

An aerial photograph of the University of Illinois campus, featuring various brick buildings, green spaces, and parking lots. The entire image is covered with a semi-transparent orange filter. Centered over the image is the text "ILLINOIS ENGINEERING" in white, with a blue "I" logo to the left.

**I** ILLINOIS ENGINEERING

# Effective, Secure, and Efficient Summative Assessment using a Computer-based Testing Facility

Craig Zilles (Computer Science), [zilles@illinois.edu](mailto:zilles@illinois.edu)

<https://cbtf.engr.illinois.edu>

October 7, 2019

**I** ILLINOIS ENGINEERING

# Outline

- **Motivation**
- **The Computer-Based Testing Facility (CBTF)**
- Operational details (security, testing accommodations, cost, etc.)
- What do exams look like? (the PrairieLearn LMS)
- Asynchronous exams, student behavior, and randomization
- Increased testing frequency and improved learning outcomes

# Background & Motivation

## Illinois is a **large** Engineering school

- 2<sup>nd</sup> largest in the U.S.
- 2,111 bachelor's degrees (in Engineering) graduated in 2016

## Many foundational CS, Engineering classes are large

- ~1000 students/semester in **calculus-based mechanics** (Physics)
- 800 students/semester in **data structures** (Computer Science)
- 500+ students/semester in **introductory statics** (Mechanical Eng.)

# Large classes -> Traditional exams are painful

- Printing and proctoring exams across many rooms
- Student conflicts, illness, testing accommodations
- Grading effort, inconsistency, slow feedback
  - (or heavy reliance on multiple choice)
- Sufficiently painful that most faculty do it very infrequently
  - Which is bad for student learning (testing effect, e.g., Roediger and Karpicke)
- Wanted assessment strategy that scaled **without** sacrificing quality

# Our Solution: Computer-Based Testing Facility

## Consists of two parts:

1. Sophisticated computerized problems
  - Randomized parameters, Auto-graded
  - Numeric, symbolic, code writing, etc.

PrairieLearn LMS

Open source: <https://github.com/PrairieLearn>

Body  $B_1$  is a uniform rigid disk that rotates about the fixed center  $O$  as shown, driven by a pure moment  $\vec{M}$ . Body  $B_2$  is a uniform thin rigid rod that connects pins  $P$  and  $Q$  (with center  $C$ ), and point  $Q$  is constrained to move in a slot. Forces  $\vec{F}_P$  and  $\vec{F}_Q$  are exerted on the rod by pins  $P$  and  $Q$ , respectively, and there is no gravity or friction.

At the current instant we have:

$$\begin{array}{ll} m_1 = 4 \text{ kg} & m_2 = 6 \text{ kg} \\ I_{O,k}^1 = 12 \text{ kg m}^2 & I_{C,k}^2 = 32 \text{ kg m}^2 \\ \vec{\omega}_1 = -3\hat{k} \text{ rad/s} & \vec{\omega}_2 = 0 \text{ rad/s} \end{array}$$

What is  $\vec{a}_P$ ?

$$\vec{a}_P = \text{[ ]} \hat{i} + \text{[ ]} \hat{j} \text{ m/s}^2$$

# Rich set of possible problem components

Programming

## RQ2.5. Java in-browser editor, external grading

The Fibonacci numbers are 1, 1, 2, 3, 5, 8, ..., where each number is the sum of the two preceding ones.

$$F_n = F_{n-1} + F_{n-2}$$

Write a Java function `fib` that takes a number `n` and returns the `n`-th Fibonacci number.

