

How to set the environment variables in JACOBIAN

Patricio Ramirez

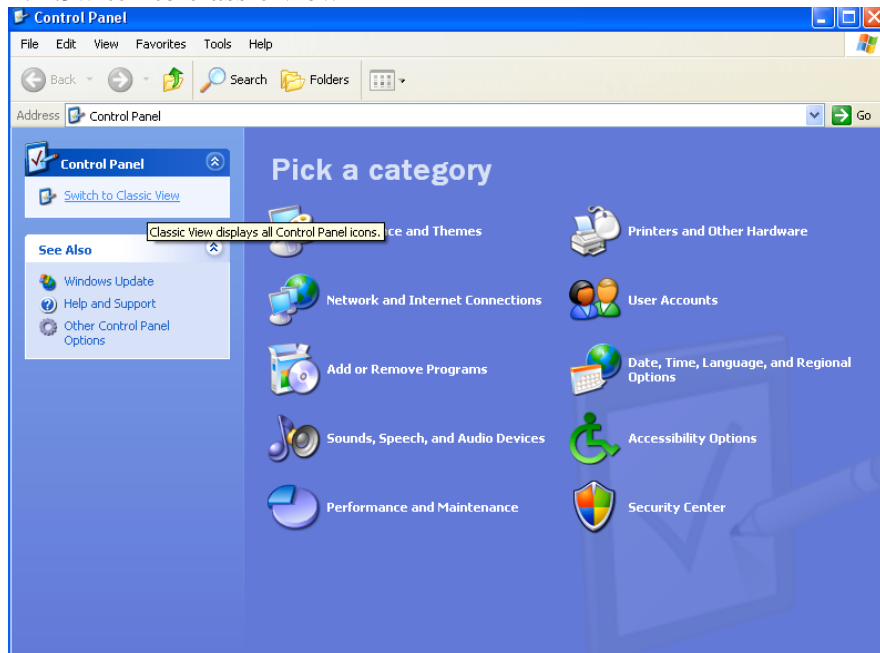

9/17/07

You need to do this to get JACOBIAN running in the PC cluster (66-064).

