

OFFICIAL SOLUTIONS

I.A.P. Mystery Hunt '87

Supplementary Clues

Noon, Sunday

As of Sunday morning, the coin had not yet been found.

These statements were told to those who called us yesterday.

1. Correction: V should be one less than what's asked for.
2. Apparently, some mystery hunters tampered with some things in an attempt to mislead or cause difficulties for groups that followed. We found two cases of this and corrected them as best we could. (Note that not many clues are vulnerable to tampering.)
3. Interpreting the phrase "the logical place" is one of the trickiest parts of the hunt.
(That's probably an understatement!)

Some hopefully helpful hints:

- Deciduous trees lose their leaves in the fall. *Just a red herring...*
- The Compton Penthouse is not in Building 10. *Some people thought it was 10-250. Wrong - that's "Huntington Hall."*
- When you enter via a revolving door, you will be directed to the "logical" place. *Look at the directory just inside.*
- The basement of the George Eastman Research Laboratory may be interesting, in a way, to EECS majors. *Room numbers there = EECS course numbers (Analogously, 18-511 = 18.511 Logic course)*
- Remember the Alamo! *Some people apparently think it's in Boston...*
- The "logical" place also sounds like it has "no bell."
- X is a six digit number.

(NOTE: None of the above hints are absolutely essential in finding the coin).

18-511 is the office of Nobel laureate Har Gobind Khorana. Nobel sounds like "no bell"... (Get it?)

- The coin was found at approximately 2:15 PM, Sunday. It was in a freezer in Building 66.
