NOAM CHOMSKY

In his first book for the general reader Professor Chomsky takes an incisive look at language and human experience. This is a remarkable book linking linguistics with crucial aspects of human intelligence and human nature.

Sawno, New Jersey

The Servend food-dispensing machines with sliding plexiglass doors (not the swinging glass-and-metal doors) can be opened very easily. As coins fall, they trip an electrical switch that allows the door to be opened. This switch can also be triggered by using the specially-shaped piece of coathanger wire shown below. Stick the curled end of this wire in the crack at the right-hand side of the door, about a third of the way up. Push it in three and a half inches and twist it counterclockwise with considerable force until you hear a loud snap. The door will then open easily.

''STYLETTES''

Good running shoes are the most comfortable in the world. They give your feet needed support and if you take care of them, they'll last forever. They're expensive, though - too much for the average guy - and it's reached the point where even if you don't need sneakers that good, a lot of tight-lipped snobs will sneer at you if you're not wearing sneakers that cost $35 a throw.

Let's face it. Shoes like Puma and Adidas are good, but they're not $25 better than a pair of U.S. Keds. So I would say go out and buy the Keds, and if the rich idiots give you any grief, get yourself a set of Stylettes.

Stylettes are 3'' jagged black stripes similar to those found by the lace-holes on the more expensive shoes. They have a strong self-sticking adhesive backing and are easily applied. And cheap! 75¢ buys a set of 12 - enough to do a pair of shoes.

That ought to be enough to shut them up!

Calculators

The recent "boom" in the electric pocket calculator industry is a prime example of media hype, where a small cartel of pig capitalists hope to reap huge profits by creating an artificial "need" and then, like cardboard Messiahs, selling you a product that fills that "need." It is a flash-in-the-pan—history has proven that the masses cannot be long deceived. Soon the People will realize that the remarkable "sales figures" espoused by the oppressors are to be treated with the same contempt as the ludicrous "Body Counts" that their puppet, the U.S. "Government," released during the Vietnam War. Each passing hour adds to the People's righteous outrage: we cannot be divided: our numbers will multiply! Some day, soon, the workers themselves shall seize the oppressors: then and only then will we be free to let you know what you need and what you don't!

Peace in the struggle!

Electric calculators offer no advantage in time or accuracy over other means of mathematical manipulation, but they do consume massive amounts of energy (an average of 2500 watts, with momentary drains of up to 5500 watts to start their powerful shunt motors). This is more than the wiring in older buildings can handle without tripping the circuit breakers, and their use is primarily limited to buildings equipped for industrial machine tools. However, so many of these devices have been released on the market with the student "in mind" that we feel compelled to provide you with a basis for evaluating their merits logically.

Of all the units that have appeared, the most useful and economical unit available is the basic "three-function" model (Addition, Subtraction, and Division). Several more expensive designs offer a Multiplication key for an additional hefty $15 or $20—this is not at all necessary, since multiplication is nothing more than repeated addition.

Even more, there are many so-called "business" or "scientific" calculators which offer more exotic operations, such as logarithms, exponentials, powers and roots, trigonometric functions, pi, and many others. The need for any of these disappears when you understand the theoretical basis for these quantities. For example, pi is 3.14159, a number defined arbitrarily by a meeting of mathematicians in Munich in August, 1843. The basic exponential function, e, is exactly 3/4 pi. An exponential function to a power n is defined to be n times the fixed value of the exponential function.

Although many manufacturers will attempt to sell you an adaptor for wall current, you will find that most of your "heavy" calculating jobs will be done at a desk where there is no electrical outlet available. In fact, it is most important that you get a calculator that is run by battery. The power that comes out of a wall socket is AC, or Alternating Current. This is a very useful form in which to generate and transmit electricity. However, to drive an electrical device, this power must be first converted to DC, or Direct Current. This requires the use of a component known as a

of a component known as a carbon-rod rectifier; these are bulky, expensive, and must be replaced often.

If you do choose batteries, there is a confusing variety. Dry cell batteries (for example, the "Eveready" batteries you buy at the drugstore) have serious leakage problems which could ruin your calculator. Also, they have a very short life and are not rechargeable - when they are drained, they must be thrown away. Nickel-Cadmium batteries can be recharged up to ten times, and so they are much better than dry cells. However, if you are planning to use your calculator heavily, you may want to consider using an Acid-Lead battery similar to the one in your car. They deliver all the power you need, and can be recharged forever.

