## LINGUIST 168 Introduction to Linguistic Typology <br> Lecture 7: Phonological typology Segmental inventories Ksenia Ershova <br> April 19, 2021

## Plan for today

- Questions about previous lectures / homework / readings
- Phonological typology
, object of study
, segmental patterns
, syllable structure and rhythm
, tone, pitch, and prosody

## Questions about reading

- Why is there so much disagreement about syllable structure in sign languages?
- How do linguists decide on sound equivalences (esp. vowels) across languages?
- Why are certain sounds or sound combinations more common?
, economy ~ ease of pronunciation
, processing ~ clarity of perceived contrasts
, Gordon, Matthew K. 2016. Phonological typology. OUP. https://searchworks.stanford.edu/view/11716369

## Questions about readings

- Is sociophonetics a thing?
, https://linguistics.stanford.edu/research/sociolinguistics
, Interactional Sociophonetics Lab https://stanford.edu/~podesva/lab.html
- rhotacized vowels: English /ə/ in flower
- fricative vowels: vowel + obstruction, like a fricative consonant
- vowel contrast in length - to be discussed
- pitch accent and tone - to be discussed

## Plan for today

- Questions about previous lectures / homework / readings
- Phonological typology
, object of study
, segmental patterns
, syllable structure and rhythm
, tone, pitch, and prosody

## Typology of phonological systems

- Phonological typology identifies universals, trends and tendencies in the domain of sound and gesture (for sign languages):

1. Which sounds/gestures are possible? Which are common? Universally present? Very rare?
2. Are there constraints on how sounds/gestures can combine?
3. How are sounds/gestures arranged into larger units (syllables or words)?
segmental/ phonemic inventories
phonotactics and syllable structure suprasegmental: pitch accent,
4. What additional phonological properties are relevant? What are the rules governing these properties?

## Phoneme

- smallest contrastive unit of speech
- may be pronounced in different ways depending on context
- versus phone $\longrightarrow$ the specific pronunciation

| word | phonology | phonetics |
| :---: | :---: | :---: |
| stake | /steIk/ | [steIk] |
| take | /terk/ | [ $\mathbf{t}^{\text {h }}$ eIk] |
| bite | /bait/ | [bart'] |
| biter | /baitəג/ | [bairə] |

## What counts as a phoneme?

- depends on researcher
- vowel diphthong [ar]

$$
\begin{aligned}
& =\text { one phoneme /ai/ } \\
& =\text { two phonemes } / \mathrm{a} /+/ \mathrm{I} /
\end{aligned}
$$

- [swo]

$$
\begin{aligned}
& =/ \mathrm{s}^{\mathrm{w}} /+/ \mathrm{e} / \\
& =/ \mathrm{s} /+/ \mathrm{o} /
\end{aligned}
$$

- differences in pronunciation across languages:
$\left.\begin{array}{l}\text { Russian / } t / / \\ \text { English / } / \text { / }\end{array}\right\}$ same or different?

## Phonological typology

- object of study
- segmental patterns:
, consonants
, vowels
- syllable structure and rhythm
- tone, pitch, and prosody

## Generalizations about phoneme inventories

- All languages have both consonants and vowels.
- A minimal inventory consists of 11 sound segments
, Rotokas: 6 consonants and 5 vowels
The largest known inventory consists of more than 100 sounds
, !Xóõ

## Most common consonants

|  | labial |  | dentoalveolar |  | palatal |  | velar |  | glottal |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| plosives | p | b | t | d | t 5 |  | k | g | ? |
| fricatives | f | $\beta$ | s |  | ! |  |  |  | h |
| nasals |  | m |  | n |  | n |  | $\eta$ |  |
| approximant |  | w |  | 1 |  | j |  |  |  |
| trill |  |  |  | r |  |  |  |  |  |
| flap |  |  |  | r |  | $\square$ | 6\% |  |  |

Rotokas: 6 consonants

## Most common consonants

|  | labial |  |  | dento- <br> alveolar |  | palatal | velar |  | glotal |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| plosives | p | b | t | d | t |  | k | g | ? |
| fricatives | f |  | s |  | f |  |  |  | h |
| nasals |  | m |  | n |  | n |  | n |  |
| approximant |  | w |  | l |  | j |  |  |  |
| trill |  |  |  | r |  |  |  |  |  |

