Academic offerings

Other offerings
Electronic Applications

Campus Management focuses on fully integrated electronic applications processed via the web:

The aim to offer electronic applications is...

- ...to cover the most typical university communication process = application for a service:
  - e.g. application for admission, for module booking, for parking lot certificate, registration to examination....

- ...to communicate with prospects, applicants, students, alumnis...

- ...to allow the customers to define own internet applications and generate customer specific webpages
Rules & Regulations

Campus Management focuses on electronic rules & regulations:

Rules & regulations in Campus Management offer high flexibility to cover complex process requirements

In Campus Management,....

- rules are not hard-coded, but defined in customizing
- rules allow automated support of decision processes
- the customer retains greatest flexibility in adapting their rules to the necessities of their business (rule engine + user exits)
- administrative processes can be offered as self-service functions to students because rule checking mechanisms ensure the appliance of rules online
Case Study: Online Admission Application

Ron wants to study at e-University and looks after programs of study.

He submits an application for admission via web.

Study information and documents are sent to Ron.

Application status tracking.

Automatic notification of application receipt.

Admission Officer approves application.

Admission Officer receives application in his inbox.

Application approval workflow is started.

Correspondence is triggered to the applicant.

Admission Rules are checked automatically.
Change to live system....
Thank you!
