

\$SPAD/src/share Makefile

Timothy Daly

December 3, 2016

Abstract

Files in the share directory are common to all of the system builds.

Contents

1 `command.list`

3

1 command.list

The `command.list` file contains command completion strings used by the `clef` command line editor function. In the NAG version this lived in the `share` subdirectory but the open source version moves it back to the `lib` directory where it originally lived.

— **command.list** —

```

${LIB}/command.list: ${IN}/algebra/command.list
@ echo ssh01 making ${LIB}/command.list from ${IN}/algebra/command.list
@ cp ${IN}/algebra/command.list ${LIB}/command.list
```

```

-----
— * —
```

```

IN=${SRC}/share
LIB=${MNT}/${SYS}/lib
```

```

FILES=${LIB}/command.list
```

```

all: announce ${FILES}
@ echo ssh2 finished ${IN}
```

```

announce:
@ echo =====
@ echo src/share BUILDING SHARE FILES
@ echo =====
```

```

clean:
@echo ssh3 cleaning ${SRC}/share
```

```

\getchunk{command.list}
```

```

-----
```