Submission.fn

```
1 static int fib(int n) {  
2     return 0;  
3 }
```

## Differentiate a polynomial function of one variable

Find the derivative of

$$-9x^2 + 9x - 4$$

with respect to  $x$ :

$$\frac{df(x)}{dx} = -18x + 9$$

Grade

Symbolic

## Multiply two matrices

Two matrices  $A$  and  $B$  are given as follows:

matlab

python

```
A = [-0.80 -0.80 -0.10 -0.80 -0.80; 0.00 -0.30 0  
.80 0.20 -1.00; 0.10 0.00 -0.30 -0.50 -0.10; -0.  
60 0.60 0.20 0.40 -0.70; 0.90 0.70 -0.30 -1.00 0  
.50];  
B = [-0.70; -0.10; 0.40; 0.70; 0.30];
```

copy this text

Find the product of these two matrices:

$AB =$  matrix (3 significant figures)

## Part 2: A secure computer lab

Firewalled internet

Full software platform  
(Python, RStudio, etc)

ID card swipe  
to check in

85-seat room  
Open: 12 hours/day  
7 days/week

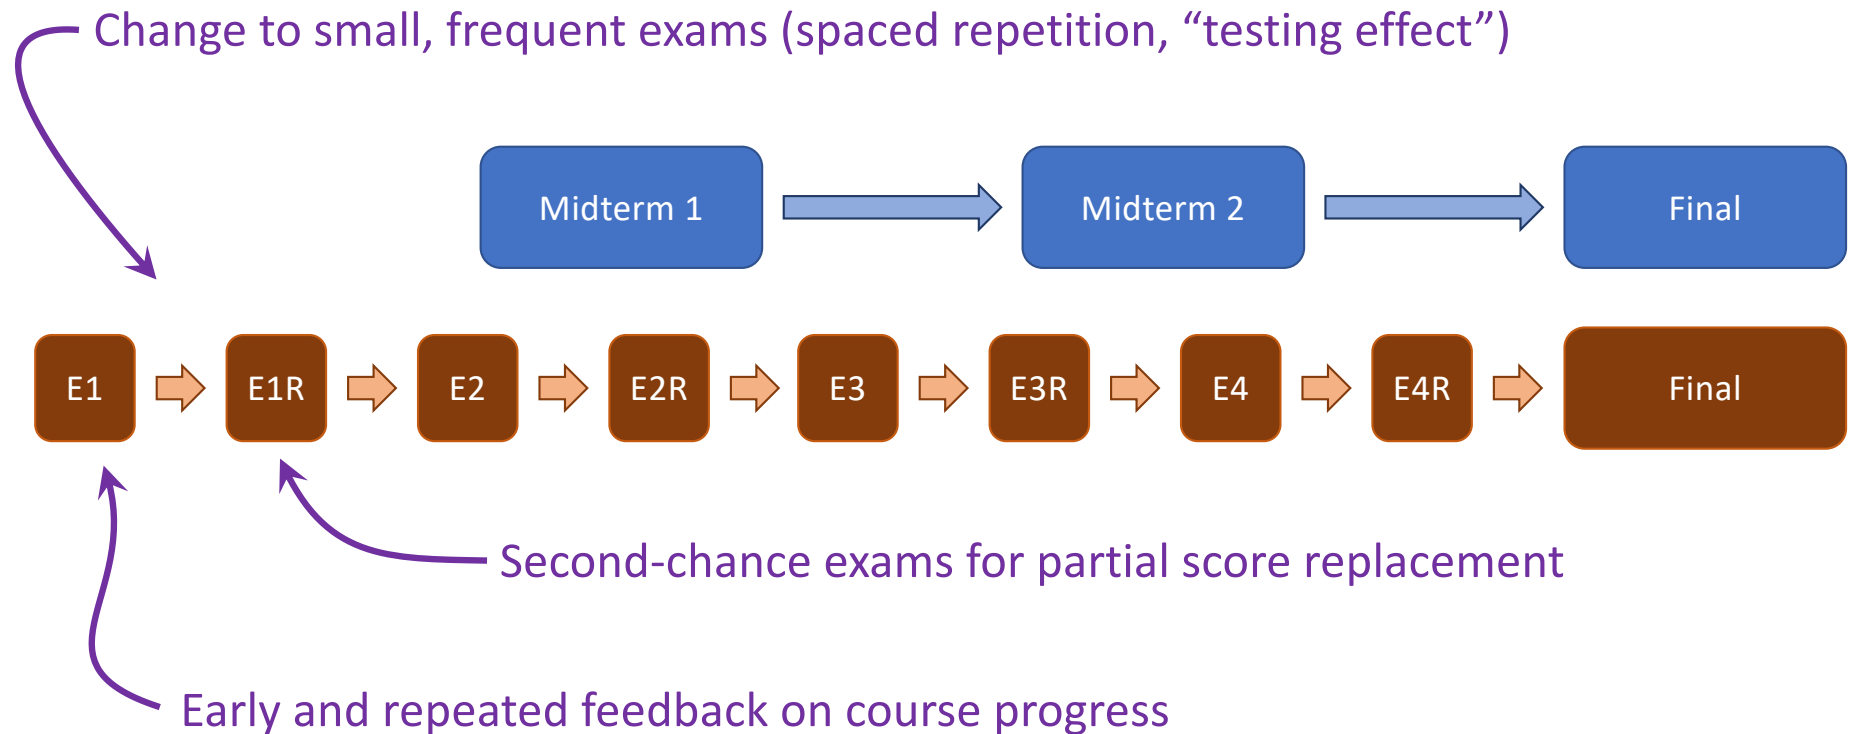

# Entering our 6<sup>th</sup> year this Fall

- Now used by many large Engineering/CS courses (29 courses in Fall 2018)

- Over 50,000 exams/semester and 6,000 unique students (last 5 semesters)

# Changing the way we test

# When assessment is cheaper...

Zilles, et al. EDULEARN 2018

## Faculty Survey

*“This has revolutionized assessment in my course. It is much more systematic, the **question quality is much improved**, and **my TA’s and myself can focus on preparing questions (improving questions)**, rather than grading.”*

# Frees up staff time for higher value activities

- Less (recurring) time spent developing exams, proctoring, grading
- More office hours
- Re-introduction of written lab reports (MechSE) and term projects (Aero)
- Adopt more active learning pedagogies
- Key goal:
