Introduction

The Amoco MC method is defined by:

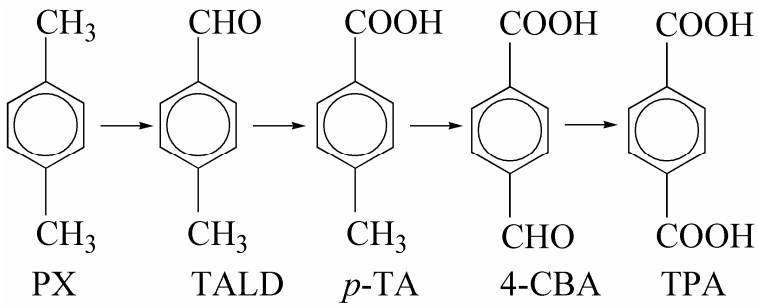
$$Hydrocarbon + O_2 \xrightarrow[solvent]{metals/bromide} oxygenate + H_2O$$

$$Ar - n(CH_3) + O_2 \xrightarrow[HOAC]{\substack{Co(OAC)_2 \\ Mn(OAC)_2 \\ HBr}} Ar - n(COOH) + nH_2O \qquad n = 1\text{-}4$$

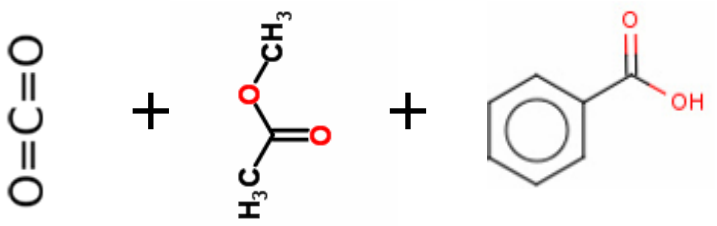
- **High activity**
- **High selectivity**
- **Easy separation**

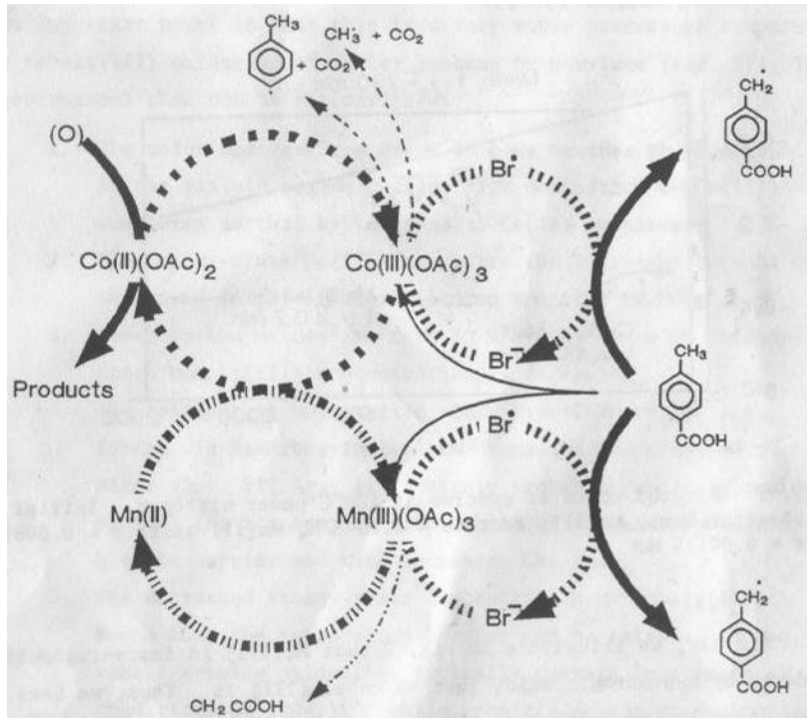
Introduction

Oxidation of PX to TPA



Major by-products (>0.1% yield)





Catalytic cycles for PX oxidation suggested by Partenheimer.

The formation of COx (CO_2 and CO) can be used to estimate side reactions in PX oxidation.

Partenheimer, W. ***Catalysis of Organic Reactions***, (Ed.: D. W. Blackburn): 321-346, Marcel Dekker: New York, 1990.

Mechanism & Kinetic Model

(*i*) Formation of CO_2

$$Ar-COOH+Co^{III}\xrightarrow{k_I}Ar^{\cdot}+CO_2+Co^{II} \quad (1)$$

$$CH_3COOH+ROO^{\cdot}\xrightarrow{k_{II}}ROOH+CH_3COO^{\cdot} \quad (2)$$

$$CH_3COO^{\cdot}\rightarrow CH_3^{\cdot}+CO_2 \quad (3)$$

$$Ar-COOH+ROO^{\cdot}\xrightarrow{k_{III}}ROOH+Ar-COO^{\cdot} \quad (4)$$

$$r_{CO_2}=k_I\cdot[Ar-COOH]\cdot[Co^{III}]+k_{II}\cdot[CH_3COOH]\cdot[ROO^{\cdot}] \quad (5)$$

Kinetic Model of CO_2 Formation:

$$r_{CO_2}=k_1\cdot[Ar-COOH]+k_2\cdot[ROO^{\cdot}] \quad (6)$$

Partenheimer, W. ***Catalysis of Organic Reactions***, (Ed.: D. W. Blackburn): 321-346, Marcel Dekker: New York, 1990.
Kenigsberg, T. P.; Ariko, N. G.; Agabekov, V. ***Energy Convers. Mgmt.,*** 1995, 677-680.

Mechanism & Kinetic Model

(*ii*) Formation of CO

$$Ar-CHO+Co^{III} \xrightarrow{k_{IV}} Ar^{\bullet}+CO+Co^{II} \qquad (7)$$

$$Ar-CO^{\bullet} \xrightarrow{k_{V}} Ar^{\bullet}+CO \qquad (8)$$

$$r_{CO}=k_{IV}\cdot[Ar-CHO]\cdot[Co^{III}]+k_{V}\cdot[Ar-CO^{\bullet}] \qquad (9)$$

Kinetic Model of CO Formation:

$$\boxed{r_{CO}=k_{3}\cdot[Ar-CHO]+k_{4}\cdot[Ar-CO^{\bullet}]} \qquad (10)$$

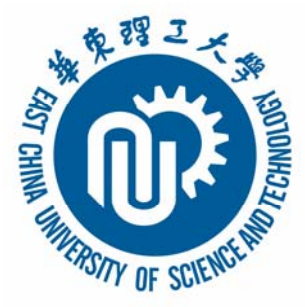
Conclusion

1. The MC oxidation of PX was carried out semi-continuously and the formation kinetics of COx was measured. The simplified elementary steps of COx formation were summarized, on the basis of which the kinetic model of COx formation was established.

2. For the formation of CO_2, the fitting curve is in agreement with the experiments. The rate constants of elementary step for decarboxylation of alkyl aromatics were determined with narrow confidence intervals.

3. There are two peaks for the formation rate of CO as a function of time, in which the first is captured successfully by the model. In initial stage, the CO formation has two main sources, including the decarbonylation of aldehyde group and the direct decarbonylation of carbonyl radical. The rate constants of these two elementary steps were determined.



The End!

Thank you for your attentions!
