

Coping with Complexity

SOSP 17

December 14, 1999

Speaker: Jerry Saltzer

Saltzer@mit.edu

<http://mit.edu/Saltzer>

Saltzer, 12/29/99, slide 1

Coping with Complexity

- Sources
- Learning from disaster (and experience)
- Fighting back
- Admonition

Saltzer, 12/29/99, slide 2

Too many objectives

Not enough principles

Saltzer, 12/29/99, slide 3

Many objectives

+

Few principles

+

High $d(\text{technology})/dt$

=

Very high risk

Saltzer, 12/29/99, slide 4

No Hard-edged barrier—

it just gets worse...

Saltzer, 12/29/99, slide 5

Learn from failure

(photo)

Pyramid at Meidum

(photo)

Bent Pyramid

Saltzer, 12/29/99, slide 6

Learn from failure

*Complex systems fail for
complex reasons*

- Find the cause
- Find a second cause
- Keep looking
- Find the mind-set

(see Petroski, *Design Paradigms*)

Saltzer, 12/29/99, slide 7

NYC control of 10,000 traffic lights

Univac, based on experience in Baltimore and Toronto

started: late 1960's
scrapped: 2-3 years later
spent: ?

- second-system effect:
 - new radio control system
 - new software
 - new algorithms
- based on systems 100X smaller, incommensurate scaling

Saltzer, 12/29/99, slide 8

California Department of Motor Vehicles

Vehicle Registration,
Driver's License

started: 1987
scrapped: 1994
spent: \$44M

- underestimated cost by factor of 3
- slower than 1965 system
- governor fired the whistleblower
- DMV blames Tandem
- Tandem blames DMV

Saltzer, 12/29/99, slide 9

United Airlines/Univac

automated reservations,
ticketing, flight
scheduling, fuel delivery,
kitchens, and general
administration

started: late 1960's
scrapped: early 1970's
spent: \$50M

- second system: tried to automate everything, including the kitchen sink

(ditto: Burroughs/TWA)

Saltzer, 12/29/99, slide 10

CONFIRM

Hilton, Marriott, Budget,
American Airlines

Hotel reservations with
links to Wizard and Sabre

started: 1988
scrapped: 1992
spent: \$125M

- Second system
- Very dull tools (machine language)
- Bad-news diode
- See CACM October 1994, for details

Saltzer, 12/29/99, slide 11

Advanced Logistics System

U.S. Air Force
Materiel and transport
tracking

started: 1968
scrapped: 1975
spent: \$250M

- second system effect

Saltzer, 12/29/99, slide 12

SACSS(California) State-wide Automated Child Support System

Started: 1991 (\$99M)
"on hold": Sept. 1997
Cost: \$300M

- "Lockheed and HWDC disagree on what the system contains and which part of it isn't working."
- "Departments should not deploy a system to additional users if it is not working."
- "...should be broken into smaller, more easily managed projects..."

Saltzer, 12/29/99, slide 13

Taurus

British Stock Exchange

Share trading system

started: ?
scrapped: 1993
spent: £400M = \$600M

- "massive complexity of the back-end settlement systems..."
- delays and cost overruns

Saltzer, 12/29/99, slide 14

IBM Workplace OS for PPC

Mach 3.0 + binary compatibility with Pink, AIX, DOS, OS/400 + new clock mgt + new RPC + new I/O + new CPU

Started: 1991
Scrapped: 1996
Spent: \$2B

- 400 staff on kernel, 1500 elsewhere
- "sheer complexity of the class structure proved to be overwhelming"
- big-endian/little-endian not solved
- inflexibility of frozen class structure

Saltzer, 12/29/99, slide 15

Tax Systems Modernization

U.S. Internal Revenue Service, replaces 27 aging systems

Started: 1989 (est.: \$7B)
Scrapped: 1997?
Spent: \$4B

- all-or-nothing massive upgrade
- government procurement regulations

Saltzer, 12/29/99, slide 16

Advanced Automation System

U.S. Federal Aviation Administration

replaces 1972 Air Route Traffic Control System

started: 1982
scrapped: 1994
spent: \$6B

- changing specifications
- grandiose expectations
- congressional meddling

Saltzer, 12/29/99, slide 17

London Ambulance Service

Ambulance dispatching

started: 1991

scrapped: 1992

cost: 20 lives lost in 2 days of operation, \$2.5M

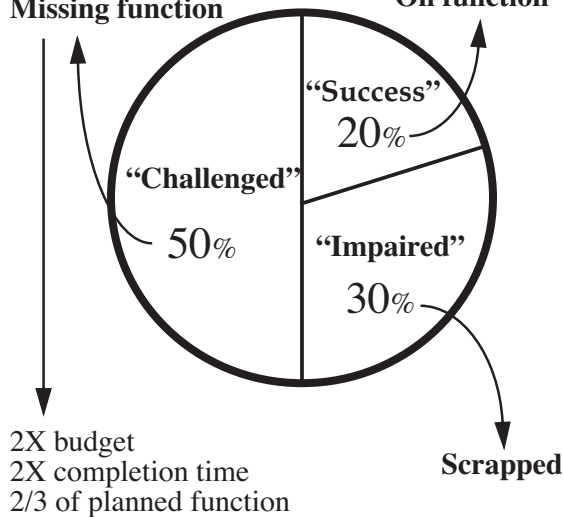

- unrealistic schedule (5 months)
- overambitious objectives
- unidentifiable project manager
- low bidder had no experience
- backup system not checked out
- no testing/overlap with old system
- users not consulted during design

Saltzer, 12/29/99, slide 18

1995 Standish Group Study

Over budget
Over schedule
Missing function

On time
On budget
On function

Saltzer, 12/29/99, slide 19

Recurring problems

- Incommensurate scaling
- Too many ideas
- Mythical man-month
- bad ideas included
- modularity is hard
- bad-news diode

Saltzer, 12/29/99, slide 20

Why aren't abstraction, modularity, hierarchy, and level definition enough?