  - Automate what can be improved by automation, to free up time for the important things that are best not automated**

# Outline

- Motivation
- The Computer-Based Testing Facility (CBTF)
- **Operational details (+ security, testing accommodations, cost)**
- What do exams look like? (the PrairieLearn LMS)
- Asynchronous exams, student behavior, and randomization
- Increased testing frequency and improved learning outcomes

# Asynchronous exams: Students self-schedule

Each exam runs for 3-4 days, 10am to 10pm

Exam is available

Make a reservation for Sarah Connor (sconnor@college.edu) for CS 313: Exam 7

This is a 50min exam.

Pick an available session from those below:

**Sunday, April 29th**

11:00 am - 11:50 am available	12:00 pm - 12:50 pm available	1:00 pm - 1:50 pm available	2:00 pm - 2:50 pm available	3:00 pm - 3:50 pm available	4:00 pm - 4:50 pm available	5:00 pm - 5:50 pm available	6:00 pm - 6:50 pm full	7:00 pm - 7:50 pm full	8:00 pm - 8:50 pm available	9:00 pm - 9:50 pm full
----------------------------------	----------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	---------------------------	---------------------------	--------------------------------	---------------------------

**Monday, April 30th**

10:00 am - 10:50 am available	11:00 am - 11:50 am available	12:00 pm - 12:50 pm available	1:00 pm - 1:50 pm available	2:00 pm - 2:50 pm available	3:00 pm - 3:50 pm available	4:00 pm - 4:50 pm available	5:00 pm - 5:50 pm available	6:00 pm - 6:50 pm available	7:00 pm - 7:50 pm available	8:00 pm - 8:50 pm available	9:00 pm - 9:50 pm full
----------------------------------	----------------------------------	----------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	---------------------------