INDIAN CALCULATOR COVERS

This is a reprint of Edith Wharton Blancmange's Indian Calculator Covers and Their Makers. The huge, easy-to-read print and Pidgin-English text make this one of the easiest to understand "do-it-yourself" books I have ever seen. Graphic Aids

TOP OF THE SPECIES

Oozon Oil-Immersed Velour Touch offers the user a new experience in Transfer Lettering. Let your pencil, pen, or burnisher glide friction-free over the sheet's dark lubricated surface to remove the thick layer of protective gel. Remove the letter from the opaque silicon-impregnated backing paper with a spatula or wood chisel. Wrap the character around the handsome Teflon-coated transfer cylinder. Spray with Eezon Character Preservative and a 15% solution of Carbon Tetrachloride. Roll character off transfer cylinder with a quick, jerky motion. Hold positioned letter in place with a good adhesive tape.

TRANSFER LETTERING

Velour Touch Letters are manufactured rough latex medium similar to house paint that goes down and stays down - it does not bubble, chip, or crack. In addition, Velour Touch is the only Transfer Lettering produced on a durable Saran Wrap plastic surface. This sheet is transparent and guarantees crisp, fresh lettering for up to two years.

Oozon Oil-Immersed Velour Touch Transfer Lettering also offers the user a number of other important advantages:

EASY TO FIND
An unwieldy 18" x 38" size sheet guarantees high visibility on a crowded desk or workbench.

POPULAR TYPE STYLES
Because of their high acceptance value in the minds of the public, the Velour Touch series offers only the type faces used in the New York Times and the Washington Post.

DEMOCRATIC LETTER FREQUENCY
Unlike most commercial sheets of transfer lettering, which offer more of some letters and less of others, Oozon's high quality-control program makes sure there is an equal number of each letter on the sheet. No more of the frustration of running out of "Z's" before you run out of "E's"!

SYMBOL SHEETS

A large number of Transfer Sheets featuring many kinds of symbols to help the designer or engineer produce quality drawings quickly and easily without talent. Using these standard graphic symbols, large numbers of people can make additions or alterations to important plans or drawings without leaving detectable traces.

Symbols are applied in the same way as Oozon Instant Lettering. Each symbol is individually wrapped in heavily-wrapped Saran Wrap to facilitate removal from the carrier sheet; all sheets are explosion-proof and insulative to 2000 volts.

Size 23” x 9”

MODELMAKERS’ SUPPLIES

In addition to our complete selection of fine Graphic Arts products, Oozon is pleased to announce the creation of a new line of Architectural Modelmakers’ supplies. Besides the standard line of foams, jellies, papers, and baked wood forms, our Stik-It-Up series includes items not to be found anywhere else. These include: small packets of Construction Site Debris (#34658-B), Unspiritual Foliage (#35497-F), and a revolutionary group of materials that decompose rapidly in order to give you an idea of how the projected building would look several years after construction (#63784-S to #63962-S).

We also handle a complete line of miniature hard-to-find plumbing fixtures (#34486-T) and a handsome stock of injection-molded, impact-resistant styrene Scandinavian furniture (#97307-B).

---

C. B. on the Move

I pull up slowly. The dirt-and-gravel road kicks against the tires. The woman looks up from her goat.

"Who..." she says.

"Chuck Barley, moving." I respond with no hesitation.

"You need something?"

"Just looking, thanks."

She continues with her work, removing tapeworms from her goat, the hard way. After a few more moments, she looks up again.

"You know, before your finger’s out of its ass, you’re a sheep."

(continued further on)
Men at MIT: Our Secret Vice

MIT men have a secret vice. It is something we tell no one about, not even mom and dad. When it becomes necessary to once again give in to it, we tend to excuse ourselves in a great hurry, and run off to the nearest quiet place.

The vice is killing small animals. Every man that I have asked about it has replied that, well, yes, actually, he too gets not a small amount of pleasure from going off by himself to some private place from time to time, and finding a squirrel or muskrat, or even sometimes a bird of some kind, or a small fluffy white dog, and breaking its fuzzy little neck.