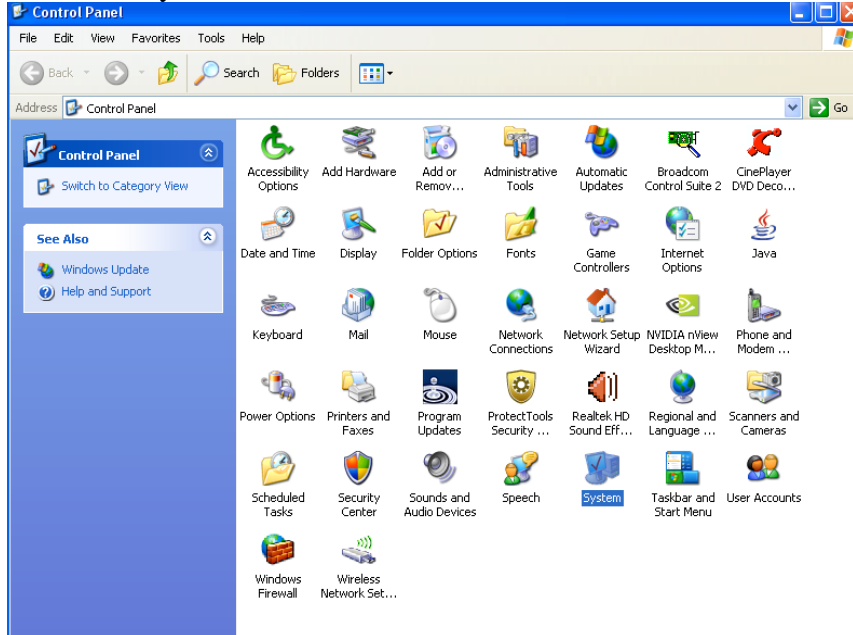

1. Go to the control panel

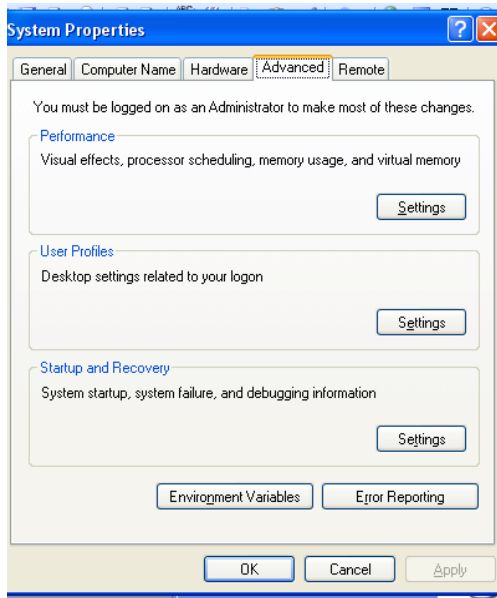

2. Switch to classic view

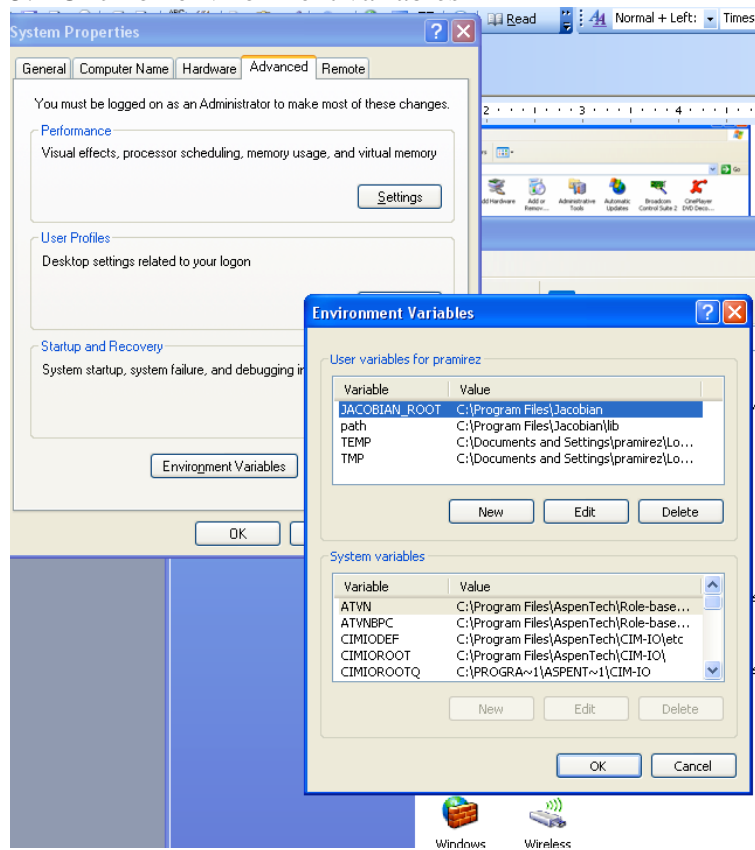

3. Select System

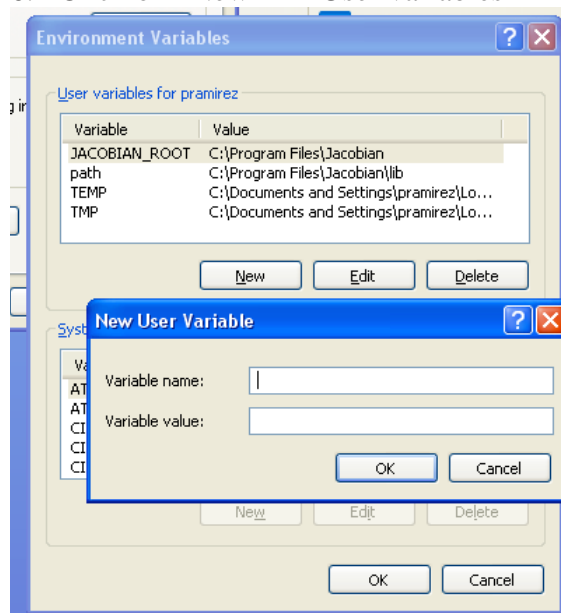

4. Select the “Advanced” tab

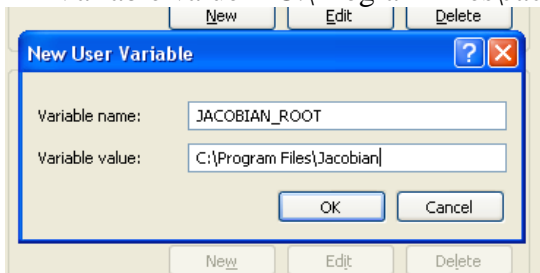

5. Click on environment variables

6. Click on “New” in “User variables”

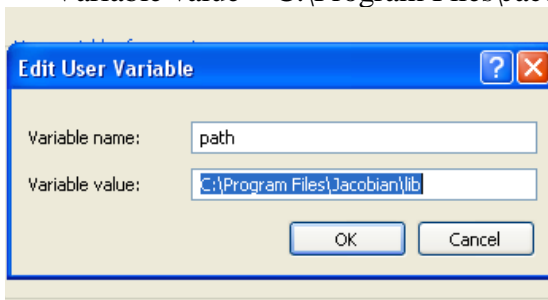

7. Write the following in the dialog box:
 - Variable name = JACOBIAN_ROOT
 - Variable value = C:\Program Files\Jacobian

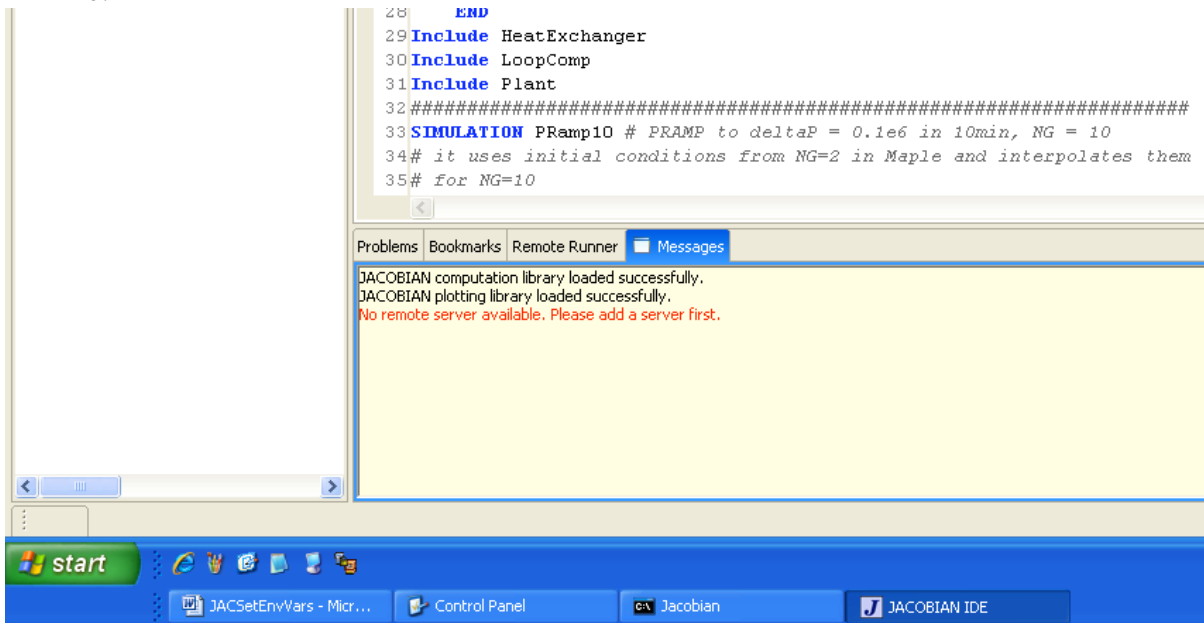

8. Click OK

9. Do the same for the following variable:
 - Variable name = path
 - Variable value = C:\Program Files\Jacobian\lib

10. Click OK

11. End. Now restart JACOBIAN and it should work. You will receive a message like:

It is important that the message says the following:
“JACOBIAN computation library loaded successfully”
“JACOBIAN plotting library loaded successfully”