**Tuesday, May 1st**

10:00 am - 10:50 am available	11:00 am - 11:50 am available	12:00 pm - 12:50 pm available	1:00 pm - 1:50 pm available	2:00 pm - 2:50 pm available	3:00 pm - 3:50 pm available	4:00 pm - 4:50 pm available	5:00 pm - 5:50 pm available	6:00 pm - 6:50 pm available	7:00 pm - 7:50 pm full	8:00 pm - 8:50 pm available	9:00 pm - 9:50 pm full
----------------------------------	----------------------------------	----------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	--------------------------------	---------------------------	--------------------------------	---------------------------

You can add or cancel a reservation up until 10 minutes **after** that session starts, pending availability. Adding or starting a session late does not change the end time.

Unlimited rescheduling allowed before the scheduled timeslot

# Proctored Exam Experience (1)

1. Students sent a reminder email the morning of their exam
  2. 10 min. before exam: photo ID's checked/scanned; seat assigned
- Items (except pencil) on racks by entrance

## Proctored Exam Experience (2)

1. Students sent a reminder email the morning of their exam
2. 10 min. before exam: photo ID's checked/scanned; seat assigned
3. Students store their belongings (except pencil) on racks by entrance
4. Students pick up scratch paper
5. Student logs into computer, navigates to exam, waits for go signal
6. (Unique) exam generated for student
7. Students answer questions; graded interactively
8. Many exams allow additional attempts (if wrong) for partial credit
9. Proctors enforce time limits; students leave knowing their score

# Security is paramount for the CBTF

Zilles, et al. FIE 2018

- Starts with physical security; CBTF is locked when not in use
  - Continually proctored by 2 proctors
- Proctors verify student identity using IDs, photos
- Seating randomized; avoids seating same exam students together
- Networking restricted; fresh local home directory

## **Biggest source of integrity violations: cell phones & scratch paper**

- Hard (legal) boundary between storage and exam parts of the room
- Constantly changing color of scratch paper
- Proctors + students can report cheating; security cameras document

# Handling Testing Accommodations

- CBTF handles upwards of 98% of students with accommodations
  - without additional effort from faculty/course staff
  - Students prefer CBTF to our DRES center (more convenient, better hours)
- Most common:
  - Extra time
  - “Reduced distraction environment”
  - Wheel-chair accessible
- Automatically handled in scheduler
  - Students bring letter each semester
  - Student’s record tagged by proctor

# Communicate with faculty, Goldilocks-style

- Faculty don't want to know about issues that CBTF can resolve itself
  - Students missing exams (unless recurring problem)
  - CBTF outages
- Faculty need corroboration from CBTF to handle student complaints
  - Students need to raise the issue before they leave the CBTF
  - Proctor produces an incident report, sent to faculty member
  - Leaving CBTF w/o an incident report is waiving your right to complain

## Cost (more details in FIE 2018 paper)

- Biggest expense is staffing (proctors & coordinator)
- Cost per exam < \$2. (\$190k/year / 100k exams/year)
  - Includes scheduling, proctoring, paper, and grading
- Same order of magnitude as printing multi-page paper exams
- An order of magnitude cheaper than online “proctoring” services

# Outline

- Motivation
- The Computer-Based Testing Facility (CBTF)
- Operational details (+ security, testing accommodations, cost)
- **What do exams look like? (the PrairieLearn LMS)**
- Asynchronous exams, student behavior, and randomization
- Increased testing frequency and improved learning outcomes

#### Q4: Rigid Body Kinematics

Total points: 0/70

0%

Assessment is **open** and you can answer questions.

Available credit: 100% (Instructor override) ?

For this quiz you can use the [Dynamics reference pages](#).

