The FMB300 Filter Module Box is a single channel box that provides housing for any Krohn-Hite filter 3A, 3B and 3C module. Included are input BNC connectors for differential or single-ended inputs, a BNC connector for the output, a power on LED, a DC Offset Adjust for serving any small dc levels at the output and a barrier strip for applying ±5Vdc to ±15Vdc power to the unit. Input sockets are provided for easy installation and removal of any module.

When using the module with a single input, use the +Input BNC. It is recommended to terminate the –Input.

If Option 001 is applied, the AC Power Adapter connector replaces the barrier strip.
