TV TIP #4: Brightness Control. The brightness control controls the brightness of the picture. To make the picture brighter, turn it clockwise. To make the picture more dim, turn it counterclockwise. On digitally-controlled sets, use the "+" button to increase brightness; use "-" to decrease brightness. Sometimes brightness is called "picture."

TV TIPS are provided as a service by the TV36 Engineering Department.

If you'd like to join MIT Student Cable Television, or if you have any questions about our TV36 programming, please call us at 253–TV36.