Question	Best submission ?	Available points ?	Awarded points ?
<a href="#">Question 1</a>	unanswered	10, 9, 7, 5, 2, 1 ?	0 /10
<a href="#">Question 2</a>	unanswered	10, 9, 7, 5, 2, 1 ?	0 /10
<a href="#">Question 3</a>	unanswered	10, 9, 7, 5, 2, 1 ?	0 /10
<a href="#">Question 4</a>	unanswered	10, 9, 7, 5, 2, 1 ?	0 /10
<a href="#">Question 5</a>	unanswered	10, 9, 7, 5, 2, 1 ?	0 /10
<a href="#">Question 6</a>	unanswered	10, 5, 3 ?	0 /10
<a href="#">Question 7</a>	unanswered	10, 9, 7, 5, 2, 1 ?	0 /10

No saved answers to grade

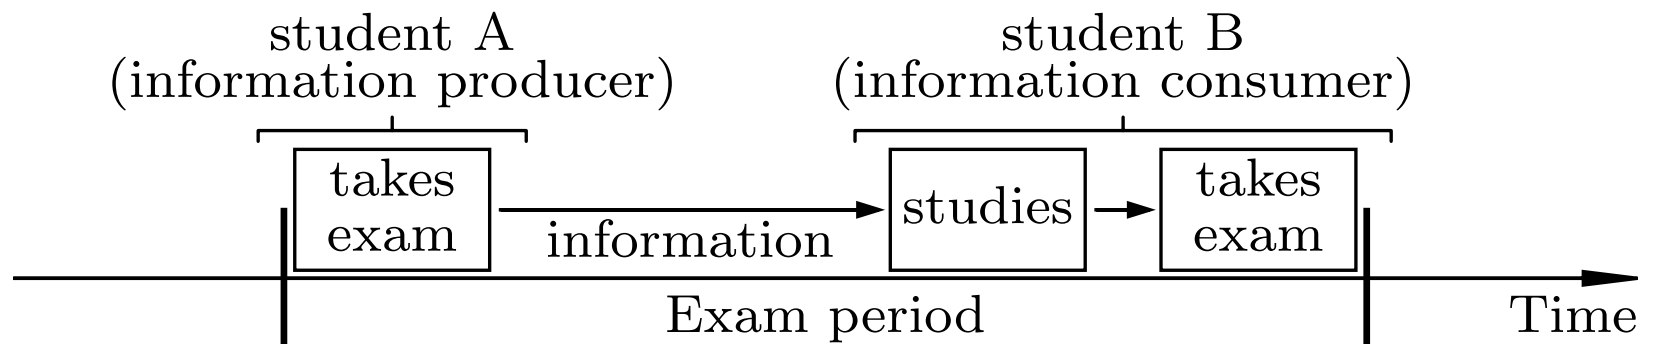

- Submit your answer to each question with the **Save & Grade** or **Save only** buttons on the question page.
- Look at **Best submission** to confirm that each question has been graded. Questions with **Available points** can be attempted again for more points. Attempting questions again will never reduce the points you already have.
- When you are done, please logout and close your browser; there is no need to do anything else. If you have any saved answers when you leave, they will be automatically graded before your final score is computed.

# Outline

- Motivation
- The Computer-Based Testing Facility (CBTF)
- Operational details (+ security, testing accommodations, cost)
- What do exams look like? (the PrairieLearn LMS)
- **Asynchronous exams, student behavior, and randomization**
- Increased testing frequency and improved learning outcomes

