1. The midterm exam will be given in class on Wednesday, April 12th. It may include questions on any material covered since the start of the term through our April 5th session on estimating population proportions. Your midterm exam grade comprises 20% of your final grade in this course.

2. No make-up exam will be given except in extraordinary (i.e., emergency) circumstances.

3. On April 12th, you should bring to class the following:
   a. Any two statistics textbooks of your choice
   b. Two 8\(\frac{1}{2}\) × 11-inch sheets of paper covered with your notes (the sheets may be covered on both sides if you wish, e.g., for a total of four sides)
   c. A calculator
   d. Pens/pencils/erasers

4. We will provide:
   a. Scratch paper
   b. Any statistical tables needed to complete the exam

5. Note that you may not share any materials with other students during the exam.

6. Questions will be a mix of multiple choice and short answer. Interpretation of findings and the explanation of quantitative reasoning and statistical concepts will be as important to your grade as will setting up and performing computations correctly.

7. No new material will be introduced on the exam—we want to assess your comprehension of what we have covered thus far in the course, not to trick or confuse you. We will be including questions that require you to apply your knowledge of a concept to new issues or problems, as well as questions that test the depth of your understanding (such as those included on some of the session handouts). Finally, we will be asking you to explain in clear, simple language the (sometimes) complex topics we’ve covered. Make sure you understand the ideas behind the equations!

8. As always, we encourage study groups and attendance at recitation to help you succeed in the course. Please let us know if you have any questions or problems; we’ll do our best to help you.
