5.32 is a 15-unit (1-12-2) course. Therefore, if you do your homework and properly coordinate your laboratory activities with your lab partners, you will need to devote, on average, only three afternoons (of your choice) a week to 5.32.

For the students' convenience, the 5.32 lab is indeed available all five afternoons a week for 2 out of the 3 experimental modules and four afternoons a week (minus Tuesdays, as it stands now) for the remaining, Diels-Alder one. While you should not take other classes during the three afternoons you have chosen to devote to 5.32, you certainly may during the other two.