# Asynchronous Exams

- Subject to *collaborative “cheating”*

- Key solution: Exam Randomization

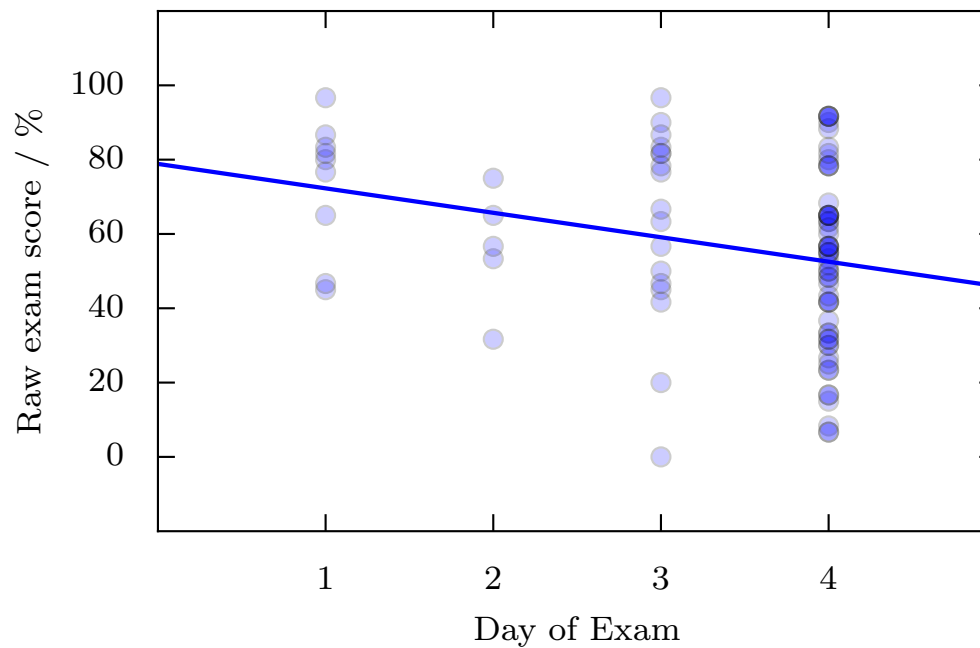

# How do students behave?

- When do students choose to take the exam?
- Does performance vary over time? If so, how?