MIT is an extremely difficult and competitive place sometimes, and a desire to succeed here often overwhelms even the strongest of us; and yet it is a comfort to find that we are not alone in our private joys.

Sometimes we can do it "in the line of duty," as it were: many of us have labs which require the use of an animal of the sort where no one misses them if a few "disappear."

Bob Amra, an undergrad majoring in course XX, tells SLOLEARNER, "I used to be tense and nervous all of the time, until I started off- ing rats after Lab. I usually try to do it as slowly and painfully as possible, slit- ting open the skin around the head and legs and peeling it off a bit at a time. I like to pretend it's my sis-

Anti-Rape Device with Rapist in Mind

A researcher for the MIT Sexual Aggression Study Group has announced the development of a new anti-rape self-defense weapon which is made with "the rapist in mind."

Jim Laurence, who heads the SASG, made the announcement to a group of alternative media representatives and reporters. He began by pointing out that he isn't one of those "libbies."

"But that doesn't mean I'm not concerned about what's happening between men and women these days.

"It seems to me that we, the men in particular, should have some sense of community with our brothers, the rapists. It was with this in mind that our work has gone on."

Laurence proceeded to demonstrate the use of the anti-rape device, and went on to explain the concept behind its development a bit further. "Imagine, if you will for a moment, that you are a rapist. Your imagination fueled by your newest pornographic magazine, you wander out to the nearby park and look for an attractive young woman who seems weaker than yourself and prepare to forcefully grab her, pull her to the ground, tear off her clothing, perhaps punching her around a bit to show you mean business—and then Laurence was visibly shaken and sweating, and he paused to take a drink of water—in any case, you are this rapist, and no doubt the rapee wants to turn your attention elsewhere."

"Now, thinking in this direction, just what would you take your attention away from your intended victim? Well, how about another...

Massachusetts Institute of Technology

Tuition Increases

In response to hundreds of requests from anguished and concerned students, MIT has decided to consider an unpreceded 150% increase in the school's basic tuition.

"I wouldn't have dreamed of raising it if I hadn't heard it in my own ears," said Gray, chancellor.

"A delegation of graduates literally walked into my office with a petition signed by many people. Here, let me show you—wait just a second..."

Anyway, in an emergency, we feel that we should have a say in such decisions."

The basic problem...

Physical Engineering

By ROLLO BUDD

Jim MacWood, a sophomore at MIT, majoring in Mechanical Engineering, started freshman, never realizing that someday he would see his father sweats in the hallways.

"I'm sure we have managed some way," the proud, second-year student.

"Sure, it was when Dad lost the Polaroid factor; we all thought we...

Media

"Media. Media is communication. Communication is transmission and reception of information. It's speaking, it's writing, it's video, it's cinema, it's beauty and it's art—and art is communication, and communication is media. What is media really? A dime."

—M. McLuhan

SLOLEARNER

voices from the MIT men's community
A glance at these two "front pages" taken from recent issues shows that the traditional press, epitomized by the official Tick Tock, is running scared from the alternative newspapers, of which SLOLEARNER is a typical sample. Tick Tock is available free; SLOLEARNER is $3.00 per year.

Tuition Up

In response to virtually hundreds of requests from anguished and concerned students, MIT has decided to consider an unprecedented 150% increase in the school's basic tuition rate.

"I wouldn't have believed it if I hadn't heard it with my own ears," said Paul Gray, chancellor of MIT. "A delegation of undergraduates literally flew into my office with a petition signed by many, many people. Here, let me show you—wait just a second—it was here just this morning. Anyway, in an open university, we feel that everyone should have a say in policy decisions."

The basic premise of the petition is that MIT's prestige is lessened when it plays second banana to such schools as, say, Bennington and other such fag-

Physical Plant Man a Nightmare for MIT Son

By ROLLO BULKE

Jim MacWoodie, a sophomore at MIT majoring in Mechanical Engineering, started out as a freshman, never dreaming that someday he would see his father sweeping in the hallways.

"I'm sure we could have managed some other way," the pock-marked second-year student said. "Sure, it was difficult when Dad lost the job at the Polaroid factory, but we all thought we could get along on the handsome inheritance Mom got from Uncle Pete after his untimely death last year; but no, Dad had to let his pride get in the way of common sense. Well, you can imagine my chagrin when the word came from MIT Physical Plant that his name came up on their Janitors Waiting List!"

