

L16: Atomicity

Nickolai Zeldovich
6.033 Spring 2011

Bank account transfer

xfer(bank, a, b, amt):

bank[a] = bank[a] – amt

bank[b] = bank[b] + amt

Bank account transfer

$xfer(bank, a, b, 50)$:

$xfer(bank, a, b, amt)$:

$bank[a] = bank[a] - amt$ $\leftarrow a=100, b=100$

$bank[b] = bank[b] + amt$ $\leftarrow a=50, b=100$

$\leftarrow a=50, b=150$

Bank account transfer

xfer(bank, a, b, amt):

 bank[a] = bank[a] – amt

 bank[b] = bank[b] + amt

audit(bank):

 sum = 0

 for acct in bank:

 sum = sum + bank[acct]

 return sum

Bank account transfer

audit(bank):

xfer(bank, a, b, amt):
bank[a] = bank[a] – amt ← sum=200
bank[b] = bank[b] + amt ← sum=150
 ← sum=200

audit(bank):
sum = 0
for acct in bank:
 sum = sum + bank[acct]
return sum

Eventual goal: transactions all-or-nothing & before-or-after atomicity

xfer(bank, a, b, amt):

begin

bank[a] = bank[a] – amt

bank[b] = bank[b] + amt

commit

audit(bank):

begin

sum = 0

for acct in bank:

sum = sum + bank[acct]

commit

return sum

Account balances stored in file

xfer(bankfile, a, b, amt):

 f = open(bankfile)

 abal = f.read(offset: a)

 bbal = f.read(offset: b)

 f.write(offset: a, abal – amt)

 f.write(offset: b, bbal + amt)

Shadow copy

```
xfer(bankfile, a, b, amt):  
    copy(bankfile, "newfile")  
    f = open("newfile")  
    abal = f.read(offset: a)  
    bbal = f.read(offset: b)  
    f.write(offset: a, abal - amt)  
    f.write(offset: b, bbal + amt)  
    rename("newfile", bankfile)
```

File system data structures

directory data blocks:

filename “bank” → inode 12

filename “newfile” → inode 13

inode 12:

data blocks: 3, 4, 5

refcount: 1

inode 13:

data blocks: 6, 7, 8

refcount: 1

rename(“newfile”, “bank”)

directory data blocks:

filename “bank” → inode 12

filename “newfile” → inode 13

inode 12:

data blocks: 3, 4, 5

refcount: 1

inode 13:

data blocks: 6, 7, 8

refcount: 1

rename(“newfile”, “bank”)

directory data blocks:

filename “bank” → inode 12

filename “newfile” → inode 13

inode 12:

data blocks: 3, 4, 5

refcount: 1

inode 13:

data blocks: 6, 7, 8

refcount: **2**

rename(“newfile”, “bank”)

directory data blocks:

filename “bank” → inode **13**

filename “newfile” → inode 13

inode 12:

data blocks: 3, 4, 5

refcount: 1

inode 13:

data blocks: 6, 7, 8

refcount: 2

rename(“newfile”, “bank”)

directory data blocks:

filename “bank” → inode 13

filename “newfile” → inode 13

inode 12:

data blocks: 3, 4, 5

refcount: **0**

inode 13:

data blocks: 6, 7, 8

refcount: **2**

rename("newfile", "bank")

directory data blocks:

filename "bank" → inode 13

~~filename "newfile" → inode 13~~

inode 12:

data blocks: 3, 4, 5

refcount: 0

inode 13:

data blocks: 6, 7, 8

refcount: 2

rename(“newfile”, “bank”)

directory data blocks:

filename “bank” → inode 13

~~filename “newfile”~~ → ~~inode 13~~

inode 12:

data blocks: 3, 4, 5

refcount: 0

inode 13:

data blocks: 6, 7, 8

refcount: 1

Recovery after crash

```
salvage(disk):
    for inode in disk.inodes:
        inode.refcnt =
            find_all_refs(disk.root_dir, inode)

    if exists("newfile"):
        unlink("newfile")
```