# Example exam (clearly demonstrates trends)

Chen, West, Zilles, Learning@Scale 2017

Students prefer slots on the last day

Students' scores drop over time

$$\beta = -6.6 \text{ percentage points per day}$$

# Meta-analysis: Forest plot

**Students' performance decreases over exam period in general,  $\beta = -0.4$  ( $p < 0.0001$ )**

# How much randomness is necessary in exams?

Chen, West, Zilles, Learning@Scale 2018

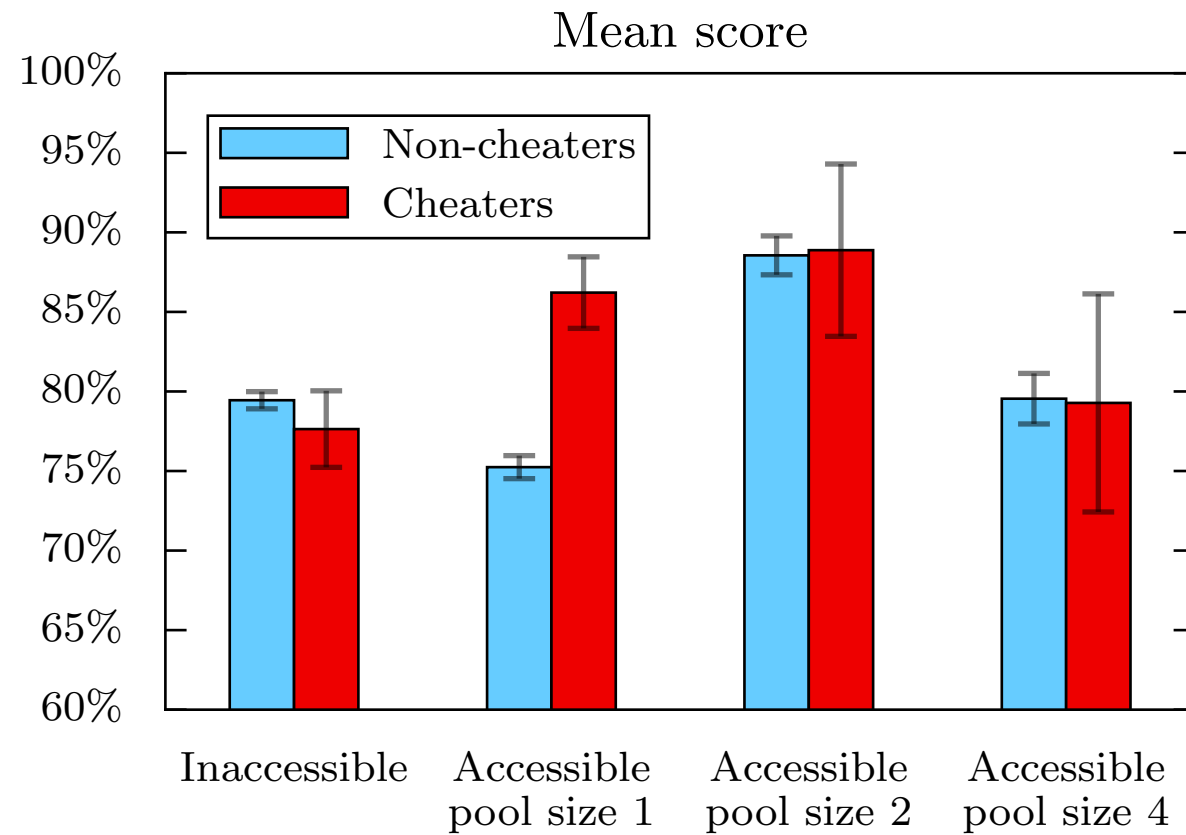

# “Cheater” Identification

- Look at distribution of homework attempts during the student's potential cheating period

# Mean score diffs: cheaters vs. non-cheaters

# Outline

- Motivation
- The Computer-Based Testing Facility (CBTF)
- Operational details (+ security, testing accommodations, cost)
- What do exams look like? (the PrairieLearn LMS)
- Asynchronous exams, student behavior, and randomization
- **Increased testing frequency and improved learning outcomes**

# Frequent Testing

## Faculty Survey

*“The CBTF has allowed us to move from a standard 3-midterm model to a weekly quiz model. **As a result, students are staying on top of the material**, which has made a substantial impact to their learning, but also feeds back into the lecture and lab components of our course. **Students are more participatory in these sections because they have not fallen behind.**”*

# Improved learning from frequent testing

- Two pseudo-experimental studies:
  - Same class, same instructor, different semesters
  - Only change is shifting assessment activities to the CBTF
    - Enabling more frequent, reliable assessment
- Comparing scores on unchanged pencil & paper final exam
  - Better estimate of student knowledge than overall course grade

# TAM 251: “Introductory Solid Mechanics”

Morphew, et al. In submission

- Replaced 2 mid-terms with 5 quizzes (+ 5 second chances)

Significant reduction in failing grades, increases in A grades

# CS 421: Programming Languages

Nip, et al. SIGCSE 2018

- Converted 2 mid-terms to CBTF
- 4 (of 11) machine problems submitted by re-writing random 1/5 at CBTF

Fall 2014 mean (sd)	Fall 2015 mean (sd)	t-test	Effect size
72.5% (18.6%)	76.8% (15.6%)	p = 0.046	d = 0.25

Significant reduction in failing grades

# Second-chance Testing

- Understanding expectations/preparation is hard
- Run exams twice; (partial) grade replacement
  - Improves mean score,
  - tightens the distribution

# Summary

- The CBTF is a fixture of our College of Engineering
  - Making testing more efficient and more effective for learning
  - Mature operationally, secure, and running at production scale
- Well liked by faculty (hence its rapid adoption)
  - Does involve a per-course upfront investment in digitizing content
- We're happy to share our experiences and help you adopt a CBTF!
  - Looking for faculty willing to be first adopters on your campus