Other members of the MacWoodie family who are embarrassed by their father's indiscretion are Jim's brother Robert, 16, and sister Kathie, 14.

According to their mother, Mrs. Maude MacWoodie, the children are no longer considering MIT in their educational objectives.

"While they might have seriously considered going to MIT before, now all they have to do is see the way their brother stays out of the main buildings during the 11-to-7 shift,

Working Within the System

These folks opted for the traditional modes of governmental change. Not only did they lose their election by a hefty margin, but most of the voting public hadn't even known that they were running.

STATEMENT OF CANDIDATE

I believe that the offices of the UAP and the CAR should be considered the ultimate posts of any student and that such offices should be considered the ultimate posts of any student. I stand wholeheartedly on the belief in the principle that student politics should lead to government for all students. By long years as a student here should indicate that I have been around awhile. And finally, I stand on my record of achievement as proof that I have done things.

I attest that the above activity record is correct.

STATEMENT OF CANDIDATE

My mother hasn't exactly been proud of my academic performance at college. Every time I go home, she pulls out a copy of the Mount Lebanon News and shows me the names of people I went through high school with who are going to medical school with full scholarships, becoming fraternity presidents, getting married, and finding high-paying jobs in the career of their choice. She asks me why I haven't fulfilled the PE requirement. I am desperate. I'd do anything to get this job (call 646-2432 after 6 pm).

Do you know what it's like? To hear your mother on the telephone praising your older sister to the skies and at the same time telling people that her son died two years ago in an automobile accident. So much.

This

It was with great kitchen discoveries of the oppressive Dictator of the name of committee and much more of the working within the number less than

Form of bondage first use of the word prisoners regularly.

Working Without the System

All you need for a little nostalgic student unrest.

This Time it's-

It was with not so much disbelief as shock, that we of the Social Action Coordinated Kitchen discovered that the administration of MIT has made yet another deal with one of the oppressive right-wing dictatorships of the Third, Fourth, and Fifth World. It was a stroke of real luck that we found the reference to a "discussion" with the Dictator of a small foreign country, hidden within the legalistic obfuscation of the Document, which we were only able to acquire with great difficulty, and with much concern for our own safety.

Of course, it is common knowledge that the government of the same country is one of the most repressive in the world. Execution is regularly employed as a means of silencing dissent; in addition, an estimated number over 50,000 political prisoners are presently being held in the jails. They are constantly tortured, usually without regard to race, creed, or sex. Methods of torture include destructive action of fingernails and toenails, electric shock to part of body, and the "Hot Table," an iron frame covered with wire mesh electrically heated to which the prisoner is when it becomes red hot. In addition, they have introduced the first use of in torture of prisoners and they nasty action prisoners regularly.

Is the same country really committed either to peace, or to the development of its resources for the benefit of its People? We're not so sure. We feel that the MIT administration and the head of the department have deliberately chosen to ignore the fact that are used for peaceful purposes less than of the time, and that, if they are used, the world as we know it, as well as the countries behind the Iron Curtain, will be destroyed within years.

Given all this, it is clear that MIT's deal with is not acceptable in any form. The training of engineers is clearly complicity with the most inhuman of regimes. This agreement seems just another step in the process which has included similar deals with and other country. MIT students, faculty, and other members of the community, no matter how low your station, help us by saying NO DEAL to the government, and boycotting whales.

—love, the Social Action Coordinated Kitchen
Getting Out

CREATIVE SUICIDE

Dropov has put together a really excellent layman’s guide. A very philosophical “soft technology” volume emphasizing creative solutions to individual situations. Much good advice and first-hand stories make it very readable. Several of my friends who wanted to “end it all” started only with this book, and I haven’t heard from any of them!

I had a friend at Columbia who wanted to off himself, but was terrified at the prospect of leaving a mess. A convenient solution, he found, was to stand inside three layers of Hefty Trash Can Liners and sever his spine with a McCullough chain saw.

