APEX4 – NEW AND IMPROVED

Michael Ruf, Bruker Nano, Inc., e-mail: michael.ruf@bruker.com

Good software builds a narrative, creating a great user experience by telling a story that brings experiments to life. Software design and development has a long and successful tradition at Bruker, and we have always known that a crystallographic system is more than just the best hardware. Bruker's software tells the story of crystallography - with our users as the main characters.

APEX4 is the new and improved iteration of Bruker's software suite for chemical crystallography that was released at the 2021 IUCr meeting. This presentation will describe recently introduced features and improvements and will put special focus on tools for investigating incommensurate structures.
