Identification

Local Configuration Specification
J. H. Saltzer

Discussion

The following sections document the particular configuration
of the M.I.T. Project MAC Multics installation. A similar
(but not necessarily identical) set of configuration
specifications applies to any Multics installation. This
section is provided for three reasons:

  a. To illustrate, for completeness, a typical
      Multics configuration;

  b. To provide an example from which to work
      incrementally in developing a Multics
      configuration at another site;

  c. To be a reference for questions about the
      M.I.T. configuration in particular.
