaction	531
22.6	Moduli spaces of Riemann surfaces	538
22.7	Four open string interaction	547
22.8	Veneziano amplitude	552
	Problems	557
23	Loop Amplitudes in String Theory	561
23.1	Loop diagrams and UV divergences	561
23.2	Annuli and one-loop open strings	563
23.3	Annuli and electrostatic capacitance	567
23.4	Nonplanar open string diagrams	573
23.5	Four closed string interactions	575
23.6	The moduli space of tori	577
	Problems	588
	References	593
	Index	599