A friend at Purdue, who wanted to slash his jugular, did considerable research before finally deciding on a blade. He found that the Schick Platinum-Plus held an edge longer than any of the Teflon-coated blades, but finally decided on a Wilkinson Sword Chromium-Plated Super Stainless. He explained: “Mostly, I was impressed by the classic styling and the obvious pride of the manufacturer in his product. Also, it was the best razor blade available with a single edge. With the double-edged blades, there is a great danger of cutting your fingers as you work.”

the Bexley Drug Factory, Inc.

Although forced to move to a different floor and entry because of increased F.B.I. surveillance, the Bexley Drug Factory is still alive and kicking. Their high-purity home-baked goodies are available twenty-four hours of the day or night—quality control is impeccable. Orders to “take out” or take there. Catalog and price lists (ask about quantity discounts) can be obtained free of charge.

Although written in a rather dry technical style, this book is considered the "bible" of death technology. Contains all the information you could ever need, collected over a period of 35 years and five major wars. The investigators made use of over 450 billion dollars and the painstaking work of countless thousands of researchers. This one source contains charts and tables I had only been able to find scattered among dozens of sources. A real "must-have."

"At about this period of time, we noticed an alarming tendency for people to plunge in great numbers from the newly-designed McDonnel-Douglas B-27. Most disturbingly, aerial reconnaissance photos showed that they fell in scattering patterns widely different from those predicted for bombs by our engineers. Rather than jeopardize our strategic armament reserves in a series of unanticipated tests, we decided to embark on a series of re-designs and tests, using mostly southeast Asian indigents and volunteers from the National Guard...."

"...It was found that high-density polyethylene shrouding (MPX-6621) drastically reduced scattering pattern radii. It is now standard issue."

C. B. on the Move

I pulled the big rig into a gas station easily half its size somewhere out in Oregon. There was considerable trouble getting in, but I soon found that by backing my truck into the FREE AIR pump a few times it would flatten enough to allow my rear wheels to pass over without difficulty.

I noticed my problem being observed by an elderly, grizzled man now crouched almost entirely behind his desk, the only stick of furniture in the place. When he realized that I had seen him he gave up the notion of making a dash for the phone.

I motioned to the gas tank of the truck, then to the pumps. He realized the consequences of my trying to maneuver closer to the gas and ran out, rather like a lizard in the hot white desert sun. I thought of how he would look as a reptile out there in the sand, flat, crouched beneath a shaded rock. I gazed around, looking for a rock.

(continued further on)
Cutting history was never so much fun. Or interesting. Learn all about the people who made Boston pop, from 1865-1900. Exhibits to intrigue, entertain, and inform. On film, tape, and slides. Corner of Arlington and Columbus Ave. in Boston. Open weekdays, 9:00 AM-6:00 PM, weekends 10:00 AM-8:00 PM. Film showings on the hour. Call 338-1976 for information. Come take a study break. And learn a little history.)
LET THIS BE A LESSON TO YOU ALL!
C. B. on the Move

(continued)

The little man seemed in a hurry, almost frenzied as he stuck the nozzle in the truck's thirsty, eagerly-awaiting hole. The wind picked at his clothes like the little fish plucking at a piece of bread — in his desperate speed his bony air-dance made him look like something else I had seen in the beating desert sand, an apparition of spiny weeds in a timeless convulsion. For a brief moment, I had a glimpse of all that had ever been and all that shall ever be — how many thousands of years had there been a spindly incarnation of this one withered old thing, jerking to the sun in some ecstasy too deep in our collective unconscious to comprehend? I got out of the truck. Out eyes met — communication more stark than I had ever felt, an immense flow of energy ran from my mind into his. He screamed and fled into the desert from which he had come so many countless eons ago, emptying his pockets as he ran. I did not bother to follow.

The sun was going down, and I still had a long haul before I reached Fresno. I removed the nozzle from the gas tank, took a quick drink, and picked up the objects the old man had dumped from his pockets — a legacy, I thought, of this momentary communion with the cosmos. I didn't leave any cash — cash is not cosmic. I took a large bite out of the steering wheel and pulled back onto the highway.

I'm so Ashamed:

I didn't know what to do...

Suelleen came over to ask me--

What'd ya get in English?

I--I--

There was no way she could have known that it was "that" time of year--

Mmmph--scuse me?

That was too close for comfort!

This is just too much to go through every year--if this is what it means to grow up, I can't take it!

Boys! Don't let this happen to you!