## Pirahã: 8 consonants

## Most common consonants

|  | labial |  | dentoalveolar |  | palatal |  | velar |  | glottal |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| plosives | p | b | t | d | t |  | k | g | ? |
| fricatives | f | v | s |  | J |  |  |  | h |
| nasals |  | m |  | n |  | n |  | $\eta$ |  |
| approximant |  | w |  | 1 |  | j |  |  |  |
| trill |  |  |  | r |  |  |  |  |  |

## Samoan: 10 consonants

## Most common consonants ranked

## Common consonants are truly common!

Absence of common consonants

| Value | Representation |
| :--- | :---: |
| All present | 503 |
| No bilabials | 4 |
| No fricatives | 48 |
| No nasals | 10 |
| No bilabials or nasals | 1 |
| No fricatives or nasals | 1 |

Total:
567

## Very large consonant inventories: !Xóõ

http://udel.edu/~dlarsen/ling203/Languages/!Xoo.pdf

Very large consonant inventories: West Circassian plosives

|  |  | bilabial |  | dento- <br> alveolar |  | palatal |  | velar |  | uvular | glottal |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | nasal | m |  | n |  |  |  |  |  |  |  |
|  | regular | b | p | d | t |  |  |  | k | q | $?$ |
|  | ejective |  | p' |  | t' |  |  |  | $k^{\prime}$ |  |  |
|  | labialized |  |  |  | $t^{\text {'w }}$ |  |  |  | $\begin{aligned} & k^{w} \\ & k^{\prime w} \end{aligned}$ | $q^{\text {w }}$ | $?^{w}$ |
|  | regular |  |  | dz | $\begin{aligned} & \mathrm{ts} \\ & \mathrm{t} \int \end{aligned}$ | dz | t6 |  |  |  |  |
|  | ejective |  |  |  | $\begin{aligned} & \text { ts' } \\ & \text { t }{ }^{\prime} \end{aligned}$ |  | t6' |  |  |  |  |
|  | labialized |  |  | $d z^{w}$ | ts ${ }^{\text {w }}$ |  |  |  |  |  |  |

Very large consonant inventories:
West Circassian fricatives and approximants

|  |  | labial | dentoalveolar |  | postalveolar |  | palatal |  | velar |  | uvular |  | pharyngial |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 炭 | regular | f | z | s | 3 | J | 3 | 6 | $\gamma$ | x | y | $X$ | ћ |
|  | labialized |  |  |  |  |  |  |  |  | $\mathrm{x}^{\mathrm{w}}$ | $y^{w}$ | $\mathrm{x}^{\mathrm{w}}$ |  |
|  | laminal |  |  |  |  | $\int_{D_{0} \int_{0} \int_{0}{ }^{\text {w }} \text { d }}$ |  |  |  |  |  |  |  |
|  | lateral |  |  |  | $B$ | t d |  |  |  |  |  |  |  |
|  | approximant | w |  |  |  |  |  |  |  |  |  |  |  |
|  | trill |  |  | $r$ |  |  |  |  |  |  |  |  |  |

## Average consonant inventory

https://wals.info/chapter/1

## Very rare consonants

- clicks

East Africa

- labial-velar plosives two areas:
, $/ \widehat{\mathrm{gb}} \mathrm{kp} /$
- pharyngeals
, /ち
- Dental/alveolar non-sibilant fricatives

, / $\theta$ ð/

## Clicks

Figure 1. Mechanism for making clicks

## Distribution of the rarest consonants

| Value | Representation |  |
| :--- | :--- | ---: |
| None | 449 |  |
| Clicks | 9 |  |
| Labial-velars | 45 |  |
| Pharyngeals | 21 |  |
| 'Th' sounds | 40 |  |
| Clicks, pharyngeals, and 'th' | 1 |  |
| Pharyngeals and 'th' | 2 |  |
|  | Total: | 567 |

## Generalizations about plosives and fricatives

- All languages have plosives, but not all languages have fricatives.

$$
\text { /ptk| /f暑 } /
$$

- Voiceless obstruents are more common than voiced ones:
, All languages have voiceless plosives.
, Most languages that have voiced fricatives, also have voiceless fricatives in the same place of articulation.

## \% of languages where the voiced member of the voiced/ voiceless is missing

close to an absolute universal for / $\mathrm{C} \mathbf{z} \mathbf{3}$ /

Gordon, Matthew (2016) Phonological typology. OUP.

## Other generalizations about consonants

- Most languages have nasal consonants.
- Larger inventories may include consonants that are inherently more complex:
, clicks
, lateral fricatives
, glottalized consonants
Smaller inventories generally do not have these.