- First, you must understand what you are doing.
- It is easy to create abstractions; it is hard to discover the **right** abstraction.

(ditto for modularity, hierarchy, level definition)

Saltzer, 12/29/99, slide 21

Fighting Back: Control Novelty

Sources of excessive novelty...

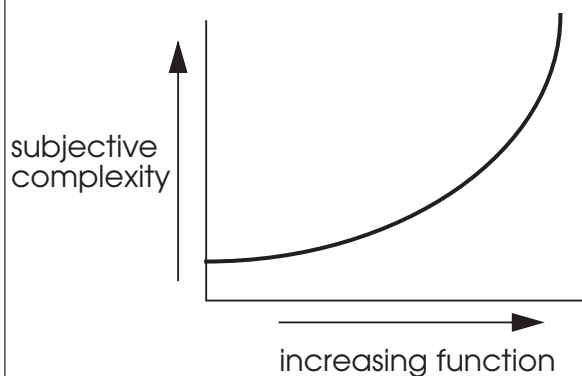

- second-system effect
- technology is better
- idea worked in isolation
- marketing pressure

Some novelty is necessary; the hard part is figuring out when to say **No**.

Saltzer, 12/29/99, slide 22

No Hard-edged barrier—

it just gets worse...

Saltzer, 12/29/99, slide 23

Fighting Back: Control Novelty

- Something simple working soon
- One new problem at a time

Saltzer, 12/29/99, slide 24

Fighting Back: Feedback

Design for Iteration, Iterate the Design

- Something simple working soon
- One new problem at a time
- Find ways to find flaws early
- Use iteration-friendly design
- Bypass the bad-news diode
- General: Learn from failure

Saltzer, 12/29/99, slide 25

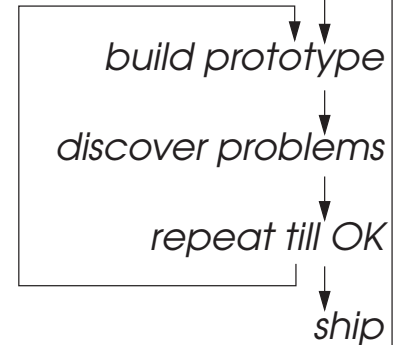

Brooks's version:

Rationalism

vs

Empiricism

(stolen from Brooks, 1993)

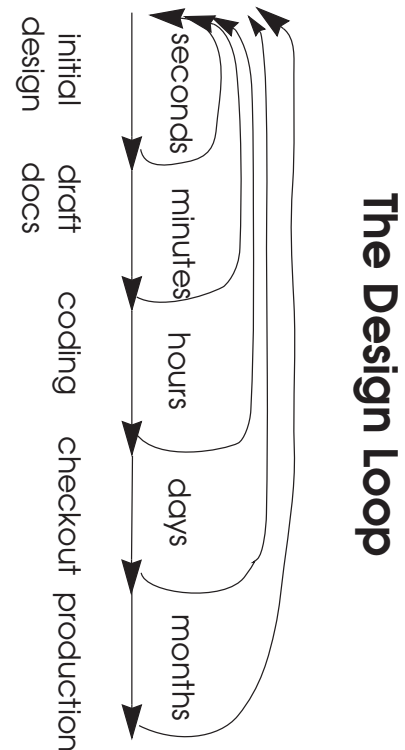

Saltzer, 12/29/99, slide 26

Fighting Back: Find bad ideas fast

- Understand the design loop
- Examine the requirements
“and ferry itself across the Atlantic”
(LHX light attack helicopter)
- Try ideas out—but don't hesitate to scrap them

Requires strong, knowledgeable management

Saltzer, 12/29/99, slide 27

Saltzer, 12/29/99, slide 28

Fighting Back: Find flaws fast

- Plan, plan, plan
- Simulate, simulate, simulate
- design reviews, coding reviews, regression tests, performance measurements
- design the feedback system
e.g., alpha test, beta test,
no-penalty reports,
incentives &
reinforcement

Saltzer, 12/29/99, slide 29

Use Iteration-friendly design methods

- Authentication logic (BAN)
- Alibis (space shuttle)
- Error classification (Lampson)

General method:

- document all assumptions
- provide feedback paths
- when feedback arrives,
review assumptions

Saltzer, 12/29/99, slide 30

Fighting Back: Conceptual integrity

- One mind controls the design
 - *Reims cathedral*
 - *Macintosh*
 - *Visicalc*
 - *SunOS*
 - *X Window System*
- Good esthetics yields more successful systems
 - *Parsimony*
 - *Orthogonality*
 - *Elegance*

Saltzer, 12/29/99, slide 31

Obstacles

- Hard to find the right modularity
- Tension: need the best designers—but they are the hardest to manage
- The Mythical Man-Month

Saltzer, 12/29/99, slide 32

Fighting Back: Summary

- Control novelty
- Install Feedback
- Find bad ideas fast
- Use iteration-friendly design methods
- Conceptual integrity

Saltzer, 12/29/99, slide 33

Admonition

Make sure that none of the systems **you** design can be used as disaster examples in future versions of this talk.

Saltzer, 12/29/99, slide 34
